Then its a good thing that the Germans and Japanese only captured
dittyboppers in WWII, otherwise these POWs would not have been able to
tap out messages.

You guys are rediculous. Absolutely.

You're WRONG! No-Code Techs and Extra-Crispies are NOT the reason 73 magazine is out of business.

Britney Spears is to blame. Ever since the "Baby One More Time" video, Britney has been working tirelessly to corrupt all 6 billion members of the human race by exposing her midriff. If Britney hadn't tied up her shirt in the "Baby One More Time" video, the Good Old Days of ham radio would still be with us. :)

CQ, CQ, CQ baby one more time!

Amateur radio occupies a unique spot in the world of radio communications in that it is the only service that has the capability to furnish near-instant communications anywhere people reside or travel with radio equipment - Communicatiosn of the most widely divergent types and modes. It's as widespread and common as the civil population.

Thus we are the communications of last resort for ubiquitous, anytime, anywhere, any method communicating under the most or least extreme circumstances- it all depends on the cirtcumstances. When we are needed we respond with everything we have. And that includes the most basic means of radio communications, radiotelegraphy - if we have personally developed our skiis so that we have what it takes to do it. Few beginners anywhere have the depth of knowledge to realize the properties and potential of being personally equipped to communicate using Morse code over radio - plenty of technical types have the same problem, witness your own case. It takes the exposure of the code test for licensing and the required learning involved to get past that point.

When a techie like you demands the withdrawal of operator qualification within the ARS such that "it makes absoultely no difference whether or not radiotelegraphy continues to exist since it is only a casual, less than useful method of communications", then what that tells me is that
you have an extremely serious flaw in both your technical qualifications and your personal psyche. The latter conclusion stems from the known fact that you chose to allow a test for Morse qualification to stymie you as an active HF ham for all those years.
Even if you had some actual problem with learning morse code, a great many others with such problems have asserted their will and gone on to master the beast. Frankly it hasn't been all that easy for me, either. Sorry you just couldn't do it. That in no way justifies your jihad against the code, nor the code test.

And further - If the FCC was still the organization it once was, and was set up to be, we wouldn't be having this discussion - there would never have been any question about whether or not a code qualification was appropriate for ham radio.

Should they approve the BPL fiasco, the evidence will be complete - they no longer are an independent entity, clearly being easily swayed by pressures which once no one would have dared exert, and SHOULD be replaced by something at least marginally effective at carrying out its mandate.

So you assert that the usage of Radiotelegraphy is just mechanical
skill. Any half-way accomplished radiotelegrapher knows that isn't so.

Well, you have clearly shown that, contrary to your posts above you
know so very little about Morse on radio that you have no business
whatever elaborating on its properties.

No one here who actually is in any serious way proficient will
believe you for a minute when you state that you "once we up to nearly
20WPM".
It's simply an untruth. You insisting it's a mechanical skill proves it.

I dunno, Steve... I downladed a 46megabyte file from Germany last
week and it only took about 5 hours with my snailpace dialup.(no
broadband available here) Seems the website has a lot to do with how
download speeds. Or maybe I just lucked into a good net route. It never
even flinched during the entire process. Normally I would lose the link
after a time.

Good idea really, with the PDF subscription. I'll have to take a look at
Monitoring Times site.

Thats been my point all along. There is nothing to stop this downward trend, once we got started its just a matter of time.
Karl thinks hes going to jump up and scream that the Writtens have to stay and the FCC is going to say OK. Karl I hate to be the barrier of Bad news, but all your complaining and reasons you have used to stop CW testing, are about to be thrown back in your face as far as the written. Then maybe you will see the light.

Jim, you're talking to a post. NCI thinks they've got what they want
now and their heads are firmly buried in the sand to any issue beyond
killing off the code test. Nothing will dull their premature euphoria.
So now we'll see if the adage "be careful what you ask for" will apply.

Careful, Dick. The last time I used that adage, I was accused of making a "veiled threat." Although I doubt if we'll be hearing any NCTA's on the bottom of 40 anytime soon. BTW, my desk mic's been packed away to make room on my desktop for my log/notebook.

> the internet.
I never said anything about transferring the entire band.
At this early stage, I'm only talking about streaming
about 25 KC of any band at any one time.
I'm limiting it so people can use the hardware they already have.
But the concept is "scalable" to larger bandwidths.

> If the reason is simply to avoid the local noise problems due to
> BPL/PLT/PLC...why not simply run the
> transmitter manually from home and monitoring the band using a remote
> receiver at a quiet rural site...
Avoiding BPL is only one aspect of very many.

I guess I wasn't clear-
For those who like Echo Link and what the rude Mr. Blabham
calls "Amateur Telephone," please have at it. Enjoy.
But frankly, I don't give two cents for using an
Internet chat room to talk over *someone else's* radio.

I restore ancient and military radios to original condition
and I want to talk on *them.* Some of them aren't even
capable of being used on ham bands. You'd be surprised;
there's a lot of us out here. With this system, like minded
people can use these radios to QSO completely legally.
If we wanted, we could have a real spark-gap to spark-gap QSO
with crystal detector receivers- in fact,
a whole bunch of such stations in a net-
because we are literally on our own, private ether.

Here's another:
I live in an apartment; I can't have an antenna.
My neighbors have strict restrictions; they can't have outside antennas.
If I use this system, I don't NEED an antenna.
Nor do I need a big, power-hungry amplifier.

Here's another (For Peter's sake):
I love listening to shortwave radio. The power
company installs BPL, and now all my carefully-tended radio
will say to me is: "BSSSSSSSSSSSSSSSSSRRRRRRRRRRRRRRRRPPPPPP!!"
Do I give up, put my favorite radio on the shelf and listen

to them on the Internet "phone?" Hell, no.
I log into a server that's streaming the 31 meter band in chunks
of 25 KC from a quiet location in Itchyarmpit, Idaho.
I pipe that into my V.S. transverter and into the antenna
connection of my radio. Once again I have evenings of
enjoyment listening to Radio Gabbabootoo.
If I want to hear Radio Binga Boinga
and the five other stations around that frequency,
I select the correct stream and enjoy.

I'm not an electronics engineer, guys- just a tinkerer like most of you.
I don't know "47th Order IMD products" from beans,
nor do I know all your wonderful engineering reasons why it won't work.
All I know is I built the simple circuits and it DOES work.
The fact that it's still crude is actually a big plus,
since it opens a new field in which the average,
none-genius amateur can do some meaningful work,
and that's something we haven't had in awhile.

The point is we are using our radios, not a blasted telephone.
And I'll say it again: When BPL is activated, if we don't have
a "work-around," there won't BE a hobby.

There's a quote out there somewhere that says any
new idea will always be met with nay-sayers and
hecklers. That's fine- comes with the territory.

If a "religion" is defined to be a system of ideas that contains unprovable
statements, then Kurt Godel taught us that mathematics is not only a religion,
it is the only religion that can prove itself to be one.

And it will. You can even work VK6 from W5 on 40CW with one watt. If
it radiates, it also radiates skywave. Which mnakes this issue one for
WARC as well, bigtime.

I wondered that myself. Take note that it's already been done.

Back in the sixties, there were a number of pseudo-academic articles
that appeared in CQ in the April issue, I think under the same pseudonym.
There was one about using phone lines for amateur radio, complete with
"DXpeditions" to exotic countries. It was voice, but it had an odd
similarity to the internet. I can't remember, though, if this was in
the early sixties, my guess 1964, or the late sixties, likely 1968.
It's not like therre were a lot of April issues in that decade, so someone
with a complete set (and in order) could check. They threw in some archive
photos, and plenty of official sounding titles and committee names, so
it came across really well (unless you got suckered).

>
> "Repeaters" came into being around 1940 in the US military.

Incorrect!

In 1932, W1AWW and W1HMO set up an *amateur radio* repeater near
Springfield, MA on the old 5 meter band. This repeater listened near
60 MHz and transmitted near 56 MHz - inside but near the limits of the
old band. Amateurs from Boston to the Berkshires could communicate
through the system. It used AM but was clearly a repeater.

> They
> were known as "radio relay" then and for several decades afterwards.

The 1932 *amateur radio* system was referred to as a "Duplex Phone
Radio Relay".

It was written up in QST.

(long boring irrelevant diatribe snipped)

> "Repeaters" are certainly nothing new in
> technology nor are they of amateur radio origin.

1932. Springfield Massachusetts. W1AWW and W1HMO. 5 meter band. AM
voice.

Amateur radio
>

> current laws on RF emission technical standards for the particular
> radio application. Solid-state technology and techniques can be
> remarkably DIFFERENT from vacuum tube technology and
> techniques.

So why should amateurs have to pass tests on any of that?

Why not just have a basic test on regulations and safety, and leave
the rest up to hams to learn on their own?

> >In the intervening years, FCC has trusted me (and almost every other ham from
> >those days who hasn't lost interest) to keep current with amateur radio.
>
> Try reviewing FCC regulations a bit closer, senior.

What's with this "senior" nonsense, Len?

I'm not a "senior". I graduated. And I'm not a senior citizen yet,
either.

What's your point in using such terms of address?

> FCC REQUIRES
> you (and all others) to emit RF WITHIN technical regulations. That
> INCLUDES whatever has become "current" resulting from changes
> since an operator was licensed.

It also is a requirement regardless of whether someone is licensed or
not.

So why should amateurs have to pass tests on any of that?

Why not just have a basic test on regulations and safety, and leave
the rest up to hams to learn on their own?
>
> REQUIREMENT. BY LAW. Enforced by United States peace officers,
> trial and imprisonment possible.

When was the last time a radio amateur was tried, imprisoned or fined
for a violation caused by emitting RF that did not meet with technical
regulations?

> >FCC
> >has renewed almost all of our licenses without question, and we're allowed to
> >use those new modes and technologies even though we've never passed any tests
> >on them.
>
> Lucky you. Now, what was your point (if any)?

Quite simple, really, and you've proved it for me. It goes like this:

Why should amateurs have to pass written tests that include subjects
beyond the applicable regulations and safety for the amateur radio
service?

Why are theory subjects *forced* on all prospective amateurs?

Why is additional testing beyond the regulations and safety used a a
"hazing ritual", "hoop jumping exercise" and/or "federally mandated
welfare program"?
>
> >If FCC trusts us OTs to learn as we go, why not the new folks?
>
> FCC "trusts" (actually entrusts) the VEC QPC to come up with

So? What's your point?
>
> I'll challenge ANY of the old-timers to "learn as they go."

I have.

So why should newcomers have to take all those written tests?

Why can't they be trusted to learn as they go, just like I and so many
others have?

> That's
> what I've done, successfully, during my whole career in radio
> and electronics.

But you never learned Morse code and haven't yet obtained an amateur
radio license. Do you have an obsesssion against tests? It seems so.

> Some of those same old-timers are still anal
> retentive on retention of a morse code test

You're the one whose behavior resembles the referenced body part, Len
;-) ;-)

The subject is written testing, not code testing.

> I'd say
> those anal retentive old-timers are resisting learning because
> they CANNOT learn as they go.

FCC disagrees with you, Len. They trust amateurs (like me, whose first amateur radio license arrived in the mail exactly 36 years ago today) to keep on learning as they go. At least enough to know the current regulations.

Is FCC wrong? They're the "expert agency", remember? FCC is satisfied with how hams keep up with the requirements. Who are *you* to judge FCC and hundreds of thousands of radio amateurs?

What does 'technical' have to do with Morse Code testing and usage?

I do Morse Code on the air because it is FUN, and CHALLANGING, and
EFFICIENT.

Explain what this has to do with 'technical' please.

> >before WW1. Arc transmitters and Alexanderson alternators were two types.
> >Transmitters using tubes were in use well before 1920.
>
> Irrelevant.

No, very relevant. Spark was not the only option before 1920. And
after 1920, there were even more options.

Amateurs pretty much abandoned spark by 1924-1925. Oddly enough, there
was no international treaty requirement for amateurs to be code tested
until 1927.

The first 'broadcast' stations were actually amateur stations. Using
tube transmitters. They do not get the recognition of KDKA and WWJ
because none of them were in operation on a regular, continuing
schedule.

> From ALL the available literature of old-time amateur radio
> prior to 1920,

Have you read *all* of it? I doubt that very much.

1920 is twelve years before you were born, Len. So you weren't there.

> THE OVERWHELMING MAJORITY of amateur radio
> transmitters were of the "spark" type.

Irrelevant. And there's no need to shout, Len. Your words DO NOT
BECOME MORE TRUE WHEN CAPITALIZED!!!
>
> "Spark" transmitters can be modulated SOLELY by ON-OFF KEYING.

That's simply not correct, Len. And you know it.
>
> The sole surviving Alexanderson Alternator VLF RF generator is in
> Grimeton, Sweden, and used once each year for a brief period in a
> ceremony for Televerket, the Swedish government's telecommunication

Irrelevant. But at least not as boring as your usual diversions.
>
> >The practical transmission of voice and music by radio was demonstrated as
> >early as 1906.
>
> ONLY with a rotary alternator with a WATER COOLED MICROPHONE.

No, with spark.
>
> Demonstration only, and then ONCE.

Irrelevant.
>
> >> Since "morse code" was already in practice and was totally
> >> on-off keying, it was adopted as The "radio code."
> >
> >Was that a bad thing?
>
> Point of fact only.

What's your point?

> Do NOT "rewrite" what I wrote.

I asked a question. Is that not allowed? Who made you the moderator?
>
> Morse code was developed for ON-OFF KEYING...on land lines.

Sure. Modern "land lines" (in the form of fiber optics) still use
on-off keying. Even though it's a very old idea.
>
> "Spark" transmitters could communicate ONLY by on-off keying.

Repeating the same misinformation doesn't make it any more correct,
Len.
>
> Morse code was first used commercially for communications in

> system had spread worldwide by 1896.

And your point is?
>
> >> The adoption of a long-existing (since 1844) LANDLINE code
> >> says absolutely nothing about its efficacy in radio communications,
> >> ability to "work through" or much else.
> >
> >Actually, the code used in radio is different than the code used in landline
> >work.
>
> Totally irrelevant to the point.

No, exactly relevant. In fact, prior to 1912 there were at least three
different codes in use in radio. One of the changes brought about by
the Titanic disaster was standardization on the "Continental" or
"International" version, which is quite different from that used in
"land line" work.

> Early primitive radio could ONLY work
> with an ON-OFF KEYING method.

Incorrect.
>
> Despite all the variant dialects of "morse codes," ALL work ONLY by
> ON-OFF KEYING. ALL.

Not true! And there's no reason to shout.

Any version of Morse code can be applied to frequency shift keying or
phase shift keying or a variety of other modulation methods. On-off
keying is simply the most commonly used method for radio purposes.

Would you stop your persistent denigration of Morse code and those who
use it if we shifted (pun intended) to FSK or PSK?
>
> >The efficacy of Morse code when applied to radio has been demonstrated many,
> >many times over the past century-plus. Radio amateurs continue to demonstrate
> >it every day.

> Self-serving emotional exaggeration.

Not at all. A plain, simple fact.

You're the one who gets all emotional and exaggerates, Len. All that
shouting and carrying on in here. Really, one would think you were a
bit more mature by now.

As for self-serving - well, all those long boring irrelevant diatribes
on old military radio sets that you post here.....
>
> Radio amateurs worldwide continue to USE all the modes and modulations

> never considered its use when that radio service began.

And what's your point in all of this?

Do you want amateurs to stop using on-off keying?

Do you want amateurs to stop using Morse code?
>
> Continued USE of morse code modes DOES NOT POSSIBLY ADVANCE
> ANY STATE OF THE RADIO ARTS.

Yes, it does, in many ways. Of course, that doesn't prove that there must be a code test of any kind.

Len, you're so emotionally connected to denigrating a form of keying and a form of communication that you can't see that. You go far beyond wanting to end a test.

> In ANY radio service, including amateur radio.
>
Who are you to judge, Len? You've never used Morse code and you've never been a radio amateur.

Not entirely correct. From what I have read, in '200 meters and down', I believe...it stated that a rudementary form of modulation was attempted by using a loop inserted in the field of the synchronous spark and a carbon microphone.

This is all from memory, so if Lenny has the facts and nothing but the facts I'm sure he will jump in. And Herrrrrrrrrrs Lenny.....>>>>

Actually, Dave, something like this idea was proposed by
George Gilder back when "TV over the Internet" was a hot
topic.

Gilder proposed that the Internet providers simply bring
a fiber-optic cable to one's doorstep and stop there. The
fiber would be "dark". But any light you launched into it
would come out the ends of all the other "dark" fibers -
all over the world. In effect, the Internet would become
an extremely wideband virtual ionosphere for optical waves.
And, of course, at optical wavelengths, there are huge
frequecy bandwidths available, so everybody could have
their own TV channel, or ham band, or whatever. The trick
would be that you had to provide your own optical terminal
equipment to interface to the fiber.

The point is, your scheme isn't as far-fetched as it at
first sounds. I still like the "old-fashioned" iononsphere
for radio propagation. But your observation about the
increasing number of restrictions and interference sources
amateur operators are encountering in pursuit of their
avocation is quite relevant to the current state of affairs.

THE FOLLOWING IS A REPEAT OF AN OPEN LETTER TO THE
CONFUSED OFFSPRING OF MOTHER BRAKOB, REPEATED
HERE FOR PUBLIC EDIFICATION -

==========

Dear Mother Brakob,

Your offspring is once again confused, perhaps suffering from
dittybopper dementia from spending too much time listening to
beeping or seminarian studies of official documents from Newington.

The following is a direct quote from the Special Commemorative
Issue of McGraw-Hill's "Electronics" magazine of April 17, 1980,
page 75, section titled "History before 1930." That issue is 650
pages total, was printed in celebration of 50 years of "Electronics"
magazine.

"The broadcast television that followed two decades later, would,
of course, not have been possible without proper transmitters,
receivers, modulators, demodulars, etc. --or, in other words,
without proper radio. The world had been introduced in the potential
of such a radio system as far back as 1906, when on Christmas
Eve Prof. Reginal A. Fesenden of Harvard University made the first
documented radio broadcast of speech and music. For this feat, he
used a 50-KHz Alexanderson alternator, manufactured by the
General Electric Co. Telegraph operators on ships crossing the
North Atlantic were surprised on the historic night to hear music

coming out of earphones that previously had emitted nothing but dots and dashes. Fessenden modulated the alternator's 1-KW output simply by putting a microphone in series with the antenna of his experimental station at Brant Rock, Mass. It is likely, but not certain, that the microphone was water-cooled."

Mother Brakob, please point out, highlight if necessary with a yellow marker pen, that the transmitter was an ALTERNATOR, not the damped-wave "spark" type your son scribbled in angry crayon. Specifically, an ALEXANDERSON ALTERNATOR. ONE KILOWATT output.

You may wish to give your son a primer on electricity explaining power losses in resistive conductors. That is important considering the microphone used by Fessenden was IN SERIES WITH THE ANTENNA CARRYING CURRENT SUFFICIENT FOR ONE KILOWATT RADIO FREQUENCY POWER OUTPUT.

Best of good luck on that one, Mother Brakob. [you are going to need it]

LHA

==========

Additionally, there are some basic technical matters which have been totally ignored, such as the "sound" produced by attempting to amplitude modulate a low-audio-frequency-range damped-wave oscillation by speech or music frequencies. That might be quite similar to attempting to amplitude modulate a doorbell buzzer and expect intelligibility from the result.

I would suggest searching a large bookstore for a primer on electricity and elementary radio, such as "Radio For Dummies." That does not appear to be in the ARRL list of approved, official documents but another publisher (possibly 73?) might have it.

Extreme amounts of good fortune on this one now!!!

>FCC disagrees with you, Len. They trust amateurs (like me, whose first
>amateur radio license arrived in the mail exactly 36 years ago today)
>to keep on learning as they go. At least enough to know the current
>regulations.

There is NO evidence of such implicit "trust" in all of Title 47 C.F.R., any radio service.

The Commission is NOT chartered or organized to be a promoter or booster or provider of emotional sustenance for radio operator license grantees. Radio serivce regulations of ALL radio serivices do not expect emotional, nurturing "trust." Regulations REQUIRE obeyance to the LAW. Disobediance to the law will result in possible arrest, confinement, equipment seizure, and monetary loss.

Regulations, the LAW, requires ALL involved to be cognizant of ALL changes which alter relevant LAW. That applies to ALL involved regardless of their total time of involvement.

No emotional-level "trust" is involved. ALL are EXPECTED to obey the EXISTING law and ANY changes in that law as it occurs. That is basic to ALL LAW.

The Federal Communications Commission was created by the United States Congress through the Communications Act of 1934. That act of Congress did NOT specifically center on amateur radio nor did it give any special dispensation in any way to radio amateurs. ALL civil radio services (non-government, non-military) in the United States are regulated by the FCC. Regulation of radio services does not involve "trust." It involves expectation of obeyance of regulations. Failure to obey regulations will result in governmental action to punish offenders. All involved with any radio service activity are governed by regulations applying to that radio service. That is the law. For all.

Try not to redifine basic law or governmental regulation...or attempt coloring and distortion of personal activities with emotional sugar-coating of artificial sweetener in a false claim of personal or like-group dilligence
and responsibility.

Try to stay within one light-year distance of the subject thread instead of misdirecting into personal pettiness of perceived pompousness through false claims.

Part 5 licenses are not "hobbiest" licenses, so the above does not
apply. These licenses are issued to manufacturers, inventors,
researchers, and students to experiment with new radio technologies,
new equipment designs, characteristics of radio wave propagation, or
new service concepts related to the use of the radio spectrum. Special
call signs (which look like amateur calls) are from the block K(or
W)x2Xyy. For example, KA2XYZ or WB2XYZ. The "call area" numeral is
always "2" and the letter following the 2 is always "X". My company
has 4 of these licenses related to 4 different products in
development. Rules regarding their use are very strict.

That's if a religion is defined as such, but that isn't the case in the real world. Mathematics has never been used to suppress people the way that religion has been used, and continues to be used today. (although a college student that has flunked calculus and can't graduate might not think so)

So, as with morse code testing, there are a few that hold onto it like a religion.

David,

Your idea is certainly technically feasible, and would provide a way for folks to continue to 'use' obsolete radio equipment in a post-BPL era. Similar in many ways to the micro AM transmitter that I use to broadcast old-time radio programs to my antique radios, for demonstration purposes.

Somehow, though, it wouldn't be the same. DX-ing and shortwave listening are, for me, pursuits which are made interesting by the sheer randomness of long distance radio communication. Things like building a better antenna or tuner, or waiting for the window to open to that country in order to catch an elusive transmission - that's where the fun is!

Internet communications, however, are carried over the same high-reliability global networks as telephone calls. From my keyboard, I can DXCC in probably under half an hour - which would be a very unfulfilling task, given the certainty of the medium. And that's why I have no interest in some of the existing Internet/Amateur Radio interfaces, such as IRLP - sure, I can talk to some guy over in England on my 5 watt 2-meter HT using a local repeater and dialling an access code to his local repeater - but it isn't DX, its more like a telephone call to a random party at the destination over the Internet. More like using VOIP to call a pay phone in England, then talking to whomever answers. To me, that ain't radio. It's a phone call. Nothing more.

Your proposed interface would provide a way to simulate real QSOs on the old equipment - but it would not be 'real'. Not much different, really, than building a Telco interface for the radio, dialling up the far end, and pretending to have a radio QSO using the mike and speaker instead of the handset. A radio simulator of sorts, with a real boatanchor configured like a speakerphone at each end - but just a simulation nevertheless. Not a true radio QSO. I could wire up my electric pencil sharpener with a mike and speaker, and establish a QSO over the Net with somebody on an ARC-5. That don't make it a radio, though!.....but it would look kinda cool ;)

Some will find this interface quite acceptable - if conversation with others is what the hobby is about for them, this will provide a nostalgic way to continue to QSO with familiar radio equipment. 'Whatever floats their boat'.

For those of us who chase DX and foreign broadcasts through the ether or thrive on overcoming technical obstacles, however, I suspect that our interest would not be held for long by such an interface. Just like piping 1941 Jack Benny programs to my AK-55 - cute, but it doesn't make it seem like it's 1941. Great for demonstrating the set to guests, though - after half a minute or so, their interest is dissipating and the AK is switched back off.

If BPL becomes a reality, my HF gear will be going up on the shelf with the other old radio equipment - to make room for the satellite and moonbounce equipment that will take its place.

YMMV, of course...

Before I retired I was a field engineer working with a statewide public safety organization which uses low band VHF for base to car communications statewide, and that system is still virtually as I left it nearly 10 years ago. I have learned that they are aware of the BPL docket and filed in opposition, and have some idea that it will impact their communications, but I wonder if they have a clear view of what looms should BPL be widely implemented. While working I spent considerable time on RF noise issues, and I am rather sure that such a radio system cannot coexist with BPL.

What happens is that when the noise intererence reaches a certain level, in a FM receiver the limiter saturates, and even a strong on-channel signal will not cause the squelch to open. The reciever remains quiet, and the call is unanswered.
I was able to locate one troublesome noise source which was reported as repeater trouble in that the repeater would ocassionally go quiet in mid-transmission when a car was calling in. By the time I would drive the substantial distance to the repeater, a thorough checkout found no problem with the repeate equipment whatever. After several fruitless trips and attempts to find the trouble, I finally happened to be onsite when the trouble appeared, and it was all limiter saturation. Looking around outside while the noise was present in an attempt to spot a source in the local rural area, I soon found it- an arc welder in a shop several hundred yards away. When the welder was in use, the arc caused noise that saturated the receiver limiter, effectively shutting down the repeater. We relocated that repeater to a more isolated site where it still functions as intended.
That example is but one case. BPL will, following power lines, also follow roads and streets since power lines follow streets and highway/road rights of way everywhere - the same places where police and highway patrol units'communications are active. The interference issue

simply WILL cause something drastic to be implemented, what I don't know. If common sense has anything to do with it, BPL will be sent packing. Widesp[read implementation of BPL spells the end of lowband VHF use by public safety organizations. And with states' budgets in the deflated condition they are in most places, the funding will not be available to replace those systems in the forseeable future.

I just called a former co-worker who is still working, and asked him if the organization knows that there is a BPL test site in the state. He said they did not. I suggested he might want to pass the word on up the chain so that they might want to send a mobile unit into the test area to get firsthand information on just what the effects might be. I'm also passing along all the info I've gathred here and from other sources. We'll need all the help we can get on this turkey.

In short, I'm coninced that while APCO and others may know
of the BPL docket I wonder if they have a very clear concept of
what it will do to them where low band VHF is used.
For instance, what have you heard from the state of Calorfinia, which is reported to use low band VHF for their statewide Highway Patrol, and has over 5,000 mobile units with no telling how many base stations?
I have heard nothing whatever from anyone there on BPL.

It seems evident that the BPL people are not publishing the existance of these very small test sites any more widely than necessary. So, they won't garner very many,if any, BPL-specific complaints, will they? And they'll be able to say "We must not be causing destructive interference since we haven't generated complaints". Of course limiting the numbers of users in test areas to a very few drastically limits the amount of interference potential. With so few BPL users online there *won't* be much interference caused, thus few or no complaints. Then they will conveniently pass over this fact, and the decision makers won't know the difference.

Someone with clout needs to take them to task with the FCC and force them to use much broader test areas with much more realistic noise levels generated so that a more realistic noise picture can be evaluated. As it stands, they may well get what they want by default.

I don't read these newsgroups too much anymore, but the demise of 73 is something I have to comment on. Basically, the magazine has no one to blame but Wayne Green.

His editorials often had very little to do with amateur radio, except how the ARRL and hams in general have failed to promote the hobby to attract young people. Other than that, Wayne's editorials would praise the latest pseudo-science, conspiracy theory, or any other crackpot idea that came along. The bad part about this is that Wayne would often combine these ideas with things that were tried and true, making it seem, to some, like he knew what he was talking about, and was an authority. Example: He has touted a change in diet and lifestyle to promote a long, healthy life and prevent disease - no argument there. But electroshock therapy with a "bioelectrifier" device to cure cancer and even AIDS? Give me a break!

But in all of his editorials, did Wayne ever ask himself if this was the kind of thing that ham operators were interested in? Did he ever conduct a poll to see what his readers were interested in? Did he do anything to attract new advertisers? My guess is that he probably didn't.

Despite this, I don't think we've heard the last of Wayne Green. The last I heard, he was trying to start a new magazine about living/vacationing in New Hampshire. He'll also probably still make the occasional appearance on Coast to Coast AM.

> Night" on a violin.
>
Interesting fellow, that Fessenden. Besides his work in radio, he
invented the fathometer and held over 500 patents.

Some interesting dates in his early radio work:

1900 - successfully transmits voice radio signal 1 mile

1903 - successfully transmits voice radio signal 50 miles

1906 - (November) Successfully achieves 2 way transatlantic voice
radio communication between Scotland and Massachusetts. (This was less
than 5 years after Marconi's claimed one-way reception of the letter
"S", and over a greater distance.)

1906 - (December 24 & 31) Christmas Eve broadcast of both recorded and
live music and voice from Massachusetts. Signals heard all over North
Atlantic and coastal areas. Inland as far as New York State. Broadcast
repeated New Year's Eve.

Spark and alternator transmitters were used, with power up to 1 kW and
frequencies as high as 100 kHz. At least one replica spark transmitter
based on Fessenden's methods has been built by Canadian amateurs
(Fessenden was Canadian), and successful voice signal operation
demonstrated with a dummy load.

Lots more info available from a number of websites. The Hammond Museum
of Radio has lots of great stuff on him.

> any radio service.

Yes, there is, Len.

It's expressed every time FCC renews an amateur license without
requiring a retest of the licensee.

It's expressed every time an amateur puts a non-certified,
non-type-approved transmitter on the air and uses it legally.

It's expressed every time FCC makes a rules change in the amateur
service but does not require any certification that already-licensed
hams know about the change and will comply with it.

It's expressed in FCC's acceptance of amateurs' use of new modes and
technologies without a lengthy approval process.

It's expressed by the unprecedented freedom amateurs enjoy in choice
of modes, frequencies, power levels, and technologies.
>
> The Commission is NOT chartered or organized to be a promoter or
> booster or provider of emotional sustenance for radio operator license
> grantees.

Sure they are. Amateur radio is lots of fun. That's why I do it.

In fact, on this 36th anniversary of the arrival of my Novice license,
I'd like to thank the FCC for allowing me to have a tremendous amount
of fun and enjoyment on the amateur bands.

> Radio serivce regulations of ALL radio serivices do not
> expect emotional, nurturing "trust." Regulations REQUIRE obeyance
> to the LAW. Disobediance to the law will result in possible arrest,
> confinement, equipment seizure, and monetary loss.

FCC has never done any of that to me. Of course, I've never knowingly
broken any FCC regulations.
>
> Regulations, the LAW, requires ALL involved to be cognizant of

> regardless of their total time of involvement.

Is there a point to all this hollering of yours?
>
> No emotional-level "trust" is involved.

Sure there is. I get a nice warm fuzzy feeling every time FCC renews
or modifies my license, and accepts me at my word that the information
I give them is true and correct. My next renewal is coming up in a few
months - wanna bet FCC trusts me for another 10 years?

I trust FCC and they trust me.

> ALL are EXPECTED to obey
> the EXISTING law and ANY changes in that law as it occurs.

You mean like not bootlegging?

> That is basic to ALL LAW.

Is there a point to your lectures?

I don't think so at all, Dick. K2UNK is one of the most interesting
folks to discuss things with here.

Bill and I are simply having a discussion. We disagree with each other
but there is mutual respect and civility on both sides. He's not
convinced by my arguments and I'm not convinced by his reassurances,
but I'm quite sure he read what I had to say and considered it
carefully.

Frankly, I hope Bill is right and I'm wrong on this, and that we don't
ever have to contend with folks wanting to drastically reduce written
testing.

> NCI thinks they've got what they want
> now and their heads are firmly buried in the sand to any issue beyond
> killing off the code test.

That's the whole purpose of that organization - and we're promised
that it will simply cease to function in the USA if/when there's no
more code test.

When Bill or Carl or Ed or Jon write something here, I take it to be
their own personal view, not that of NCI (in the case of Bill or Carl)
or ARRL (in the case of Ed or Jon) *unless* they specifically state
"NCI policy is..."

> Nothing will dull their premature euphoria.

The fat lady ain't sung yet.

> So now we'll see if the adage "be careful what you ask for" will apply.

Who knows? My concern, however, is still the same:

What reasonable, rational arguments can we make to counter the above logic (against more-than-the-barest-minimum-written-tests)?

Because I still think that sooner, rather than later, that issue will come up. And we better be ready for it.

Everyone should read that KL7CC paper on the AL7FS website. Note what it says about the writtens. Heck, the author is one of the top guys at NCVEC, helping make their policy, and he says in public that he couldn't pass the current *written* exam for the Extra without some serious book study!

--

Who of us here was a ham before November 22, 1968? Let's see - there's N2EY, W0EX, K2UNK, W3RV, K0HB, W4NTI, AA2QA. Apologies to anyone I missed.

Back then, all it took for full privs was 13 wpm code and a ~50 question written test. Has 35 years of incentive licensing made hams "more technical"? If not, why do we need all those written tests?

What say, folks?

Not mine. Not if I can possibly help it.
I can't stop BPL, but I *can* get around it.
And what I'm proposing does not preclude what you want.
Let's say BPL does come to your area, and
all HF sounds like a buzz saw.
In your case, you still have your transmitter there at your house.
You use a remote front end, and stream the portion of the DX band
you want to work from a friend's house out in the quiet country.
The only difference is that your receiver is effectively offset in
location
by a few miles. That isn't going to make finding that weak
DXpedition any less challenging, but it *will* make it possible.
Otherwise, it's give up the ship entirely. There's no need
to give up your enjoyment; You just have to be a little flexible
to work around the problems these numbskulls throw at us.
Afterall- haven't we hams been doing that for a century?
73 Dave S.

>
>Anyone else have the scoop?

Out of curiosity, I linked over to NOAA's website and searched.

Nada, nothing, nyet on that "news" in public view.

Lots and lots of fascinating information on the MANY things going
on at NOAA and its departments. The Commerce Department's
Radio Office doesn't have anything either, nor the NGDC.

Must be one of those "secret" places that only dittyboppers know
about...and go into paranoic fits about...

Ionosonde terminals have been fielded for half a century now and the ionospheric characteristics have been known about and studied for far longer. HF radio communications has been steadily decreasing for decades, is principally used as a backup for all other communications means such as secure digital fiber (DSN) and communications satellite relay. Over a thousand SHARES HF radio stations exist for government agencies and they are converting to ALE (Automatic Link Establishment) which can automatically go to "better frequencies" if the circuit becomes less than good.

About the only thing I can see for HF ionospheric propagation data is the constantly monitored "solar index" applied to standard formulas for predicting MUF. NOAA observes the "solar index" and many other things.

LHA

>after 1920, there were even more options.

How many amateur "radio" stations were equipped with Alexanderson
Alternators, senior?

By your nebulous connection of facts, you could have said that
Heinrich Hertz was the "first VHF op" since he used single spark
impulses in that frequency region.

We are NOT talking "options." I was saying that "spark" transmitters
could ONLY be used for communications with on-off keying codes.

Quit trying to misdirect into other things.

>Amateurs pretty much abandoned spark by 1924-1925. Oddly enough, there
>was no international treaty requirement for amateurs to be code tested
>until 1927.

Irrelevant. The CCITT was not created just for radio communications
nor did any "international (radio) treaty organization" exist in 1896 when
radio was first demonstrated as a communications means.

The Internation Telecommunications Union is a United Nations body.
The United Nations did not exist prior to World War Two.

>The first 'broadcast' stations were actually amateur stations. Using
>tube transmitters. They do not get the recognition of KDKA and WWJ
>because none of them were in operation on a regular, continuing
>schedule.

Irrelevant in any discussion of amateur radiotelegraphy, use or
technology.

This is an amateur radio newsgroup not a place for NAB discussions.

>> From ALL the available literature of old-time amateur radio
>> prior to 1920,
>
>Have you read *all* of it? I doubt that very much.

Prove that I didn't.

Quit trying to misdirect into petty personal problems you have.

>1920 is twelve years before you were born, Len. So you weren't there.

Irrelevant.

YOU were not in existance when I first started professional radio
communications on HF bands.

>> THE OVERWHELMING MAJORITY of amateur radio
>> transmitters were of the "spark" type.
>
>Irrelevant. And there's no need to shout, Len. Your words DO NOT
>BECOME MORE TRUE WHEN CAPITALIZED!!!

Do not be so sensitive to EMPHASIZED WORDS.

Internet text format does not allow case changes or size changes in
type fonts.

>> "Spark" transmitters can be modulated SOLELY by ON-OFF KEYING.
>
>That's simply not correct, Len. And you know it.

What I said IS CORRECT.

Amplitude modulating a spark transmitter has all the quality and
intelligibility of amplitude modulating a doorbell buzzer...almost none.

Show us the scientific or engineering work "proving" that a spark
transmitter can be amplitude modulated with any sort of intelligibility
suitable for communications.

You cannot. There is none.

>> The sole surviving Alexanderson Alternator VLF RF generator is in
>> Grimeton, Sweden, and used once each year for a brief period in a
>> ceremony for Televerket, the Swedish government's telecommunication
>> works. A ceremonial event, not one for any actual communication.
>
>Irrelevant. But at least not as boring as your usual diversions.

The Grimeton Alternator was not used in amplitude modulation, ONLY
in on-off keying.

>> >The practical transmission of voice and music by radio was demonstrated as
>> >early as 1906.
>>
>> ONLY with a rotary alternator with a WATER COOLED MICROPHONE.
>
>No, with spark.

INCORRECT. McGraw-Hill and the staff of Electronics magazine of
1980 disagree with your "learned' opinion.

Please give us a scientific or engineering precis on how a 1 KW
transmitter OF ANY KIND is amplitude modulated by a single
microphone, no active device couplers or amplifiers, of the 1906
era electronics technology.

>> Demonstration only, and then ONCE.
>
>Irrelevant.

No. PRACTICAL. Losses in old-style microphones of early 1900s
used in ONE KILOWATT transmitter aerial circuits would prohibit
hand-held use even with forced water cooling.

>> Morse code was developed for ON-OFF KEYING...on land lines.
>
>Sure. Modern "land lines" (in the form of fiber optics) still use
>on-off keying. Even though it's a very old idea.

Please show all communications work, research or practical, on
communications using GIGABIT DATA RATES prior to 1940.

Please show all communications work, reasearch or practical,
involving glass fiber as a medium of communications prior to 1940.

Digital communications over fiber-optic cable involve DIGITIZATION
of analog signals which may have any form of modulation or
combinatorial modulation such as AM-PM in common modems.

There is NO ON-OFF KEYING used in fiber-optic digital communications
on landlines, sealines, elevated over land, or direct conversion to RF for
microwave radio relay. NONE.

>> "Spark" transmitters could communicate ONLY by on-off keying.
>
>Repeating the same misinformation doesn't make it any more correct,
>Len.

McGraw-Hill, a publisher and perhaps the greatest publisher of text
books in the world today, is my source of information. Prentice-Hall
and Wiley Interscience are up there as strong competitors.

In order to prove your point, you MUST show how a spark transmitter
can be modulated in any way OTHER than ON-OFF KEYING for any
sort of communications.

>No, exactly relevant. In fact, prior to 1912 there were at least three
>different codes in use in radio. One of the changes brought about by
>the Titanic disaster was standardization on the "Continental" or
>"International" version, which is quite different from that used in
>"land line" work.

Irrelevant and petty minutae. The BASIC FORM of telegraphy is
ON-OFF KEYING. Only the on-off patterns, the arrangements of
the "bits" is relevant in discussing "kinds" of coding patterns.

Basic form of telegraphy, wired or by radio, is ON-OFF KEYING>

>> Early primitive radio could ONLY work
>> with an ON-OFF KEYING method.
>
>Incorrect.

YOU are INCORRECT. For the third time, show the work that proves
your correctness.

You cannot.

>> Despite all the variant dialects of "morse codes," ALL work ONLY by
>> ON-OFF KEYING. ALL.
>
>Not true! And there's no reason to shout.

As far as spark transmitters are concerned, those can work ONLY by
ON-OFF KEYING codes for communications.

ON-OFF KEYING with one kind of pattern of character representation
is not different from ON-OFF KEYING using another kind of pattern

of character representation.

>Any version of Morse code can be applied to frequency shift keying or
>phase shift keying or a variety of other modulation methods. On-off
>keying is simply the most commonly used method for radio purposes.

Absolutely true. NOW.

Show your work that "proves" spark transmitters were capable of
communications modulation OTHER than on-off keying.

Feel free to show your work that "proves" rotary alternator RF
generators were ever capable of FSK or PSK telegraphy.

The early radio transmitters were ONLY capable of ON-OFF KEYING
to effect communications.

>Would you stop your persistent denigration of Morse code and those who
>use it if we shifted (pun intended) to FSK or PSK?

Stop your incessant petty pique whining about "persistent denigration"
of morse code or codings.

FACT: EARLY RADIO HAD *ONLY* ON-OFF KEYING AS ANY
MEANS OF EFFECTING RADIO COMMUNICATION. SPARK
TRANSMITTERS WERE NOT CAPABLE OF COMMUNICATIONS BY
ANY OTHER MEANS.

>You're the one who gets all emotional and exaggerates, Len. All that
>shouting and carrying on in here. Really, one would think you were a
>bit more mature by now.

There is no "emotion" in stating basic physics and historic facts
about early radio.

The limitations of Internet newsgroup text formats prohibits change of
type font size or other attributes. Writing in all-capitals is the only
way to EMPHASIZE STATEMENTS, NO DIFFERENT THAN WRITING
LARGE ON A BLACKBOARD in an attempt to teach backward
students certain facts.

YOU are the emotional individual, almost a religious zealot in the
constant highlighting of morse code mode communications in a
non-professional avocational activity, unable to prove any morse
code efficacy or accurate historical data in the much larger world
of professional radio.

>As for self-serving - well, all those long boring irrelevant diatribes
>on old military radio sets that you post here.....

The AN/PRC-119 series of small-unit land and air unit radios in the
US military may have begun to field operationally over a decade
ago but there are now a quarter million of them used by all branches
of the US military. Digital voice, data, in-clear or encrypted, single
frequency or frequency-hopping in 30 to 88 MHz bandspace. May

be used with AN/PSN-11 by simple cable connection for accurate
time update for networking in FHSS mode. Battle proven in Iraq,
Afghanistan, Kuwait, elsewhere.

Quarter million quantity of those radios. Fielded and operational.
Produced by ITT Fort Wayne and General Dynamics Land Division.

The US military DOES NOT USE MANUAL TELEGRAPHY FOR
TACTICAL COMMUNICATIONS PURPOSES TODAY, HAS NOT
DONE SO FOR DECADES.

>> Radio as a communications medium is 107 years old. ON-OFF
>> KEYING of a radio frequency carrier is NOT a new concept nor is it
>> the best for communications.
>
>Who are you to judge? You've never used Morse code, from what you tell
>us.

Stop your petty petulant whining about "one has to use morse code
in order to understand it." Emotional nonsense.

The REST OF THE RADIO WORLD has given up on morse code, is
giving up on it, or never considered it as useful in the first place.
Only amateurs cling to it...on an emotional basis.

REAL ENGINEERS do not have to use everything under evaluation for
judgement of any kind. Aeronautical engineers do not have to know
how to fly aircraft in order to design them. Automotive engineers do not
have to know driving any kind of vehicle in order to design them. The
FCC does not require Commissioners OR staff OR anyone in their
Office of Engineering Technology to "know" all the kinds of radio and
wire communications in order to BE THE ULTIMATE JUDGE FOR
CIVIL COMMUNICATIONS REGULATIONS.

>> Continued USE of morse code modes DOES NOT POSSIBLY ADVANCE
>> ANY STATE OF THE RADIO ARTS.
>
>Yes, it does, in many ways.

Incorrect. Prove your contention by technical proof, not emotionalism
or bias or favoritsm.

>Len, you're so emotionally connected to denigrating a form of keying
>and a form of communication that you can't see that. You go far beyond
>wanting to end a test.

Petulant paranoia from an emotional devotee of old-time radio.

The awful thing about reality is that it exists. All around.

Time and technology in all radio-electronics continues to advance, to
CHANGE. That is reality. That is truth.

The emotional cripples want a stasis, a stopping of change, a refusal to recognize change, a near-complete refusal to recognize any other citizens as worthy of existance in their pet hobby.

Amateur radio is an avocation, a recreational non-professional radio activity. In the USA it isn't about the continual recreation of old days in radio using old standards, old modes, old ethics, old mores...or old rules and regulations that are no longer applicable.

The problem is that some think the above DOES apply, or MUST apply, because that is the ONLY thing they can see, understand, or comprehend.

You have a great deal of work ahead of you in logically, honestly proving some of your contentions and insinuations of others and lack of professional proof of early radio limitations. Those cannot be proved by petulant tantrums or illogical incorrect statements of old amateur mythology.

Get busy.

The PCTA's never have been able to. They quickly deplete thier very shallow pool of "debate points", which are easily refuted and defeated such as the old & dead "it's basic to all radio communication" (that one still makes me laugh)...
and quickly they MUST resort to name calling such as "lamebrained" because they have NO other cards in their hand. They have nothing to lean on. All they
do is either put you on thier killfile list (read: I can't factually support my stand
so therefore i'm going to just ignore you! so there! *nyah!*) or they start name calling. "lamebrain" is one of the new ones; generally the pro code dinosaurs start using "lazy", "stupid" and "moron" interspersed with various vulgarities.

There's another contributing or influencing factor; the internet. The
prevalance
of internet connections & accounts, growing all the time, has offered a new
medium through which information and published materials can be
shared. Just like with the snail mail industry, i'm sure there *has* been a
substantial impact upon the hard-copy publishing industry.

Then again, it shouldn't be surprising that the PCTA crowd doesn't
understand this, that it has gone completely over thier head, as the
mere concept of modernization and progress, along with evolvement,
is totally alien to them, I guess.

Well, we are both in agreement on that Len.... it doesn't take
long to see what the PCTA crowd is *really* about and after;
just read some of thier posted reasons for keeping the test
around (if you can stand to put up with the intermixed vular
insults and name calling)... one that is just recently being
tabled in here is "if we don't force eveybody to do it, then
they won't want to"... that's a self defeating argument right
there; who would want to drink casteroil that doesn't want to,
and what's more, would forcing it down thier throad make
them become *warmer* to the idea??? And one recently
spouted, before thinking closely to what he was saying I
believe, that they want to "shape the ham community to
what *they* (read: PCTA crowd) WANT it to be.

ahem...

Actually, when you think about it...ANYONE is allowed to design, build,
repair,
align and/or modify ham equipment...it is ONLY the "operate" part that
ultimately requires the license.

> Look at the FCC enforcement logs. Problems due to technical incompetence
are
> very few in the ARS, and those that do happen are not clustered on any

>
> So why do we need all that written testing beyond Tech?

Jim, you keep bringing up what you believe are analogies
to the ode test issue and I'm not gonna play anymore. the
argument(s) fail to convince the FCC and I don't see you
making them to the FCC either. If and when someone attempts to petiton
for the changes you suggest are analogous...then I'll argue further.

Sounds like a perfect article for this coming April's edition of QST
to me :-)

Seriously - you can't be seriously suggesting that vulnerable infrastructure
be considered as a viable replacement for infrastructureless HF
communications?

Again ... perhaps in the April (fools) edition of QST ...

Quit misdirecting with olde tyme raddio lore.

Come up with the way anyone can make a spark transmitter
amplitude modulated for intelligible voice or music communication...
using a microphone in the antenna circuit of a 1 KW transmitter.

Come up with the way a spark transmitter suddenly turns into
an Alexanderson Alternator whenever it is brought up in an amateur
radio newsgroup.

Come up with the engineering expertise that proves a McGraw-Hill
periodical was "in error" in 1980.

No luck on that one, now...you are into the Twilight Zone.

Jim ... I am not going to waste time, energy, and bandwidth
debating the elimination of written tests, with you playing
"devil's advocate" for elimination thereof ...

I do not, and never will support the elimination or watering down
of the written tests. I have stated over and over again that I
personally feel they could be made better (where "better" and
"more difficult" are not necessarily synonymous ...).

I don't mean to come across as condescending, but your attempts
to equate Morse testing's irrelevance to the written tests in an effort
to support continued Morse testing is something I'm getting tired of.
And I'm not going to play that game.

Otherwise, 73,
Carl - wk3c

1144. Re: Opposing BPL

Newsgroup: rec.radio.amateur.policy

Dick,

I'm not at all sure who uses what spectrum in the areas where they are testing BPL, but I'd bet coffee for a week that those folks studied the situation carefully before proceeding. Where did they test (I don't know of all areas and I'm asking a sincere question)? The "promise" of BPL is to serve areas that are not served well by cable or DSL. Did they test a fairly substantial area in the country where they could demonstrate far-flung connections to the BPL, or did they test in densely populated areas that are already served by various broadband connection (where fire, police, emergency, etc. are very likely not on low band VHF)? Also, FM broadcasting is usually located near large population areas (since signals tend to die off pretty quickly after 40 or 60 miles). This means that if you have BPL in a city, it is unlikely that residents will experience capture effect on the FM receivers since they will be getting *huge* signals on their FM receivers. I note the "neon sign" comment in the thread. Neon signs are usually found in cities. Those test sites are likely located either in a city or in an area where the money interests already checked the FCC site to ensure no low band VHF use by police, fire, ambulance, etc.

Any thoughts on this, or am I crazy?

About how long did Wayne threaten a "nude cover" (including some
teasers...)?

Jim,

This old strawman of yours is getting shopworn. Since it's nearly Halloween, just prop him up next to a pumpkin and see if the children are impressed when they come for tricks and treats.

The purpose of the written test is to determine if an applicant is qualified to play on our RF playground without hurting themselves or innocent bystanders, without straying into nearby industrial and military places, that we know how to share nicely with other players, and that we recognize practices and conditions which will trash up the playground.

No, it is not. Fessenden demonstrated that it could be done as early as 1900.
>
> Amplitude modulating a spark transmitter has all the quality and
> intelligibility of amplitude modulating a doorbell buzzer...almost none.

How do you know? Have you ever done it? Ever actually heard what
voice-modulated spark sounds like?

Fessenden was able to get a modulated spark system to work over 50 miles in
1903. That's documented a number of places, such as the Hammond Museum of Radio
website.
>
> Show us the scientific or engineering work "proving" that a spark
> transmitter can be amplitude modulated with any sort of intelligibility
> suitable for communications.
>
> You cannot.

Yes, I can.

> There is none.

Do a google search, if you know how. There are websites with recordings.

Yes the quality is poor but it does work. Fessenden was able to use it for communications. 100 years ago and more.
>
>>> The sole surviving Alexanderson Alternator VLF RF generator is in

>>
>>Irrelevant. But at least not as boring as your usual diversions.
>
> The Grimeton Alternator was not used in amplitude modulation, ONLY
> in on-off keying.

Actually, many Alexanderson Alternators were FSK machines to avoid varying the load on the driving motor. A keying relay would change the excitation of the poles so that the output frequency was halved during "key up" times. Of course only the resulting "mark" signal was listened to in the receiver.
>
>>> >The practical transmission of voice and music by radio was demonstrated

Give me a work order number to charge my time to...

Fessenden did it. Read his papers.
>
>>> Demonstration only, and then ONCE.

Not only once. Fessenden had two-way transatlantic voice communication (Massachusetts to Scotland, a longer path than Marconi's 1901 "S" reception) working repeatedly by November of 1906. That's documented.

In addition, the Christmas Eve broadcast was repeated on New Year's Eve.

Why?

> Digital communications over fiber-optic cable involve DIGITIZATION
> of analog signals which may have any form of modulation or
> combinatorial modulation such as AM-PM in common modems.

And the result is...a digital signal which is on-off keyed. The light is turned
on and off at a very high rate of speed. That's not PSK, not FSK - it's OOK.

> There is NO ON-OFF KEYING used in fiber-optic digital communications

I didn't write that quote. You did. Perhaps you know you're not qualified to
judge others but hate having that pointed out.

But you avoided my question. Who are you to judge?

> Emotional nonsense.

That's a good description of your posts, Len.
>
> The REST OF THE RADIO WORLD has given up on morse code, is
> giving up on it, or never considered it as useful in the first place.
> Only amateurs cling to it...on an emotional basis.

Is that bad?

Here's a clue for ya, Len: "Amateur" comes from the Latin for "love". It means
to do something for the love of the thing itself.

Love is an emotion. Amateurs do what they do for emotional reasons. Because
they *like* doing those things.

Your diatribes basically consist of telling people what they should and should
not like. Guess what - that doesn't work.

> REAL ENGINEERS do not have to use everything under evaluation for
> judgement of any kind. Aeronautical engineers do not have to know

No, it's correct.

> Prove your contention by technical proof, not emotionalism
> or bias or favoritsm.
>
Turn on your spellchecker before I start mistaking you for Bruce.

It's very simple, Len.

The simplicity of Morse code permits new ideas to be tried out more easily and with less development than with most other modes.

For example, when N7VE wanted to see how good his mixer design was in a practical application, he built a Morse code transceiver with it. His design compared very favorably with more complex superheterodyne designs but used fewer parts and less power. And he had a functioning device, not a lab specimen, to test out under real-world conditions.

To top it off, the design can be duplicated by amateurs without a lot of tools or test equipment, permitting field trials of his design by any number of investigators.
>

Excellent point! However, in the interests of strict correctness, note that equipment which is manufactured for sale has to meet certain certification requirements which licensed hams ar exempt from. In the case of RF power amplifiers, a licensed amateur can homebrew things no manufacturer can legally sell.

>> Look at the FCC enforcement logs. Problems due to technical incompetence

The code test issue will be decided by FCC one way or the other, sooner or later. I'm not worried about it, they'll decide whatever they decide.

My concern is simply that if someone or some group starts using the same arguments against much of the writtens, they're going to be difficult to defend.
Reading the KL7CC article, and seeing the recent drop in new Techs that correlates exactly to the new Tech Q&A pool got me thinking, that's all.

>You are talking about it, I'm done playing. No reason to do
>so.

OK, fine. As I pointed out to W0EX, we disagree about lots of things.

I hope you are right about it not becoming an issue.

>When I see something that looks like an NPRM, I'll comment.

Me too! Hopefully, FCC will agree with us.

Carl, It isn't about you. You know a bit about politics it is obvious. But you are falling prey to a common malady among politicians.

It isn't about you. You don't support the watering down of the writtens. That's great, and I agree and support you in that effort 100 percent. I also support you in your BPL efforts. 100 percent again.

But there are people out there who agree with part of your premise about the CW test, but not all of it. They don't think that removing the CW Morse test is enough. They want more. (or less if you wish to look at it that way) Right now, things are going their way. Maybe not for your reasons, but they like what they see happening.

The political spectrum is filled with all kinds of people, and what happens in amateur radio and the world depend on which way the currents are running. Right now, the currents are simply not running toward a more technically inclined ARS.

Want to get the Present FCC administration's ears to perk up? Phrase it in "regulatory" terms. Talk a bit about how modern radio's don't require the level of regulation that used to be needed for proper operation. I'd bet that would get them listening. I'm glad you support the continued testing of ARS candidates. You may need to lend your good name to some pretty robust efforts to retain the tests soon.

All apologies

- Mike KB3EIA -

This calls to mind an article in one of the ham mags 20 to 30 years ago
where
someone planted a battery operated transmitter and morse code generator
that would key up at random for a few seconds every few hours. It would
say "<hated person's callsign's suffix> SUX" Suppose he didn't like me, so
it would then be "ISE SUX" The frequency was on the input of a popular
repeater somewheres out West, like Arizona. Mountains in the area shielded
the rogue transmitter's signal from inhabited areas; only the repeater could
hear it. It was planted in a wildlife preserve, antenna partially
hidden in a
thicket of local weeds, and battery and transmitter buried. They had to get
permission from forest rangers or such to do a fox hunt to find it.

My point is that someone used code to say naughty words.....

Dick you bring up good technical and adminsitrative examples. My career too is in land mobile (public safety and railroads) and while there is plenty of trunking and digital taking place above 450 Mhz, there is also plenty of low and high band activity, and always will be.

The ARRL seems to be doing a good job studying the BPL issue and informing the ham community, but the public safety, industrial, business, government, etc., users will have a louder and more credible voice (safety of lives & property, commerce, homeland security, etc.).

I am wondering what the ARRL is doing to form coalitions with other (non-amateur) stakeholders, and to build concensus that has a loud and effective enough voice with the Commission and with Congress. Politically and techincally, the ARRL and/or the amateur community cannot stop this on their own.

With a less pompous start, you might have gotten some more favourable
comments :-).

The problems with high noise levels is of course real for many radio
amateurs and shortwave listeners living in urban areas.

For a few years there have been remotely connected receivers connected
to the internet which can be remotely tuned to any desired frequency
and the audio is transferred over the net. The problem is that only
one user at a time can control the receiver.

However, in order to create a shared receiving station in some quiet
location without huge hardware duplication for each user, would
require that entire bands are digitised (with dynamic range problems)
and the whole band is then transferred to each user. Some DSP software
running in each end user computer would then do the filtering and
detection. If some kind of multicasting is used from the receiving
site, this would give an unlimited number of shared user for each
band.

The other approach would be to digitise the whole band and run
multiple virtual receivers in software, individually controlled by the
remote user, producing a baseband signal, which is then transferred to
the user. The number of simultaneous users would be limited by the
number of virtual receivers (limited by the hardware computational
power) and the throughput of the shared receiving station internet
connection, requiring 10-100 kbit/s for each active user.

A shared remote receiving station is not very compatible with
transmitters on the same site, so the users would have to use their
transmitters at home or pool a number of transmitters on a separate
transmitter site, at least a few kilometers from the receiving site.

Of course the simplest, but not always the most cost effective solution is to have a summer cottage with a broadband connection in some quiet rural location. Move your station to the cottage and when not at the cottage, connect a remotely controllable transceiver to a computer (audio in and out, serial data and PTT) and control the station from your urban home. A remotely controlled antenna rotator also helps a lot. In this way you do not have to suffer from noise, antenna restrictions and neighbours complaining about interference:-). Using some watchdog timers is a good idea, in case the computer or internet connection crashes.

Carl, Unless Stinson has a pre-arranged contract to publish in
any periodical, his submission is no guarantee of acceptance
for publishing. His manuscript has to go in the "slush pile"
with all other submissions for consideration by editors.

Manuscript-wise, it may be that QST isn't getting much and any
submission is ripe for page make-up in a future edition. Or, it
could be that QST will actually consider the article as a viable

alternative to QRM-killed-by-BPL HF ham bands...which are not yet plagued everywhere with BPL garbage. We will all get some insight to QST editors' concept of the future if this article gets printed.

However, October and November manuscript submission dates would be about right for first-of-April, 2004, issues. :-)

Care for a PDF copy of the infamous/famous Signetics "Write Only Memory" ad of years ago? :-)

Oh, absolutely. I'm certainly buying fewer magazines today exactly because of that. I can usually find the information I need much quicker, and much more fully, on the internet. That obviously reduces the value of paper publications. However, I still buy just about as many books, though the typical content of that has changed (software manuals instead of leisurely novels).

I can understand their position to some extent. I'm not exactly thrilled with all the changes taking place today either. The romance, mystery, and charm, of life is disappearing, slowly replaced by hard facts, technology application, and an almost fanatical rejection of the "old" way of doing things wrapped under the guise or pretense of modernization and progress. With that comes an almost rabid zeal to push anyone opposing that out of the way, without consideration for their thoughts, feelings, or emotional needs. At the same time, many of the changes are not designed to, and often don't, benefit the "old guard," leaving them few reasons to actually support those changes. Many clearly see the efforts to regenerate Amateur Radio (removal of code testing, changes to the license structure, and so on) as just one more example of that process. Of course, when it comes to code testing, very few could claim we're exactly rushing to kill it off - it should have been dropped a couple of decades ago (at least). I obviously don't think we should rush into changes just for change sake, but we clearly shouldn't sit still forever either.

My response to the document "Amateur radio in the 21st century" by Jim Wiley, KL7CC of the NCVEC

>>Will we lose something because we will no longer have the knowledge that all hams can at least understand and send CW, even if very slowly? Maybe, maybe not. You would be surprised at the number of applicants I see that actually want to learn CW - they think it will be fun. Thereï¿½s a novel concept - someone learning a skill because it is fun, not because the government says you must do it.

Yes, there's always a few who want to learn it for the sake of learning a new skill-after all, there is always a small segment of the population who are actually motivated. Some are around these days. I've been in contact with several recently.

>>Obviously, removing the Morse test requirement will make it easier for thousands of interested persons to join our hobby. There are many, who for whatever reason have a real, not imagined, problem with learning the code. Call it stage fright, a psychological block, hearing problems, poor recognition skills, whatever you want; there are indeed those who literally cannot master the code, no matter how hard they try.

Why not call it what it is? Improper preparation to learn, and total lack of dedicated study, and usually the poorest of learning technique for the task at hand. Learning the code isn't difficult, it just requires one to WANT to. Whatta concept!

>> Lazy, you say? Anyone can make it to 5 WPM, you say? They just donï¿½t try, you say? Apparently you have not participated at hundreds of exam sessions. I have. I have seen grown men and women with tears in their eyes, frustrated, angry, sometimes back next time, sometimes giving up on ham radio altogether.

This one is pure nonsense. Yes, I *HAVE* participated in "hundreds of test sessions" over a period of nearly a decade. NEVER did I see any such a spectacale. Yes, I've seen plenty of people fail the code test. For good reason- they didn't adequately prepare to take the test. And the VE code tests have never been difficult, as code tests go, or as they existed under FCC testing. We always gave every considreation possible under the rules, constructed tests to be as easily passable as legally possible. You see, we too, wanted people to pass and become licensed hams. But to show up for a current version 5wpm test and fail in a frustrated tear-jerking session, male or female, is something I never saw, nor even anything remotely approximating that scene. It just never happened, in all my testing years.

What I did see was an elderly gentleman who showed up each test session, loaded with nerves, and he failed 13wpm a few times. Each time, what he got from the testing team was plenty of friendly words of encouragement to keep at it, and welcome, be sure to come back next test session. He did, and on the 8th try he passed his 13wpm test. I am convinced he'd never have made it without those words of encouragment, but never once did he give in to his certain frustration. To fail a 5wpm code test in tears us beyond shamefuhl, both for the examinee and the testing team.

OBTW-- the pass/fail rate of all applicants tested by my team was always almost exactly the national average - two thirds passed, one third failed, all elements. It never varied beyond a percent or two. So I always believed we were doing it pretty well correctly.

>Whereï¿½s the gain in having someone give up?

A better question is WHY would someone who truly wanted to be a ham give up? I can't think of a single valid reason-except that they really didn't want a ham radio license. As a kid of 14, wild horses couldn't have kept me from getting one. For darn sure no code test would, nor did. Is it so different for people today? If so, why? I can't think of a single reason.

>Are you proud that you ï¿½made itï¿½?

Why would anyone who would be a credit to ham radio NOT be proud of the accomplishment of earning a ham radio license?
If not, why do they want to be a ham in the first place? Is it antisocial to be proud of reaching a goal?

>>Can you not find something that another person can do that you would find extremely difficult if not impossible? Could you win the Tour de France bicycle race - even if you trained every day for the rest of your life? Could you invent the Laser? Could you paint the Mona Lisa? Not that painting a work of art or riding a bicycle has all that much to do with radio, itï¿½s just to point out that while you may have been able to master the code with some degree of success, that doesnï¿½t necessarily mean that everyone has the same ability as you.

All that is nonsensical blather having no bearing whatever on ham radio qualification nor testing. More totally inaccurate anologies of the NCI variety.

>> I would argue that the ability to master the code has no apparent connection with how ï¿½goodï¿½ a ham a person is. What we want, I think you will agree, is someone who will respect our traditions, follow the rules, bring enthusiasm and vigor to the hobby, and make a positive contribution.

How about someone who wants to do more than spend ALL their radio time looking into a microphone? The code IS a vital part of ham radio, not just some "hazing ritual" nonsense as so often quoted by the codehating NCI set.

>>So, whoï¿½s to say that mastering Morse code skills makes a better ham?
I would not be so arrogant as to think such a thing.

It's NOT arrogance, it's a valid useful qualifcation. You pander to
the codebashers with this nonsense for curious, hidden reasons.

>> Every time I get to feeling superior, I look around, and guess what?
- - - I can find someone who is better at something, anything, than
me. I can also name several individuals that I think are in one way or
another ï¿½better hamsï¿½ than I, better operators, better engineers, better
at some aspect of our hobby than me. Might that be true with you too?

Well, how about that! We all have different talents and
qualifications. So for that reason, we must totally downgrade ham radio
to the status of stamp collecting. What a blast! And you have the simple
arrogance to call THAT arrogance!

>>Like anything else, when a person finds he or she has a need to use
Morse code, they will learn it .

THAT is truly laughable, particularly so coming from a fellow who
claims to be a code user himelf. Any code user who actually
does use it knows much better than that. You DON'T and CAN'T learn the
code on the spur of the moment, just "when you need it".
What total nonsense!

>>>Will ham radio turn into CB? No, it wonï¿½t. In the first place, CB
is essentially an unlicensed service.

I might remind you that CB was a licensed service, until the outlaws
took it over, realizing that there was nothing an undersized
underfunded FCC could do to stop them. Are you are so uninformed as to
believe that something very similar couldn't happen to ham radio when in
fact it HAS gone well into that direction -as noted by you in this very
document!

>> Secondly, there are still the written exams, and add to that peer
pressure from other hams, and the fact that hams must use call signs,
instead of ï¿½handlesï¿½, and there is just no comparison.

Oh, **HUGE** deal, those question pool writtens and CB handles. The
only thing that has salvaged ham radio in the years since the question
pools and VE testing started *IS* the code test. When that is gone,
there goes the rest of the farm.

>>Will dropping the Morse requirement remove a ï¿½filterï¿½ that keeps out
poor operators, ï¿½CB Radioï¿½ types, scofflaws, and so on? I think not.

I think not, too. Code testing has never been a perfect filter, and
there has always been those who got illicit licenses, even in the days
when FCC gave the tests. There was the Conditional licensing program,
which was widely abused. And there were always ways to get a license
without actually taking ANY test, such as paying someone to go to the
FCC office and take the test in one's place. Yes, that happened, and no
one knows how often. You see, until fairly late in the FCC testing era

no ID was required, just show up at the FCC office, fill out the forms and take the tests. One could put any name and address he wanted on the forms, and that name became the licensee. It wasn't all that difficult, even then. And you KNOW that all VE's properly handled their test sessions, right. FCC enforcement logs show otherwise. So to blandly say that all those HF troublemakers are all code tested hams is simply assuming an invalid conclusion.

>>Listen to 75 meters on any given evening, or 20 meters above 14300 during the day, and all too often what you hear is a cacophony of indecent language, illegal operation, intentional interference, music, poor sportsmanship, you name it. And every one of those characters passed a code test! Whether it was 5 or 13 or 20 WPM, they all passed a test. Some filter, huh?

Better by far than none. At least some majority of licensees were people who actually had interest enough to do it right and stay within the rules and live by some sort of ham's creed. But never all of them, as noted above. And if you don't know that this situation has gotten much worse in the past couple decades you haven't been paying attention.

>> Suppose, just for a moment, that a petition got filed requesting that the FCC make the following changes: Take the present HF Novice bands on 80, 40, 15, and 10 meters and reassign them to voice operation.

How did I know this was coming??? In an age where digital rules supreme, we MUST have more room to yak into a microphone.

>>Move the corresponding phone segments down by the appropriate amount. Change the segments open to various classes of license to fit, and let the new ï¿½Communicatorï¿½ licensees have access to the HF bands in 50 or 100 KHz blocks. For example, and this is just an illustration, 40 meters could end up looking something like this:

7000 - 7025 Extra, CW and data only
7025 - 7100 All classes, including communicator, CW and data only
7100 - 7150 Extra, all modes
7150 - 7250 Extra and General, all modes
7250 - 7300 All classes, including communicator, all modes

Similar adjustments would be done at 80, 15, and 10 meters.
In other words, what we will have done is to ï¿½slideï¿½ the phone bands down the equivalent amount of the former novice segment, and allowed the new communicators access to the top 50 KHz of the voice band.
Traditionally, higher-class licensees have been given access to the lower frequency segments within a band, and this would remain true. No one loses anything! Generals and Extras get some new phone bands, even former Novices, (now upgraded to Communicator) get more room in the CW >>segment, and access to a portion of the phone band.

And put all the rank beginners right down against the bottom 25 where they'll feel right at home! Sure, why not? Nothing like trashing up the entire band (save a paltry 25khz) with the greenest of the green. After

all, this is ONLY a hobby, nobody takes any of it seriously anyway. GAG! And don't DARE call me anti-beginner----nothing could be farther from the truth. Obviously you have no concept of what it takes to get new hams indoctrinated and assimilated into the hobby or you would never put forth such a concept. Of course there should be overlap, no one wants the old days of the Novice Reservation, but even that was useful in its day. But to dump rank beginners all the way down to the lower 25 is --- I'll go ahead and say it - it's dumb, and does neither them nor anyone else good service. You carry inclusiveness way too far. Allow them a good overlap--keep the old Novice segments for them to use-DIGITALLY with experienced hams to talk with, plus another 25kc below into General territory where they can mix it up with experienced hams on their own turf, digital and CW - oops, they'd have to learn the code for that. Sorry. Give them some phone privileges in each band, yes. But there is *no* justification for handing them near-carte blanche.

>>>As we all know, several petitions requesting that the FCC remove Morse code testing have been filed. Depending on how soon a NPRM is issued, assuming it is at all, then we have to wait while they slog their way through the rule making process. One of the things that will happen is that comments, both pro and con, will begin to accumulate. After a several weeks or at most a few months, and assuming the majority of comments are in favor of eliminating the code as a licensing requirement, then we plan to file for a waiver asking for an immediate end to code testing. Obviously, this can only be done if there are enough favorable comments on file for the FCC to justify granting such a waiver. The actual change in the FCC rules will still be in progress, but if we can show that there is enough interest, and that such a waiver will be beneficial >>to Amateur Radio as a whole, then there is a good chance it would be granted.

Let's not count our NPRMs before they're hatched. FCC has said, correctly, they're in no hurry to close out the book on code testing - if it does it at all. There is *NO* valid reason to dump all code testing, although most everyone seems to be ready for reasonable HF access for those with no code test. I agree with John Johnston, at least partly, in that it is a true fact that no Extra class could ever be considered an expert amateur without proven ability to use radiotelegraphy, radio's most basic mode. I hope you do know that it remains as the second-most-used mode in ham radio. Strangely that seems to make no difference to you and Fred and your Agenda. Yes, you have an Agenda. You're doing a marvelous job of describing it here.

>>CW is a great mode. Itï¿½s fun. I enjoy it. And, itï¿½s time to move on.

Well, move on at your pleasure. But don't think you can move the rest of ham radio so easily. Reminder: Radiotelegraphy **IS TODAY** the second most used mode in ham radio. To blithely attempt to dump it just because you're interested in other pursuits, like making yourself famous by asserting your own version of restructuring ham radio just

won't work. There's too many guys like me still around.

>>Are we ï¿½dumbing downï¿½ amateur radio? Are you kidding? Have you looked at the new Extra class tests? Could you honestly say you could pass one, picked at random, ï¿½coldï¿½? I couldnï¿½t, at least not without some serious study of the books.

What,you no longer have a useful memory? For that's what the question pools require- a good working memory, not for learning the material but for basically learning which answer goes with what question. Yes, still. You "learn the test", how to pass it and get the license, not to learn a lot of radio. Trying to actually learn what all that stuff means actually gets in the way of the goal of getting the license for those unschooled in radio. To assert otherwise is nonsense. Remember, I too have given *lots* of VE tests. Fortunately many new hams are actually interested enough to go ahead and learn some radio after licensing, but that is by no means a general trait. If you don't believe it you haven't been paying attention.

>> I've been licensed since the late 50's. Extra since the 70ï¿½s. Even had a ï¿½First Classï¿½ commercial radiotelephone, with both the radar and aircraft endorsements - passed all the elements in one sitting, missed at most 3 or 4 questions on any given section - a couple were perfect. And, except for the Novice, did this while sitting in front of the FCC themselves, no less. Never flunked a FCC code or theory exam. Never. So what? That and a dollar will get me a cup of coffee.

So welcome to the club. I took the Novice exam in late December 1956,and received the license the first of March, 57. By late May I was ready for the Conditional - I lived 260 miles from the FCC district office. I was contented to remain there indefinitely until Incentive Licensing took away some of my favorite spectrum. So instead of carping forever I studied up and sat in on many a session of W1AW code practice and soon took my Conditional ticket to the FCC at Kansas City and brought home the Extra. That required that I go through the 13 wpm code test, General and Advanced writtens, plus the 20wpm code test and Extra written, all in one session. But I made it. Oh, I too had a First Phone with endorsements. I was a graduate of Fort Monmouth and the Signal School. I agree, it means little now. But to blithely dismiss all that in favor of near-instant licensing of anyone with the mildest of interest in ham radio is not the answer to securing the future of the hobby/service. To say that the past has no value in considering the future is to dismiss all that has gone before. I think we know better than that. "The past is prologue".
It's difficult to see how you "change it all" types can't understand that the future builds on the past.

It's getting late, so... To wrap this up , I agree with part of your proposal. We do need a valid equivalent of the old Novice back again, updated to meet the times, of course. But let's not leap too far for our footing, lest we wind up swimming in a swamp of inexperience. Give the beginners plenty modes to learn and plenty of room in which to learn

and use them. But let's retain some semblence of normalcy. And yes--experience, tenure, knowledge and skill, *including Morse code skill* *DOES* still count for something.

To dump all code testing for the Extra class license will be the beginning of the deterioration of ham radio such that I really don't want to contemplate where it would end. The experience of the past 30 years is a good but cautionary indicator of where it leads. Yes, I'm talking to some degree of what happened to CB, and to ham radio as a part of that CB degeneration, for a great many hams have come from CB. Many of them have become good hams. But far too many have brought the worst attributes of CB with them. To ignore the certainty of adding to this baggage by making full HF access much too easy is unconscionable and potentially destructive to an extent that is most unpleasant to contemplate.

>Is there a real reason?

12 to 13 wpm is generally agreed to be above the speed where things such as
"counting dits" work for most people. It's the beginning of the skills which
take one to higher speeds

20 wpm derives from the old 1923-24 "Amateur Extra First Class" which chose 20
as double the old 10 wpm standard. It was reintroduced in 1951 when the current
Amateur Extra class was created.

Both speeds are far below those required of experienced professional Morse
operators.

I agree 100%.

Now, what level of written testing is required to meet that purpose?

And how do we justify any testing or test questions that exceed that purpose?

I invite you to read KL7CC's paper on the AL7FS website and see what NCVEC
thinks about the future - besides code testing.

Take a spin over to AH0A's website and see how the number of new Techs has
dropped since the new Q&A pool was put in place July 15.

Please tell us how we can defend the Extra written test when Generals have the
same bands, modes and power levels.

Agreed - and we have detailed ways that could be done within the present system.

>I don't mean to come across as condescending, but your attempts
>to equate Morse testing's irrelevance to the written tests in an effort
>to support continued Morse testing is something I'm getting tired of.

You've got it backwards.

>And I'm not going to play that game.

My point is simply this: When someone or some group challenges the *written* tests - particularly the parts beyond the regulations and safety - how are we going to defend them from a regulatory point of view? Particularly if they use the exact same arguments as used against the Morse test?

You and I and many others will say "Those writen tests are relevant and reasonable". But how can we *prove* it?

Before restructuring, it took 5 written tests totalling 190 questions to get full privileges. Now it takes 3 writtens totalling 120 questions. Did we lose anything by that change?

Have you read KL7CC's paper on NCVEC's vision of the future of amateur radio? I invite you and everyone else to take a look, with particular attention to the parts other than code testing.

It ain't a pretty vision.

So, how short IS the list now...

I've heard at least 2 of them on national TV in 'family hours'.

"Piss" has been heard a few times, but the only one I can think of I'm
not sure of. War Games? Anyone know of other places?

And "teats" all over the place. Just recently in a broadcast of 'Witness'
with Harrison Ford in the barn with the Amish farmer...

of
> all areas and I'm asking a sincere question)?

The fact of the matter is that the ONLY serious technical studies
presented to the FCC in their Notice of Inquiry on BPL came from
the good work of Ed Hare, W1RFI, and his colleagues at ARRL.

The "access BPL" industry has done essentially nothing but "hand-
waving" and ignoring/denying that the problem exists. They want
to make $$$ ... and they don't appear to give a damn about the
impact on the other users of HF.

That they claim that "power wires don't radiate" (when NEC models,
as well as plain old common sense, indicate that they do) and that
"BPL is a 'point source' radiator" (how one can make that argument
when what they are building is essentially a large, distributed antenna
system) clearly indicate their deep state of "don't confuse the issue
with the facts" denial.

> The "promise" of BPL is to serve areas that are not served well
> by cable or DSL.

While DSL is not available in all areas due to the distance from the
central office factor and the phone companies' slow rollout in areas
of lower population density, acccording to the latest statistics I've
seen, cable "passes" 97%+ of US households. There are also
internet via satellite services available, using dishes like (sometimes
the same dish as) satellite TV services. There are also "WISPs"
who provide services using more appropriate spectrum in the low
microwave bands.

The business model for BPL is WAY less than compelling and its
technical suitability is poor as well, not only because of interference
TO the wide variety of licensed HF users, but also because of the
potential for interference to the BPL system FROM those licensed
users ... and BPL will have NO claim of protection from such interference.
My belief is that consumers deserve a more robust and reliable means
of receiving broadband internet services - one that doesn't present the

(bi-directional) interference issues of BPL - and that there are a number
of such alternatives available already.

> Did they test a
> fairly substantial area in the country where they could demonstrate

> police, emergency, etc. are very likely not on low band VHF)?

Ed has a better overall view of the current deployments of BPL, but I know
they are few and limited in scope at the moment.

> Also, FM
> broadcasting is usually located near large population areas (since signals

signals
> on their FM receivers.

S9+10 on a VERY short whip (an "Outbacker Joey") is a pretty huge
signal to me ... with BPL proposing to go up to 80 MHz, I would
think that the FM broadcast band is at relatively low risk, though FM
receivers could experience some degree of "desense" if the BPL
signal at the front end was strong enough due to proximity.

> I note the "neon sign" comment in the thread. Neon
> signs are usually found in cities.

The "neon sign" assertion by the representative of PPL (the Emmaus
BPL system operator) is *pure* BS ... the signature was SS, NOT
a neon sign ...

> Those test sites are likely located
> either in a city or in an area where the money interests already checked
the

I think you're giving them FAR too much credit for caring about anything
but deploying BPL ...

Paul Keinanen wrote:

> With a less pompous start, you might have gotten some more favourable
> comments :-).

I certainly don't mean to be pompous, at least on this matter.
I've tried to make clear in the body of the post that
I'm not the brightest candle on the cake, that I
want to get the idea out so people with more talent
than me can work with it.
As for the unkind comments of a few:
Hecklers, cynics and naysayers greet anyone who proposes something new.
It comes with the territory.

> For a few years there have been remotely connected receivers connected
> to the internet which can be remotely tuned to any desired frequency..

Yes, Yes... Am I just not being clear, or are people not
closely reading that to which they reply? Probably a little of both.

We don't WANT to talk over an Internet telephone line
to some remote base station.

That's not the point.
Please read it again:
That's NOT the point. < (repeat as necessary)

We want to *use our own equipment, right here.*
Noise, antenna bans and LEGAL restrictions
have kept us from the work we want to do.
This system gets around the obstacles by creating
a second "ether" (ionosphere, etc.; pick the term you like)
which you control and *you* regulate.
The two main points are:

1. To make possible radio operations of any kind that
were once impossible, for any number of reasons.

2. To "harvest" clean spectrum in a quiet location and
bring it to your receiver, so you can continue
your radio hobby regardless of what BPL or any
other interferance source does to your local radio environment.

The system is intentionally simple and limited,
so lots of people can tinker with it in short order.

I have faith that those many people
who are sharper than me will expand the concept.

I've had a heck of a lot of fun working on this.
Especially enjoy the ability to record radio spectrum.
I have one hour-long segment on CD centered on 3932 KC.
It contains seven separate, distinct and interesting SSB QSOs
that I can listen to at my leisure, plus many other stations.
And a lot of us military radio people think having a
nation-wide net of WWII BC-611 handie-talkies,
all able to talk to each other in real time,
would be an absolute gas.

Here's something cool: I've long been involved in longwave
work on the 1750 meter band (160-190 KC). This winter,
I plan to take a laptop and a V.S. remote front-end
to several locations and record an hour or so of the band
from 170 to 190 KC. I can then take them home, run
the recordings through a V.S. transverter, and hunt for
all those weak LOWFER signals in the comfort of my own home.
It's still just as challenging to find them, but I get some
major advantages. First, I'm not off on frequency "A" and
missing an opening to station "B;" I can "rewind" and go
look for him, too. Second, I'm not sitting in the dark,
freezing and trying to tune my audio filters with numb hands.

Anyway- it's a tool people can use if they want.

Simple ... the FCC has determined that the ARS is "primarily a technical service." Additionally, the ITU Radio Regs require administrations to determine the technical qualifications of applicants for amateur licenses and there is an ITU-R Recommendation (M.1544) that outlines the theoretical knowledge that amateurs should have ... yes it is not strictly mandatory, but the US and most other administrations do generally follow the guidance given by ITU Recommendations, even ones that are not strictly mandatory.

> You and I and many others will say "Those writen tests are relevant and
> reasonable". But how can we *prove* it?

By citing the facts above ...

> Before restructuring, it took 5 written tests totalling 190 questions to
get
> full privileges. Now it takes 3 writtens totalling 120 questions. Did we
lose
> anything by that change?

There was some consolidation of testing as a result of the smaller number of classes. I don't see that as a big deal.

As Ed Hare said over dinner when he was down here last ... he remembers the 3 page study guide he had to work from when he first got on the air. Now "Now you're talking" is well over 200 pages of material for folks to study and absorb ... how this is "dumbing down" is beyond me.

Can we put this one to bed now?

> I'm not at all sure who uses what spectrum in the areas where they are
> testing BPL

Nobody knows how much interference the stuff could generate
eventually. The BPL proponents are advertising their intent to run
from 2 thru 80 Mhz inclusive. At considerably higher power levels than
they're using in the current test areas. There's a major threat in
itself and it's not being tested.

> but I'd bet coffee for a week that those folks studied the
> situation carefully before proceeding.

Would not surprise me one bit. But then along came hams with HF mobile
rigs like Carl wk3c, Ed Hare w1rfi and Bob Davidson w3hj and myself
who took ham radio into BPL test areas and are blowing the whistle.
Loudly.

> Where did they test (I don't know of
> all areas and I'm asking a sincere question)?

Go to the ARRL site for the complete list of known test areas. All of
those I know about so far are in the NE corridor in densly-populated
upscale +/- residential neigborhoods. Because that's where the money
is. Which also happen to be the same sorts of neighborhoods in which a
lot of hams live too.

> The "promise" of BPL is to
> serve areas that are not served well by cable or DSL

Total BS. BPL is quite expensive to deploy. A fiber optic feed line or
cable TV line has to run parallel to the power lines. These feed lines
inject the BPL signals into the low voltage power lines via taps
roughly at every street intersection or the neighborhood has no BPL.
If there isn't any cable or DSL service in your locale because there
isn't any ROI in it for those service providers there most likely
won't be any BPL either. They're all chasing the same dollars.

> Did they test a
> fairly substantial area in the country where they could demonstrate
> far-flung connections to the BPL,

Absolutely not. There are no "far-flung connections" to BPL per above.
In the Emmaus PA test area which I've visited BPL is only distributed
along a few blocks of maybe 3-4 residential streets. Completely
inconclusive test program to the point of being a contrived scam.

> or did they test in densely populated
> areas that are already served by various broadband connection

Seems like.

> (where fire,
> police, emergency, etc. are very likely not on low band VHF)?

Dunno. There are at least three test sites concentrated in the Lehigh
Valley region in PA and there are very few if any emergency services
still using lo-band VHF in PA. I have not seen any references to BPL
being tested in places like California and Dick's Missouri where
lo-band is still in use. What a big surprise eh?

> Also, FM
> broadcasting is usually located near large population areas (since signals

BPL as presently conceived is not supposed to run in either the AM or
FM broadcast bands. Plus there are guard bands between BPL and both
broadcast bands. 'Nother big surprise.

> I note the "neon sign" comment in the thread. Neon

One more thing Jim. 20 wpm is above another 'threshold', which is at about
18wpm for most folks. So you gotta know it to do it.

Mike,

Thank you for expressing my concerns much better than I could.

Have you read the NCVEC position paper by KL7CC? It's not just about
code testing. It already proposes a drastically easier entry level
license.

Of course *most* hams will not support reductions in written testing. But will we have a choice if somebody makes a case in, as you say, *regulatory* terms?

Here's a scenario for ya. Suppose:

At some point in the near future, FCC just dumps Element 1.

There's a surge in upgrades and new hams. Maybe we reach 700,000 - and maybe we don't.

Then the growth and upgrade numbers drop back to about what they were before. Maybe they're a little better, but not a lot.

Some folks say it's all due to that $%#^& code test and those %$&*! old timers, but after a few years the code test is but a memory and the old timers are fewer every day.

Then some folks - maybe NCVEC - makes noises about the failure rates of the *writtens*, the burden of taking and administering the tests, etc. They point out how few hams use homebrew, how few technical (as opposed to operating) violations occur in the ARS, and question the "regulatory purpose" of all those writtens.

And the one 'killer' argument they bring to the table is that Techs have had full power and mode privs above 30 MHz for years and years with very few technical problems - so what is the regulatory purpose of much more written testing for full privs below 30 MHz? Sure, some regs, some propagation - but why all the rest of the stuff?

How will we counter that argument?

Nobody has yet come up with an answer. And as you point out, there *are* folks who want more - or less.

Not at all. The fact that at least some test areas are using only up
to 22mHz means that they will cause NO interference to low band Public
Safety comms simply because they're NOT generating that interference, as
they will certainly be doing when BPL is rolled out in its full capability.
But for the purposes of convincing regulators, they can truthfully
say "We received no complaints from them" while carefully ignoring
the truth as noted above.
Do you really think decision makers in the FCC would
be aware of what actually happened? I sure don't. Even if they
hae a factual technical report from their own technical staff
on their desks. It's EASY to ignore paperwork when it fits the
purpose. Just don't read that part.

I've passed all this along to friends in that venue with a notation
on the fact that it is known that some test sites are NOT presently
active above 22 mHz so they will be aware that Low VHF noise may be
missing, and to not construe this as assuming that BPL will not cause
interference with lowband HF systems.

Why should 'B' class license holders take a Morse Test, at any speed, to become a dinosaur like most, not all, 'A' License holders?

We were good enough to pass the RAE Exam!

Those who wish to use Morse can. I have on CAT but, just for the experience you understand.

Use it by all means but, do not keep those off the air who enjoy Telephony.

The airwaves are for the use of all those qualified.

What would you rather, the frequency used, or lost, because of an outdated and backward looking 'elite'

> That's an adverb, not an adjective.

Um, no; it is modifying "brilliant", which is a noun. Thus it is an adjective.

Bill, while you like to bring out this argument when discussing
Elimination of Morse code, I'd like to suggest you imagine some
situation where something you like about the ARS is going away.

Now assume that someone brings up the same point, that is:

I also believe that when it is obvious to the FCC thata rule change is appropriate...even if a majority of hams oppose
that change...the FCC will do what it believes is right and in the public interest.

I'll bet you would interpret that a invitation by the poster for you to go away and kee quiet!

Perhaps we should use those words for say... BPL? Ad a few words to the beginning, and:

<<<NO QUOTE of yours, just an example here>>>

As regards to the FCC approving the nationwide deployment of BPL, I also believe that when it is obvious to the FCC that a rule change is appropriate...even if a majority of hams oppose that change...the FCC will do what it believes is right and in the public interest.

I'm trying to say that while a truism, it isn't necessarily a good argument. See what I mean?

The ARRL site, <http://www.arrl.org/tis/info/HTML/plc/#Field> , provides links to the following information:

"PLC is a "carrier-current" system, designed to intentionally conduct signals using electrical wiring. Although a carrier-current device is an unintentional emitter, because the power lines have such a significant potential to radiate and because a practical carrier-current device generally needs more signal than the permitted conducted emissions levels for unintentional emitters, carrier-current devices are not required to meet those conducted-emissions limits, but are required to meet the general radiated emissions limits in Sec. 15.209.

ï¿½ 15.209 states that the radiated emission limits of intentional radiators generally can't exceed the field strength levels specified in the following table:

Frequency (MHz) Field Strength (microvolts/meter @meters)

0.009-0.490 2400/F(kHz) 300

0.490-1.705 24000/F(kHz) 30

1.705-30.0 30 30

30-88 100 3

88-216 150 3

216-960 200 3

Above 960 500 3

Carrier-current devices are "Verified" as described in the Part-15 rules. This means that the manufacturer is required to test them to ensure that they comply with the FCC regulations. Under the present rules, they must be tested at 3 typical locations. "

Note that the HF Spectrum allows a S8 to S9 signal level, 30 uV/m at 30 meters distance.

Wouldn't it be more simple just to hook up all of your ham gear to a telephone line, and pretend that you are hamming via the telephone ?

Seems a much more simple approach to me, and the same outcome-- you would be **using** (hee hee hee) ham equipment, while talking on the phone !!!

Jim,

I had a 2nd class radiotelegraph license back in 1967. One needed to be 21 (I was still a teenager) plus have sufficient service time to qualify for the 1st (I forget, but it seems it was one year at sea running communications under the supervision of a 1st telegraph). The second was 20 words per minute and the 1st was 25 words per minute. From what I have heard, the 25 was sufficient to get you a not too good paying job on the slow side circuits whilst you had to be 100% copy and reliable at 30 to get the good jobs on the main circuits. Of course, this would pre-date 1967 by quite a few years :)

From what I recall, back in the 60s you tended to hear the newcomers at 5 to 10 words per minute, a minor number in the 13 to 20 range, a number in the 30 word per minute range, and a surprising number in the 40 plus word per minute range. I did run into one guy that I had a problem with until he realized I wasn't the guy he was used to hearing at KG6NAC and finally slowed down to about 50 (which was really pushing limits for me at that time). I originally called cq at about 40 to 45 and he responded at around 60. Fortunately, I got most of his call but that was a bit much.

>> the exact same arguments as used against the Morse test?
>
>Simple ... the FCC has determined that the ARS is "primarily a technical
>service."

OK, fine!

Now what, exactly, does "primarily a technical service" mean wrt testing? You
and I agree that it means hams should know more than "turn the left knob to 6".
But to someone else it could mean that the tests should only be about the most
basic concepts, and that hams should be free to learn as the need arises.

And remember that what seems basic and simple to engineering types like us can
be advanced and complex to other folks.

>Additionally, the ITU Radio Regs require administrations to
>determine the technical qualifications of applicants for amateur licenses
>and there is an ITU-R Recommendation (M.1544) that outlines the
>theoretical knowledge that amateurs should have ... yes it is not strictly
>mandatory, but the US and most other administrations do generally
>follow the guidance given by ITU Recommendations, even ones that
>are not strictly mandatory.
>
That language leaves M-1544 wide open to an enormous variety of
interpretations. And there's a world of difference between "theoretical
knowledge that amateurs should know" and "subjects that must be tested".

>> You and I and many others will say "Those written tests are relevant and
>> reasonable". But how can we *prove* it?
>
>By citing the facts above ...

I hope you are right about that. But any lawyer will tell you that it's all
about interpretations. Like that phrase "pool of trained operators".

>
>> Before restructuring, it took 5 written tests totalling 190 questions to

>> lose
>> anything by that change?
>
>There was some consolidation of testing as a result of the smaller number
>of classes. I don't see that as a big deal.

OK, fine. Now suppose somebody pushes 2 classes and a total of 60 questions. Or free upgrades for already licensed hams.
>
>As Ed Hare said over dinner when he was down here last ... he remembers
>the 3 page study guide he had to work from when he first got on the air.

That study guide shrinks every time Ed tells that story.

What he doesn't tell you is:

- The study guide was for the old Novice, with its extreme restrictions

- He did not count the pages of regulations in the back of the book that were also required.

- The study guide was simply a guide to what you should expect to be on the test, not a complete training manual, nor a complete copy of every possible test question and answer

- That it's not the size of the book but the level of information in it.

- That Ed had quite a bit of radio background before he ever picked up the guide.

>Now "Now you're talking" is well over 200 pages of material for folks to
>study and absorb ... how this is "dumbing down" is beyond me.

Simple - the 200 page book is a complete step-by-step guide to all aspects of ham radio for the newbie, and includes detailed explanations of every single question in the pool. The study guide was simply an indicator of what would be on the test.

A more accurate comparison would be to compare "Now You're Talking" with "How to Become a Radio Amateur" or "Understanding Amateur Radio".
>
>Can we put this one to bed now?
>
Let's talk actual examples.

How about this idea, if/when code testing is dropped:

1) Tech is replaced by a new entry level license that (call it "Communicator")

2) Communicator allows most of General CW/data and about half of General voice bands on HF, plus lots of VHF/UHF

3) Communicator power level is below RF exposure limit (100W below 24 MHz, 50 W above) and there are no RF exposure or safety questions on the test.

4) No regulations questions on the Communicator test - instead, new Communicators have to sign a statement that they have provided themselves with a copy of Part 97 and have read and understood the applicable regs for their license.

5) All existing Novices are reclassed as Communicators, all existing Techs, regardless of vintage, get free upgrade to General, all existing Advanceds get free upgrade to Extra.

6) Present Novice subbands - all of them - become more voice/image space.

I'm not the one proposing this.

Something about a broken clock being correct twice a
day.....

I lost interest because of all the old farts who couldn't talk about
anything except the good old days.....Took me 25 years to get
to that point, but it did happen.

Take yer homebrew 6L6 transmitter and show it to Hiram Percy Maxim so he can
see how LITTLE progress you have made in the last 65 years.

THAT is what will make him turn over in his grave.....

>
Besides ignoring the technical weaksnesses of BPL, they're also ignoring the
really poor business model that drives it.

>That they claim that "power wires don't radiate" (when NEC models,
>as well as plain old common sense, indicate that they do) and that
>"BPL is a 'point source' radiator" (how one can make that argument
>when what they are building is essentially a large, distributed antenna
>system) clearly indicate their deep state of "don't confuse the issue
>with the facts" denial.

It should also be mentioned that the location and existence of test sites was
kept very quiet until ARRL/W1RFI blew the whistle. Representatives of radio
services were neither invited nor even informed of BPL tests.

One of the simplest and most positive tests is to turn the BPL service on and
off and observe changes in interference, thus identifying if BPL is the source.
But to my knowledge no BPL test site has done such tests.
>
>> The "promise" of BPL is to serve areas that are not served well

>internet via satellite services available, using dishes like (sometimes
>the same dish as) satellite TV services. There are also "WISPs"
>who provide services using more appropriate spectrum in the low
>microwave bands.

Agreed. But there's more:

Access-BPL is really meant as a "last mile" system, to avoid the need to wire houses for cable or install special filters and modems. So the fiber still needs to get within a certain distance of your house, same as with DSL.

The main selling point for Access-BPL is that you can just plug a BPL modem line into any wall outlet, and you're connected. Your entire house wiring becomes an internet connection - and also an antenna to radiate BPL noise. So even if all services are buried, you'll still have noise from the house wiring radiating.

The BPL signal travels on the medium voltage (4-13 kV) distribution wire(s) and is then coupled around the pole pig transformers with special couplers. In most neighborhoods other than those of very low density, a transformer feeds a few homes, so everyone's wiring gets the BPL signal even if only one customer is signed up. Indeed, if a coupler is left in place, everyone's house wiring gets the signal even if no one is signed up.

The couplers and fiber/MV converters mean that BPL has significant installation costs even if they don't have to do any installation in customer's houses.

>The business model for BPL is WAY less than compelling and its
>technical suitability is poor as well, not only because of interference
>TO the wide variety of licensed HF users, but also because of the
>potential for interference to the BPL system FROM those licensed
>users ... and BPL will have NO claim of protection from such interference.

What about harmonics? The BPL signals on the video sounded like they had pretty fast risetimes.
>
>> I note the "neon sign" comment in the thread. Neon
>> signs are usually found in cities.
>
>The "neon sign" assertion by the representative of PPL (the Emmaus
>BPL system operator) is *pure* BS ... the signature was SS, NOT
>a neon sign ...

And did they turn off the BPL for a few moments to demonstrate that it was a neon sign and not the BPL? One guess.....
>
>> Those test sites are likely located
>> either in a city or in an area where the money interests already checked
>> the
>> FCC site to ensure no low band VHF use by police, fire, ambulance, etc.
>
>I think you're giving them FAR too much credit for caring about anything
>but deploying BPL ...
>
Exactly!

Something else to watch out for.....

Because different systems are being tried in different locations, proponents of each system will probably proclaim the *their* system doesn't have that problem - what you heard at the Podunk site is Brand X BPL.

73 es tnx Carl de Jim, N2EY

We now have "Ham Radio" magazine, and "73 Magazine" both now defunct.

Would you like the adjective "defunct" in front of ARS???

Two levels.

A beginers level similar to our current Technician examination, with a
modest limit on power, and a non-renewable 10-year term.

A regular level similar to our current Extra examination, with power
levels of 1.5KW as now.

> > > group that monitors programs for adult content.
> >
> > That's an adverb, not an adjective.
>
> Um, no; it is modifying "brilliant", which is a noun. Thus it is an
adjective.

Brilliant is an adjective in the above sentence as he was not referring to a
precious gem.

brili¿½liant
adj.
Full of light; shining. See Synonyms at bright.
Relating to or being a hue that has a combination of high lightness and
strong saturation.
Sharp and clear in tone.
Glorious; magnificent: the brilliant court life at Versailles.
Superb; wonderful: The soloist gave a brilliant performance.
Marked by unusual and impressive intellectual acuteness: a brilliant mind; a
brilliant solution to the problem. See Synonyms at intelligent.
n.
A precious gem, especially a diamond, finely cut in

So the sentence in question has the following structure.
This - pronoun, subject of sentence
is - verb, state of being
really, really [expletive] - string of adverbs modifying the adjective
that follows.
[expletive] referred to is a special case where the adverb has
been formed from a verb.
brilliant - a characteristic and thus an adjective not a noun.

It has the same nature as the sentence "John is tired" which uses an
adjective to describe John. It is not the nature as the sentence "John is a

boy". The first sentence is noun-verb-adjective where the latter is noun-verb-noun.

It's his point that is being debated, not whether Morse code is going away or testing is going away.

If Bill wants to use the argument that:

> Not at all, but I also believe that when it is obvious to the FCC that
> a rule change is appropriate...even if a majority of hams oppose
> that change...the FCC will do what it believes is right and in the
> public interest. 98-143 serves as a bellweather to that since, if
> most hams favored 5wpm General and 12 wpm Extra, the FCC
> didn't buy it.

he really isn't using all that good of an argument. These are the same people that think BPL might just be the biggest thing since sliced bread.

They could of course just decide that no ARS is in the public interest. And I suspect even you might not care for that all that much.

Use the arguments of outmoded, hazing, specific mode testing and others if you like.

But using what the FCC decides as justification probably isn't a good argument.

We have seen that many times. Clearly the overwhelming
majority of comments filed by hams against the loss of
220 bandwidth was just such a situation. The same may end
up being the case with BPL.

> Now assume that someone brings up the same point, that is:
>
> I also believe that when it is obvious to the FCC thata rule change is

>
> I'll bet you would interpret that a invitation by the poster for you to
> go away and kee quiet!

People can invite me to do anything. If someone is so shallow
that they think my comment above is an indirect way of telling
them to keep quiet, then they must be pretty weak minded...IMHO.

> Perhaps we should use those words for say... BPL? Ad a few words to the
> beginning, and:

I already brought up BPL above.

> argument. See what I mean?

It's not an argument, it is a fact...reality. We deal with it in the
past and will do so in the future. The point is that the FCC doesn't
look to the comments as a democratic voting process.

Cheers,

Making the second level license examination equivalent to the current Extra examination sounds like it would drive people out of ham radio. That's simply too big a jump to expect people to take in one swallow so to speak especially since this would affect current Technicians who entered the licensing program under a system with 3 tiers (or more for those who entered several years ago). It would also take away privileges from existing Techs in that they are now receive renewable licenses but would not under that proposal.

That is your opinion...I think otherwise. You and I can join forces to
defend writtens...if and when someone does try to end
writtens. Frankly, I don't think it'll happen on my watch.

Get this- doubtless aware that Missouri's Highway Patrol operates on
low VHF, they located the test site at the town of Cape Gireadeau-near
the Southeast corner of the state on the border (Mississippi River),
well away from the mainstream.
And- I was most interested in the fact that the Emmaus test site used
only frequency up to around 22 mHz. That means if they do likewise in
the Missouri test site area they will be able to truthfully say "We
received no interference complaints from MHP users".
Of course if they don't *generate* any RFI on MHP frequencies they won't
likely get any comnpalints! What would you bet they fail to mention that
fact in their glowing report to the FCC?

This is in essence what NSA does with as much of the RF spectrum
as they can, all over the globe. They have no idea what they have,
but if you can tell them the time, the general location, and the
frequency, they will hook up a receiver onto their data log, and
look around for the signal. This is just what they did when that
KAL plane was shot down, and NSA came up with the com signals of
the fighters that did the deed.

TV channels 2, 3, 4, and 5 will get clobbered by the junk going up to 80MHz.
The video signal is AM modulated onto the channel carrier (with a
portion of the
lower sideband suppressed) and will have no ability to reject the BPL
noise.
The effect would be somewhat similar to a sparky vacuum cleaner motor
throwing
white and black spots throuout the picture. The sound, being FM, will fare
better. Well, there's digital HDTV, but most everyone still uses analog TV.
And I don't get cable or satellite.

Gee whiz, not all that long ago I used ARRL (ARRL ARRL ARRL ARRL ARRL)
study material that was comprised of REAL Morse Code (not Farnsworth)
and it couldn't get anyone above 10wpm if their lives depended upon
it.

Yet we have some hick from Missery saying that you just
gotta-wanha-doit...

Whatta (fuchin) concept!!!

Why did I spend months at it if I didnah wannah doit?

> >> Lazy, you say? Anyone can make it to 5 WPM, you say? They just

>
> **THAT** is truly laughable,

Except in real life situations.

For example, all WWII POW's that used Morse Code were dity-bopping
trained radio operaqtors.

Hi hi hi!!!

They learned what they needed - as they needed it.

particularly so coming from a fellow who
> claims to be a code user himelf. Any code user who actually
> does use it knows much better than that. You DON'T and CAN'T learn the
> code on the spur of the moment, just "when you need it".
> What total nonsense!

Yes, what total nonsense those WWII POW's were.

You probably fly their black POW flags upside down.

Rally round McCain.

> >>>Will ham radio turn into CB? No, it woni¿½t. In the first place, CB

> say that all those HF troublemakers are all code tested hams is simply
> assuming an invalid conclusion.

True. Some legitimately passed the 20WPM Morse Code exams, and could
Easily pass a 40WPM exam if it existed. Some people are just jerks,
and Morse Code doesn't make it otherwise, not matter what Parson Jim
or WzeroEX want to beleive.

> >>Listen to 75 meters on any given evening, or 20 meters above 14300

DICK, I might refer you to my comments re the NPRM98:

"What I fear most about the restructuring is the lack of enformcement

and what I fear most about maintaining the status quo is the lack of
enforcement."

i.e., it HAS NOTHING TO DO WHATSOVER WITH THE MORRIS CODE.

> >> Suppose, just for a moment, that a petition got filed requesting

> entire band (save a paltry 25khz) with the greenest of the green.

Get to work DICKless. Edjucate the masses. Trashing need not occur.

After
> all, this is ONLY a hobby, nobody takes any of it seriously anyway. GAG!

GAG? We've been gagging on your bile for years. Time for you to put
up or shut up.

> And don't DARE call me anti-beginner----nothing could be farther from
> the truth.

So why did you quit you VE Team again?

Obviously you have no concept of what it takes to get new
> hams indoctrinated and assimilated into the hobby or you would never put
> forth such a concept.

Welcome to the world of recruiting. Imagine yourself an Army
recruiter and being told to assimilate "an army of uno."

Now don't smear your tears on your sleeve and grab your ball(s) and go
home.

Be a team player or go to Leavenworth.

Of course there should be overlap,
> no one wants the old days of the Novice Reservation,

The ACLU might have sumptin to say about that. Beware Billy Jack.

but even that was
> useful in its day. But to dump rank beginners all the way down to the
> lower 25 is --- I'll go ahead and say it - it's dumb, and does neither
> them nor anyone else good service. You carry inclusiveness way too far.

So you want them to shack up at your place till they gradjiate?

Gradjiate from what?

> Allow them a good overlap--keep the old Novice segments for them to use-
> DIGITALLY with experienced hams to talk with,

Fuch that. You MAKE experienced hams populate that arena and I'll buy
into it.

From here on, all General, Advanced, and Extra licensees must spend
the first TWO hours of EVERY operating period in the Novice ghettos
handing out benevolent CW qso's.

Hi hi hi hi hi!

Never happened in the good ole days, won't happen it he good ole now.

Now what?

plus another 25kc below
> into General territory where they can mix it up with experienced hams on
> their own turf, digital and CW - oops, they'd have to learn the code for
> that. Sorry.

Sorry 'bout what? They gotta spend the first two hours there whether
they have a QSO or not. Sorry, but thats just the way it is. Ham
radio wasn't meant for everybody.

Hi hi hi hi hi.

Give them some phone privileges in each band, yes. But
> there is *no* justification for handing them near-carte blanche.

Especially Carte Blanch for the likes of you.

> >>>As we all know, several petitions requesting that the FCC remove
> Morse code testing have been filed. Depending on how soon a NPRM is

They didn't say that.

There is *NO*
> valid reason to dump all code testing, although most everyone seems to
> be ready for reasonable HF access for those with no code test. I agree
> with John Johnston, at least partly, in that it is a true fact that no
> Extra class could ever be considered an expert amateur without proven
> ability to use radiotelegraphy, radio's most basic mode.

Jim says radiotelephone is the equivalent of radio's most basic mode.

Why do you disagree?

I hope you do
> know that it remains as the second-most-used mode in ham radio.

Next to phone, which Jim says is one of radios most basic and
elementary modes, re 1906.

> Strangely that seems to make no difference to you and Fred and your
> Agenda. Yes, you have an Agenda. You're doing a marvelous job of
> describing it here.

Jim says phone is the equivalent of CW in primacy and equivalency with
CW.

> >>CW is a great mode. Itï¿½s fun. I enjoy it. And, itï¿½s time to move on.
>
> Well, move on at your pleasure. But don't think you can move the rest
> of ham radio so easily. Reminder: Radiotelegraphy **IS TODAY**
> the second most used mode in ham radio.

Jim says that radiophone was essential as far back as 1906, years
befor the requirement of radiotelephony at 10 wpn was required.

Why don't DICK and Rev. Jim get together and work out the details of
the PHONE and CW debate and get back to use at their earliest
convenience.

To blithely attempt to dump it
> just because you're interested in other pursuits, like making yourself
> famous by asserting your own version of restructuring ham radio just
> won't work. There's too many guys like me still around.

So when did you dump FSTV?

> >>Are we ï¿½dumbing downï¿½ amateur radio? Are you kidding? Have you

> the FCC themselves, no less. Never flunked a FCC code or theory exam.
> Never. So what? That and a dollar will get me a cup of coffee.

So what's you're fuchin' problem with latter day saints?

> So welcome to the club.

Sechond du nuone.

I took the Novice exam in late December
> 1956,and received the license the first of March, 57.

Did you copy the Russkies satellite on 20M cw?

By late May I was
> ready for the Conditional - I lived 260 miles from the FCC district
> office.

Whaaaaah!

I was contented to remain there indefinitely until Incentive
> Licensing took away some of my favorite spectrum.

Whiiiiine!

So instead of carping
> forever I studied up and sat in on many a session of W1AW code practice
> and soon took my Conditional ticket to the FCC at Kansas City and
> brought home the Extra.

You dah Mahnnn!

That required that I go through the 13 wpm code
> test, General and Advanced writtens, plus the 20wpm code test and Extra
> written, all in one session. But I made it. Oh, I too had a First Phone
> with endorsements.

Phone? What da fuch a fone?

I was a graduate of Fort Monmouth and the Signal
> School.

You got paid to earn an amateur license?

So typical of the "I had to do it and you damed well have to do it
too" genre!

But unwilling to pay the next guy.

I agree, it means little now. But to blithely dismiss all that
> in favor of near-instant licensing of anyone with the mildest of
> interest in ham radio is not the answer to securing the future of the
> hobby/service.

As I said, you pay today's homeless three hots and a cot and they'll
be 20wpm Extras too, and you can discuss all day long (via CW) the
menu at the Salvation Army kitchen.

To say that the past has no value in considering the
> future is to dismiss all that has gone before.

DIS-missed!

I think we know better
> than that. "The past is prologue".
> It's difficult to see how you "change it all" types can't understand
> that the future builds on the past.

Yep, like sliding crappy code on a bug to thwart real digital copy.

Slime ball.

> It's getting late, so... To wrap this up , I agree with part of your

>
> 73, Dick W0EX

Extra DICK, you have brought some of the worst attributes of CB with
you. Why did you have to do that? Did you think we needed your
CB-like absolutism in the ARS?

Sayonara.

Brian

Perhaps Semper Fi Steve could shed some light on whether Dave's comments are original and worthy of publication in any periodical, whether QST, 73, or Ham Radio.

He is, after all, the "at large" editor of original material for amatuer publications.

Fortunately Charter around here is somewhat ameanable (sp.?) to repairing
their systems, but it is a challenge still. Consumers Energy around here is
next to impossible to deal with though. I am still a strong proponent to
buried power lines as opposed to powerlines on poles.

Not only that, they decrypted the secure voice! If you listen to the audio
you can tell it was originally narrow-band secure voice, which was common
in the Soviet Air Defense forces and interceptors.

And as I have been saying all along.... these are the ones that the
pro-coders need to cultivate and work with if there is actually any merit to
morse code. Refusal to do something like that demonstrates the lack of
merit of morse....

> >>Like anything else, when a person finds he or she has a need to use

> What total nonsense!

I believe he was referring to casual use, not necessarily in an emergency.
Albeit slow, a person could still send code via a chart/cheatsheet if in an
emergency. Granted, decoding it may be a challenge for the person, but a
person could still alert someone for help. (Not saying this is a viable
normal solution though.)

What's the FCC definition of "typical locations"??

> Note that the HF Spectrum allows a S8 to S9 signal level, 30 uV/m at 30
> meters distance.

15.209 is the problem, it's grossly outdated, did not foresee anything like BPL and the limits needs to be revised downward which is one piece of this brawl. Ref: Tailpipe emissions regs, same basic problem, different pollution media.

Another piece of it is that the BPL crowd wants permission to bust the already inadequate limits in 15.209. They're playing the regulatory loopholes game. The Japanese jumped past their regulatory Catch-22 techo-babble and abolished BPL period. We need to follow the Japanese lead and we're working on it.

The speed's only going to be as good as the slowest connection along the line. And I do admit that downloading a full copy of a magazine isn't going to be feasible for everyone, at least until broadband is widely available (via some other means than BPL!), but it's nice to have the option. Or perhaps it'll be possible to distribute magazines on CD-ROM?

Here's a business idea: set up an outfit as a clearing-house for radio-related magazines. Subscribe through the clearing-house and they burn a CD with all of the mags you get (CQ, PopComm, MT, whatever) each month and send it off to you. Just a thought....

Phil Kane has posted that there was a *shortage* of licensed
radiotelegraph ops for the maritime services during the Vietnam
conflict. Supplies going to VN went mostly by ship, all of which were
US flag vessels....

Any connection to incentive licensing is pure speculation.

It's still that way today. 'tother night I had a nice QRQ ragchew with
a French amateur on the low end of 80. Had the bug weight waay back!

I recall a post sometime back where a veteran described a code test
for US Navy "A" school, circa 1958. The test was to receive, on a
standard Navy mill, 5 letter groups at 24 wpm. For a solid hour.
Maximum of 3 errors in the entire hour.

An out-and-out removal of the written test would be opposed by almost everyone, so no one with any sense will suggest that. Not right away, anyhow.

What I'm talking about is efforts to gradually reduce the level of written testing. Take a few things out here and reduce the level of a few other things there, change the testing method a little someplace else, etc. Not just for entry-level but for all levels.

For example, what would you say to a proposal to remove the regulations questions from the entry-level exam? No questions on Part 97 - just require each new ham to certify that they have provided themselves with a copy, have read it, understand it, and will follow it. Good idea or bad idea?

> Frankly, I don't think it'll happen on my watch.

It's already started. See what the NC-VEC leadership has in mind for the future. The above is just one of their ideas. I think it's a very bad idea.

>Making the second level license examination equivalent to the current Extra
>examination sounds like it would drive people out of ham radio.

That depends on how it's done. If a person knows from the start that they have 10 years to get ready for the upgrade, they have a goal and can set a timeline to meet it.

There's also the possibility (I don't know if Hans' plan would allow this or not) to allow Beginners to simply take the Beginner test again if they're not ready to upgrade after 10 years.

>That's
>simply too big a jump to expect people to take in one swallow so to speak
>especially since this would affect current Technicians who entered the
>licensing program under a system with 3 tiers (or more for those who entered
>several years ago).

That all depends on how the transition is handled.

Perhaps all existing hams would simply get Regulars. Or maybe all existing hams except Novices.

Or perhaps existing hams would have their existing licenses and privileges extended/renewed until 10 years after the new system went into effect, putting everyone on the same timeline for upgrading.

>It would also take away privileges from existing Techs
>in that they are now receive renewable licenses but would not under that
>proposal.

See above - it all depends how the transition is handled.

Thanks for a clear and concise answer, Hans. I can see some merit in this idea, and some problems too. At first I saw only the problems, but after some consideration I see the merits too (simplicity, uniform access to bands for all hams, incentive to upgrade).

A few questions on this idea:

- What happens to existing hams' licenses? Does everybody get a Beginner, or a Regular, or do some get Beginner and some get Regular?

- If a Beginner isn't ready to pass the Regular exam after 10 years, can he/she retake the Beginner exam and get a new license? Or do they have to leave ham radio until they can pass the Regular?

- Can the Regular license test be taken straightaway or is there an experience requirement of having a Beginner license for a period of time?

Your answers are eagerly anticipated.

Me neither, but whatever they propose will be given serious consideration by FCC. That's why I think it needs to be discussed, rather than wait for a proposal or NPRM and then try to fight it.

Or on a mailed CD.. Both QST and Monitoring Times are available that
way, (among others) though unfortunately only with the whole year's
issues on a single disk. (i.e., it's only available at the end of the
year) Fantastic idea, I love it! No more realizing the article I want
is in the July issue - and I can only find June and August...

I wonder if broadband prices will ever drop to dialup levels?
Personally I have a very hard time justifying the (very) roughly
$200/year difference.

On the other hand, we may be fast approaching the point where the sum
total of the malicious executable emails being spammed into our
mailboxes and the critical updates necessary to protect against them
every day will take more than 24 hours to download via dialup!

That concept has been agreed in FCC comments by the ARRL,
QCWA, and other organizations besides NCI ... and the IARU
has recognized and resolved that continuation of the Morse test
requirement is not in the best interest of the ARS.

> or "it's a lid filter that keeps out CBers?"

That idea was rejected by the FCC both in 1990 and in
1999 ...

Even if the area distribution lines are buried, the wires come up
to (usually pad-mounted above ground) transformers and the
BPL signal will permeate all the wiring in your (and your
neighbors') house(s) ...

Underground distribution will help (some) but it doesn't actually
solve the problem.

Hmmmmm... It's interesting to speculate that you could get all
excited about doing this, build the required equipment, use your old
spark transmitter and coherer, and be talking with someone who is
using just the same equipment at the other end, except that his
equipment is "virtual". That is, he just uses processing power to
emulate a spark transmitter's emissions...

;-)

Thanks, but no thanks. I'd rather enjoy the challenge of
communicating through all the degradations that happen to waves
propagated through the air. It doesn't bother me one way or the other
if others adopt the technique, though.

Cheers,
Tom

Experienced, yes, but no professional test went above 20wpm, which I think may be the real reason for the speed chosen for Extra. The 1st class Radiotelegraph licence in the US had random blocks at 16wpm and plain language at 20wpm, whereas UK radio officers had to copy random blocks at 20wpm. I think 20wpm was standard around the world for testing ship's radio officers. Of course, they don't have to do it anymore.

Any chance the FCC commissioners are fully aware that BPL has no future,
and are just "jollying" the lobbyists along to get their campaign
contributions? After all, once they get the money, then:
"oops! Don't work like you said it did. Too bad- tough break etc."

Since you ask Clint...I'll try and explain it to you.

It is because you and your ilk are attacking those that enjoy the mode.
See how simple that is.

Now one more simple thing.....if you and your ilk would stop attacking those
that enjoy using Morse Code on the air, then perhaps the debate would be
more simple.

And finally.....if you don't. Then we take it personal. See ??

> holy bible.

It'll be very difficult to address your "analogy" with any degree of fairness or objectivity, as you have, in your comments, already made yourself out to be an antagonist; in more than just one area.

Suffice it to say, then that, while there are legitimate arguments from both camps, yours is not one of them. What this argument represents is, in fact, one of the reasons people with real "code problems" now find it impossible to move out of the arena of the "glorified CBers", in the minds of most old timers.

There's nothing "antiquated" about CW. It doesn't require a computer to send or receive it. It can be received under the most horrible of communications conditions. There's nothing "religious" about those statements. Simple statements of fact. Arguments against them come from those uneducated in the history of radio; Those who have never constructed an vacuum-tube oscillator out of junk-box components. People who think "BFO" is a reference to a group of rappers.

Nevertheless, I'm one of those individuals who, thanks to the nonsense ideas represented by the posting I am responding to, have a very difficult, if not impossible task ahead of themselves where license upgrading is concerned.

I suffer from Tinnitus, which makes listening to CW for any length of time impossible. The tones, in my case, cause migraine headaches, which are accompained all manner of unpleasent side-effects. As it is, I have to use several notch filters to even listen to most HF traffic, because of all the "digital" nonsense on the air these days. At one time I could send CW at speeds close to 20WPM, according to those who listened beneath the 'phones. Unfortunately, that skill, without the ability to "listen" is next to useless.

When I was a kid, there were special licenses (Conditional Class) and medical exemptions for people who suffer with real problems, but now, thanks to the ilk who have adopted the attitude that every desire should be sataified without exerting even the least amount of effort, and abused those special considerations, they have been done away with; no exceptions. The baby got tossed out with the bathwater. Now, I get to try and learn CW all over again, using a bloody blinking light, of all things, which will be a skill even more usless than my present sending skill.

So, the whole point of this response is to say "Thank-you" to you, Mr. No-coder, and all your friends who, with all your "analogies" and other hairbrained ideas, arguments, and excuse-making, have made the license upgrade process for folks like me, all that more difficult.

CW must remain as a testable qualifier, There's no other way to prevent ham radio from becoming a kilowatt-wasteland of room-tempreture IQs, trying to out-shout each other with bogus Southern accents and reverb.

So all you anti-code folks out there, thanks; thanks a lot; thanks for nothing!

As Carl points out, burying the distribution doesn't solve the BPL problem. The whole idea is to deliver the BPL signal to every outlet in your house - and your garage, and your neighbors' houses, and the street lights...

> I am still a strong proponent to
> buried power lines as opposed to powerlines on poles.

There are pros and cons to aerial vs. underground utilities.

Except in dense areas like the downtowns of cities where the cost of duct lines is comparable to that of poles, the installation cost of aerial is much lower.

Although immune to most weather problems, buried utilities are subject to flooding. They are also not immune to lightning.

Buried electric power distribution is less efficient than aerial. This effect increases with voltage and distance, too. Burying the drop from the road to your house isn't an efficiency problem, but burying miles of medium and high voltage stuff *is*.

The net effect of burying a significant part of the aerial network would be to require the construction of many new generating facilities (and their pollution, etc.) to make up for the losses of the underground network. A real triple whammy - higher first cost of the line, lots of new plants to build and pay for, and higher overall operating cost.

And buried lines make our antennas stick out that much more ;-)

I don't believe so ... I believe that the Commissioners genuinely want
another broadband delivery alternative to spur competition with DSL,
cable modem, and WISPs ...

Besides, the Commissioners are appointees ... they don't have to
raise campaign funds.

more likely its the bpl manufacturers hyping the technology to everyone and hoping to sell a bunch of it before the utilities find out how much it really costs, the users find out how poor it really performs, and the other users of the spectrum find out how much it really hurts.

> Sorry, that cannot "be asserted with equal logic."

Sure it can. I just did. The claim applies to all required subjects,
not just Morse code.
>
> First of all, that analogy is reduced to the absurd.

Not absurd at all. NCVEC is making the same arguments. Did you read
their position paper?
>
> Amateur radio IS involved with electronics technology and ALL
> radio amateurs are responsible for their amateur stations'
> technical requirements.

Of course. But that doesn't mean all amateurs like learning radio
subjects in which they have no interest, any more than all radio
amateurs like learning Morse code.

It's a plain and simple fact.

> Ergo, the regulatory tool of licensing
> MUST concern itself with radio-electronics technical knowledge
> to prove competency and responsibility to the Commission.

It's clear that some level of testing is required, of course. The
regulations, safety and basic theory must be known in order to stay
legal.

FCC, the 'expert agency' on the subject of regulation and testing
requirements, is convinced that the 35 question Technician test is
adequate proof of technical competency and responsibility for a radio
amateur to design, build, repair, modify, align and operate an amateur
station using any authorized mode, frequency and power level above 30
MHz.

So why is more written testing on electronic theory needed to do the
same thing below 30 MHz?
>
> Radio-electronics technical cognizance is NOT on any trial.

Yes, it is. All license test requirements must be justified. That's a
primary part of the argument against the code test. And it applies to
all required test.

> What IS on trial is a test for one MODE of transmission, on-off
> keying morse code.

Have you read the NCVEC paper?

There is nothing about status or rank in Part 97, nor in the FCC
decisions that led to incentive licensing and whihc have kept it
around all these years.

> THAT part of "incentive licensing" DID happen. It also

I'm asking opinion questions. You don't want to answer them, for some
reason. That's odd, because you're usually bubbling over with opinions
here.
>
> Nothing in current or past FCC regulations REQUIRES "building
> radios." The Commission allows the OPTION of doing so while
> nearly all other radio services require type-accepted radio
> transmitters.

Exactly! So why is it necessary to have all kinds of theory testing?
More hams use Morse code than build their equipment. The same logic of
"it's optional and therefore should not be tested" applies in both
cases.
>
> The Commission is NOT REQUIRED to be supportive or booster
> of any particular past or present-day specific activity or mode.

Then why require so much theory testing beyond what is needed to
understand the regulations?
>
> The Commission's ONLY lawful actions are to regulate ALL U.S.

I've had all amateur privileges for the past 33 years. You've never
had any. It's not me who needs to prove himself.

Then I'm disagreeing with the ARRL's, QCWA's, and NCI's position re. this
"barrier" concept. As a matter of fact, I offer myself as a living example
to the contrary. I'm neither eligible for the QCWA nor NCI, however, I'm
thankfully in a position where I e-mailed my respective Hudson section
candidates to let them know my postion wrt code testing and that my vote
partially (But in no small part.) depends on their position re. same.

Hello to all. Well went to take the element 1 and got a case of the nerves. I failed and was very frustrated afterwards. Practice practice. Anyways, my question deals with the csce for element 3 that I had. Yes, had. After the element 1 test, I put the certificate in my pocket along with my tech license. Well, I was so discombobulated after the test, I forgot to put the element 3 csce back in its very safe place. My wife washed the sweatshirt it was in. Is there any way to take the element 1 test again and get full General privileges or do I need to take the element 3 again as well. I took the element 3 in Maryland at a hamfest. It was not ARRL.

Thanks

It should bother you, Tom. This guy's response to the BPL problem was to give us software that simulates being on the air. Not only is it contrary to the spirit and purpose of the hobby, but worst of all, it encourages us all to be discouraged. It gives the weakesat among us an easy out, at the cost of adding still more to the hobby's difficulties.

So far, the idea of using non-ham links in order to "improve" the performance of amateur radio has been 100% consistent. In every case where it has been applied, it has managed to set back and denigrate the hobby, to some extent or another.

I am sorry to hear that this invasion of non-ham stuff into the hobby does not bother you. It sure should.

Dee,

I suspect you have not read my complete proposal. I'll attach a copy
at the end of this. After you read it your concerns should be
addressed. It is actually very accomodating of current hams of all
classes.

At the onset, current Novices and Technicians would have several
options:

1) Within the grace period they could upgrade to General or Extra, and
such license would be renewable indefinitely.
2) They could retain their current license and renew indefinitely.
3) They could take the "Class B" test and gain full access to all
amateur bands at reduced power. (This license would expire after 10
years, so this is eventually an "up or out" choice.)
4) They could take the "Class A" test and gain full access to all
amateur bands at full power.

Current General and Advanced would have these options:

1) Retain their current licenses and renew indefinitely.
2) Within the grace period they could upgrade to Extra.
3) Take the "Class A" test and gain full access to all amateur bands
at full power (functionally equivalent to choice 2).

Before the
Federal Communications Commission
Washington, DC 20554

In the Matter of)
)
Amendment of Part 97 of the Commission's) RM-10787
Amateur Service Rules to eliminate)
Morse code testing.)

To: The Commission

PERSONAL COMMENTS OF HANS BRAKOB, K0HB

OVERVIEW

These comments are submitted in response to the petition of NCVEC which requests elimination of test Element 1 (Morse Code) from the Amateur Radio service rules.

I. Discussion:

The instant petition requests the elimination of Element 1 (5WPM Morse code test) from the required test for General and/or Extra Class licenses in the Amateur Radio service.

I find no persuasive argument for continuation of this test, and support the petition to discontinue testing new applicants with Element 1.

I am concerned, however, that other elements of the qualification tests are not adequate to ensure a high level of expertise in new applicants to the Amateur Radio service, and propose changes in the licensing structure to ensure that all 5 points of CFR 47 paragraph 97.1 (Basis and Purpose) are reasonably addressed in the qualification process.

II Proposal:

I propose that no new applicants be accepted for the current license classes and that after some reasonable grace period, no upgrades be available in the current licensing structure.

A. New License Classes:

I propose that new license applications be available in two classes, namely "Class B" and "Class A".

The "Class B" license would have an entry-level test (basic regulations, safety, operating procedures, basic DC and AC electronics). This class would have full frequency and mode privileges, power limited to 50W output. The license would be issued for a period of 10 years, and be non-renewable. Holders of this license would be required to have 2 years experience as a licensee ("time in grade") before being eligible to upgrade to "Class A".

The "Class A" license test would be of a difficulty level similar to the current Extra class test, and would have full privileges at power levels up to 1500W, equivalent to current Extra Class license holders. This license would be issued permanently without requirement for renewal.

B. Status of current licensees.

Current licenses could be renewed indefinitely, and would retain their current operating privileges.

Current Novice, Technician, General, and Advanced class licensees could up grade to "Class A" at any time.

Respectfully submitted,

H. Hans Brakob, K0HB

There are still a few ships using Morse and a few shore stations, but you have to look for them really hard. I don't think there are any left in the USA.

The maritime services got away from using Morse for the same reasons railroads got away from steam locomotives: Cost to operate.

Back when the transition was being made, diesel electric locomotives cost more to build or buy than the equivalent horsepower in steam, and coal cost less than its diesel fuel equivalent.

But diesels did not require turntables, tenders, large amounts of water and distribution thereof, or disposal of ashes. The volume and weight of fuel for a given number of horsepower-hours was less for a diesel, and the fuel was a clean, easy to handle liquid. Diesel maintenance was less and in warm weather diesels could be shut down and started up on a few minutes' notice. Multiple diesel units could be coupled together for more horespower without requiring another engine crew to operate.

The First Class Radiotelegraph test was 25 WPM plain language and
20 code groups per minute, one minute solid copy out of five minutes
sent and corresponding error-free sending.

To qualify for that license, one also had to be over 21, have or
qualify for the Second Class Radiotelegraph Operator certificate,
and have at least one year in the aggregate (360 days "on the
books") of handling manual Morse traffic at a ship or coast station
open to public correspondence, civilian or military.

>whereas UK radio officers had to copy random blocks at
>20wpm. I think 20wpm was standard around the world for testing ship's
>radio officers. Of course, they don't have to do it anymore.

The UK requirements were the same as the US requirements for each
level of certificate - both contries' requirements derived from the
ITU Radio Regfulations and the International Convention for the
Safety of Life at Sea (SOLAS).

My reference for the UK requirements is: Handbook for Radio
Operators Working Installations Licensed by Her Majesty's Postmaster
General, General Post Office, London, 1961 - Appendix 4.

Yes...And of course that is where politics enters the scene.

Just because commissioners are appointed and don't have to raise funds
doesn't mean they don't pay any attention to the wishes of those who do.
After all, one needs to understand how did the commissioners get their
appointments and why. It isn't always because they're the top candidates
for the job!

Am I to understand that we are all going belly-up and cave in to BPL? Perhaps Mr. Stinson is trolling for the power companies. I, for one, have not given up the fight against BPL. Perhaps all the good Republican HAMS and SWLrs should write their congressmen and the President who has appointed the majority of the FCC and suggest that their right to the spectrum is on a par with that to bear arms. The FCC is effectively limiting our free speech by jamming our frequencies.

I view BPL as a means of restricting my access to shortwave freqs in much the same way the Chinese jam freqs from Nepal. But, of course, the present administration would never do anything to restrict our access to global views which may call their agenda into question.

I propose that we start sending electricity through our TV cables as a backup to our outdated electrical system. I am "putting down the marker" for PCTV, Power through Cable TV! We would only need one connection for our TVs, and VCRs.

Sorry Dave, your idea lacks the purity derived from the radio - ether - radio connection. Let's not divert our energy away from stopping BPL before it gets out of control. BTW, you wouldn't be a BPL advocate, would you?

IF you can get to the team leader where you tested he MAY have a
record of your passing the element three test and MAY be able to issue
you another CSCE. Since three VE's are required to sign it you'd best
contact him at another test session. Not all teams keep
as complete records as I did, so they may not be able to help you.
You may have to take it over. If so, next time make a copy of the
certificate.

Dick

I'm not discouraged. If BPL eats up the HF spectrum I'll be one of
those still able to communicate by listening to the CW signals change
the noise and copy the changes as code.
Don't laugh, I've done it before.

I guess there was some relevence of all this, and that in posting
this, our resident 14-year night-school radio god was trying to set
the example that he would want all aspiring electrical engineers to
emulate.

Unfortunately, it was yet just another "cuss-him cuz I can't
outwit him" rant of a very sick old man with no life.

Again.

It's not a matter of what I like or don't like, MinnieLennie.
You are a person wrought with confusion and an odd sense of what you
consider appropriate.

You publically announce your afinity for a person known to be a
pathological liar and then go about calling other people names and
making unsubstantiated allegations about them. Pretty silly, Brain.

If you enjoy placing your private parts in publically operated
pencil sharpeners, be my guest...but don't whine about it when your
parts get ground up when someone else turns the crank (pun intended)

> > Now...about those T5 logs and your "authorization" to operate in Somalia?

Sure we do, Lennie.

And we understand that advertisers tend to not spend their
advertising dollars in periodicals that they deem poor returns on
thier investment.

Your former "employer" would be of prime example.

> Advertising is not free.

Whoa...THAT was meaningful.

> The "knowledgeable" in here no little else but chatty gossip stories
> as to the "reasons" for a magazine demise.

"...no litle else..."

A TYPO! A TYPO! LENNIE'S MAD! LENNIE'S MAD!

I >>AM<< reasonably "knowledgeable", Lennie, and I "no"
this...Your previous employer is defunct..Kaput...out-of-business.
They are out of business because they could not continue to offer a
product that warranted the expenditure of those advertiser's dollars
because they tried to pander to a very narrow market.

Oh well. As good as the magazine may or may not have been, it's
out of business today.

It certainly beats storing piles of QSTs but at least at this point
one glitch is the cost. ~$40 for the membership then another ~$40 per
stale CD. No biggie but it's annoying. Our club monthly bulletins are
usually 10-12 pages long and are now being posted in the club website
as archived .pdf's. Saves a real bundle in publishing and mailing
costs and it eliminates the drudge labor in addressing, stamping and
mailing. With only a few pages per issue I don't even bother
downloading 'em, I just read 'em online and move on. More 'puter files
eliminated. Been hugely successful Dick.

http://www.gofrc.org/newsletter.shtml

Somehow the magazines will get into this game too. The QST product
reviews in the members-only website are a step in the right direction.
Maybe someday we'll be able to dump 'em in on a pay-by-article basis.

Only by those who insist on doing it for doing it's sake...IE:,
Lennie

> The insistance that a person know Morse Code at a resonable speed in order to
> be "real ham" is similar to religious fanatics, particualrly Christian
> fundamentalists, who think that a person has to believe in god in order to be a
> good and moral person. They cannot prove that their god even exists. So with
> the PCTA, they cannot prove that code is useful in light of communications
> advancements that have been made over the past several decades.

While one cannot prove of disprove the existence of any specific
deity, the usefulness of Morse Code has been proven for over 80 years
and is re-proven every moment of every day.

In this case the one's trying to prove a negative are those who
insist that Morse Code skills is a hold back to the Amateur Radio
service as a whole.

In particular read the writings of Lennie Anderson, a person who
never spent a minute as a licensed Amateur, and John Kaput-ski,
KC2HMZ, a scanner buff who makes assinine assertions about the
"collateral damage" that the Morse Code issue allegedly causes, but
who runs away at the first testing of his resolve of his convictions.

Is Morse Code skill and implementation the know-all and end-all
of Amateur Radio...?!?! Certainly not. If it was, none of the medium
in which this exchange is taking place would exist.

> Just as certain fundamentalists would like to turn the country into a
> Judeo-Christian theocracy, so would certain hams go back to an outdated
> communications scheme, simply because they think that Morse code is their
> "god."

People who keep making these assertions that some subset of the
Amateur radio condsiders Morse Code aas a "god" are idiots. Period.

I've known dyed-in-the-wool CW ops and have yet to meet anyone
who even remotely fits this description. I dare anyone to provide
even one thread of evidence to the contrary.

> To expect prospective hams to believe in the fairy tale of morse code is the
> the same as expecting people to believe in the fairy tales of the holy bible.

To expect that you exercised even a modicum of thought before bombing USENET with this bit of emotionally charged, baseless silliness is even more lame than my expectations of being molested by Brittney Spears in the next 24 hours.

It make's you laugh because you are ignorant of the facts, or you
refuse to accept them. The ignorant laugh at everything because they
know or understand nothing.

Morse Coded communications are occuring at this very moment.
While you try to "prove" your point, "Clint", by making these childish
assertions that Morse Code is NOT a "basic" form of communication,
Amateurs all over the world are at this very moment proving you wrong.

That you chose to refuse to accept it is obvious AND foolish, but
it's a freedom you are allowed under our chosen form of government.

> and quickly they MUST resort to name calling such as "lamebrained" because
> they have NO other cards in their hand.

Actually I have well over 1000 cards in hand, Clint...from every
continent, Antarctica, ships at sea, etc etc etc. Over 80% of them
confirming contacts in Morse Code.

More than half of those represent contacts with people in other
countries that might not have otherwise happened if not for the
commonality of Amateur Radio and Morse Code.

No accents...No ranting or chanting masses...Just two people
exchanging greetings.

> They have nothing to lean on.

Except truth and facts, Clint. Sorry you chose to not agree, but
you are welcome to tune the bottom end of the HF bands at your leisure
and hear for yourself. I realise you won't understand any of it, but
you can go ahead and spend the money on hardware and software to do
for you what you COULD do for yourself for no money and no hardware to
demend on.

> All they
> do is either put you on thier killfile list (read: I can't factually support

> dinosaurs start using "lazy", "stupid" and "moron" interspersed with various
> vulgarities.

Nope. I'd put "ignorant of the facts" in front of all of that.

> Clint
> Easily whipping the PCTA's

Not today.

Not on your best day.

You're like the new kid in the gym...Got a lot of those Walter
Mitty dreams about being another Ali or Foreman, but looking more like
Wally Cox or Barney Fife.

You know just enough to SOUND like you are "knowledgeable" to the
uniformed or easily impressed. Just like propagandists, you mix in
just enough "truth" to try and substantiate your "argument", yet
cannot overcome the facts.

Is continued Morse Code testing necessary for Amateur licensure?
Not administratively. However it is and will continue to be a viable
and useful communications medium for years to come. That you and
others choose to not take the time to learn it and just see for
yourselves is sad. That you and others continue to make assinine
assertions about it is childish and diminishes your credibility.

>Underground distribution will help (some) but it doesn't actually
>solve the problem.

Right now, the emissions I heard in the trial areas were weaker in areas of underground distribution. However, the losses are higher, so the utility would have to install its digital repeaters more often along the underground lines. It is a safe assumption that the industry that is asking the FCC for higher emissions limits will increase the power so that underground wiring is at those limits, too. We need to stay focused on what the rules would permit -- 30 uV/m at 30 m -- rather than individual implementations that may be below the limits in some cases.

Right now, the companies are probably using "stock" equipment for these marketing trials. When it goes live, you can bet they will develop higher powered systems as the most economical way to deploy in underground-wiring areas.

>source.
>But to my knowledge no BPL test site has done such tests.

I have done just that in Emmaus, PA and in Potomac, MD. The correlation between the noise heard and the download of files by users was perfect. NTIA did testing in the same two cities, but working with the utility companies to do just that -- turn the system on and off. And even after working with NTIA in Potomac, a PPL representative had the gall to tell a local newspaper reporter that Carl and I had heard "neon signs" in the residential neighborhood.

>What about harmonics? The BPL signals on the video sounded like they had
>pretty fast risetimes.

What sounds fast on a receiver will generate modulation sidebands up and down the band, but not harmonics. I have heard harmonics in the trail areas, perhaps down about 30-40 dB. Our 1500-watt stations can have 50 milliwatt harmonics, so we may not want to point our fingers in that direction. :-)

>Because different systems are being tried in different locations, proponents
>of each system will probably proclaim the *their* system doesn't have that
>problem - what you heard at the Podunk site is Brand X BPL.

Yup, been tried. Ironically, the least cooperative BPL manufacturer's system was actually the most benign. Had they worked with me instead of turning it off when they knew I was coming, their marketing folks could have made hay.

>likely get any comnpalints!

Yes, and if they continue not to generate signals on low VHF, they will continue not get any complaints. If they would reduce their emissions on the ham bands to about 60 dB less than FCC, amateur radio wouldn't get a significant amount of interference and ARRL could move on to new challenges.

>Go to the ARRL site for the complete list of known test areas.

Actually they aren't there (yet). I do have a pretty good set of documentation, including streets in most cases, but am not posting it. Although cooperation has been slow, we are starting to see some cooperation from some electric utility companies. One of the promises I make to them is that ARRL will work with them to help them understand the interference potential, but we will do so in the least-destructive way possible. Having hordes of angry hams swarming around the trial areas would not meet that goal.

Here are the known cities:

Birmingham, AL area
Cullman, AL (may be concluded)
Bay area, CA (5 GHz-only system!)
Atlanta, GA area
Honolulu, HI
Boise, ID
Potomac, MD
Cape Girardea, MO
Raleigh, NC
Briarcliff Manor/Ossining, NY (Westchester Cty)
Dublin, OH
Hyde Park, OH
Bethlehem, PA (new - just getting started)
Emmaus, PA
Whitehall, PA
Azle, TX (new, little data available)
Manassas, VA

If hams live in those areas and can help, contact me at w1rfi@arrl.org.

I thought innovating, finding new ways around problems, etc.
was "ham stuff." We used to do that alot.

> So far, the idea of using non-ham links in order to "improve" the
> performance of amateur radio has been 100% consistent. In every case where
> it has been applied, it has managed to set back
> and denigrate the hobby, to some extent or another.

When CW replaced spark, it was going to
"make the hobby too complicated and expensive to continue."

When SSB came on the ham scene, "Donald Duck"
was going to "destroy the hobby."

When FM and repeaters came along, they were
"against the spirit of ham radio. You might as well use a telephone!"

When Packet appeared, they brayed:
"those 'brrrrappp!' signals are denigrating the hobby!"

Throughout our history, hecklers and naysayers have been full of beans.
And they're full of beans now.

In the next rewrite, I'm taking out all references to BPL.
It was just one aspect of many; a way to dodge one giant
hairball the FCC is about to cough up on us.
But when you say "BPL," a few people go into some sort of "brain lock."
They can't even hear anything else.
Oh well... back to building the 611 QSO transverters...

But is is almost certain they they will claim success for their
"tests" in that "We got no complaints from low VHF users" when they
generated no such interference during testing-but are sure to when BPL
is widely implemented. That seems to make it very much necessary for
someone to document the parameters of what they DO generate so that
accurate information is available to challenge those later claims with
the facts when they make *inaccurate* reports of their of their
"successful" tests to FCC. It must be shown that the tests were
not properly done so as to actually test the system that will be
put into service.

That's a pretty substantial project-documenting the interference
generated at each -or at least certain critical- BPL test sites where
this could be the result. It then requires knowledge of local conditions
such as knowledge of what spectrum that is used locally by which users.

No wonder the BPL people are confident of a win. None of this is
accidental.

If they would reduce their emissions on the
> ham bands to about 60 dB less than FCC, amateur radio wouldn't get a

>

It's almost a certainty that the only way they will do that is if
they're challenged with collected data that causes FCC to require it.

I certainly hope that some of you have enough gall to challenge that
statement with engineering data, published in the same press.
Otherwise they win the battle with the public and your efforts are
potentially fruitless. Someone provided technical data for his
inaccurate statement, whether it was a company engineer or some
press officer. Such lies MUST be countered with accurate information
if there is to be a successful outcome.

What that tells us is that your code testing position won't stand up
to the test of "what is necessary for licensing" any more than testing
for technical knowledge. And vice versa.

You really should try to keep up with Fred and his cohorts. They're
about to leave you behind to enjoy, with the rest of us, what little
useful part of ham radio that will be left, if any, when you-all are
finished.

Amateur Radio Newsline™ Report 1366 October 17 2003

Amateur Radio Newsline report number 1366 with a release date of Friday, October 17th 2003 to follow in 5-4-3-2-1.

The following is a QST. A chance for pro-code to speak out to the FCC and a warning to firefighting officials about the hazard of BPL. Find out the details on Amateur Radio Newsline report number 1366 coming your way right now.

(Billboard Cart Here)

**

RESTRUCTURING: MORSE CODE AND THE FCC - ROUND II

Well we told you it was going to happen and it has. We are talking about the next round of rule making requests to the FCC on the topic of what to do about Morse code testing. Most of this group want to keep some form of CW test. Amateur Radio Newsline's Bruce Tennant, K6PZW, takes a look at what the FCC wants you to read and comment on:

--

If you were not happy with the first round of Morse code rule making requests, maybe you will find something more to your liking in this latest batch of seven that the FCC has released for public comment.

We have already covered the most prominent of them. That being the one from FISTS -- the international Morse code preservation society. FISTS wants the code retained and all aspects of the ham radio exam process made allot tougher. And in this area, FISTS is not alone.

In is petition, Frank Napurano, K2OKA, calls Morse the purest, most accurate, efficient, reliable and economical form of radio communications ever devised. He tells the FCC that its essential to keep at least the current 5 word per minute CW test in the interest of public safety, the preservation of a radio art and as a tribute of support for a prized and respected avocation.

Also in favor of keeping some form of Morse exam is the Puerto Rico Amateur Radio League. While it wants the FCC to do away with the current 5 word per minute test for General class it says to keep it for those going for an Extra ticket.

James Roux, W4YA, wants the FCC to eliminate the 5 word per minute code test for a General class license, but like the Puerto Rico Amateur Radio League would require Extra class applicants prove they

can do Morse at 15 words per minute. Roux also wants to cut the number of licenses to only two. Under his proposal nobody would loose current privileges but only the General and Extra class would continue to be issued.

Meantime, Robert Rightsell, AE4FA and Harry Kholer, NZ0PU also want 5 word per minute Morse testing continued but would institute a points score system for passing a ham radio exam. Under the Rightsell / Kholer plan, an applicant could earn up to 24 points on Morse testing.

And Joseph Speroni, AH0A, has a novel idea. Only test hams in Morse who want to use the mode. Speroni would have the FCC delete the CW exam for those who want to operate only phone. If a ham wants to operate High Frequency Morse, Speroni says they should pass the current 5 word per minute exam.

Last but by no means least comes Charles Young Jr, AG4YO. He is asking the FCC to delete the 5 word per minute Morse exam for the Technician Plus license, but keep it as a requirement for General and Amateur Extra exams. And like the other petitioners, Young has some specific ideas regarding other aspects of ham radio licensing as well.

These seven petitions have been designated as RM 10805 through 10811. Commentary cutoff on all of them is Friday, November 7th.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, reporting.

--

You can comment on one or all of these rule making petitions by taking your browser to the FCC Electronic Comment Filing System. Its in cyberspace at www.fcc.gov/cgb/ecfs. (ARNewsline™ from FCC website)

**

RESTRUCTURING: QRZ SAYS KEEP THE DISCUSSION ON TRACK

In a related story, the operators of the QRZ.com website have drawn a proverbial line in the sand. They say that any attempts to take a Forum discussion that is not directly related to the code versus no code debate and turn it into such will result in those posting being removed. The operators of the website say that this is not a stance by QRZ.com either for or against Morse code. Rather it is a their way to keep a given subject being discussed on track. The QRZed website is in cyberspace at www.qrz.com. (QRZ)

**

RESTRUCTURING: PNG GOES CODE-FREE

I'm Don Wilbanks, AE5DW, with breaking news out of the South Pacific. Dateline Papua New Guinea where that nations Telecommunications Administration, PANGTEL, has declared Papua New

Guinea to be the latest nation to become code free. This as it orders the deletion of Morse Code from the qualifications necessary for its amateurs to have access to the High Frequency bands.

According to Rick Warnett, P29KFS, the decision to drop Morse was actually made back on June 10 th but not widely publicized until now. June 10 th was before the 2003 World Radiocommunications Conference that decided Morse testing was no longer mandatory world wide and retaining it would be the decision of each individual administration.

Warnett, who is the IARU representative for the Papua New Guinea Amateur Radio Society says that the official announcement will take place within the next few days. When it comes, Warnett says that some 30 to 40 new Papua New Guinea full call hams will have international communication available to them. (Q-News)

**

DX PROBLEMS: A FOLLOW-UP ON ANNOBON ISLAND - 3C0V

A little more information has surfaced on why a long awaited Dxpedition suddenly left the air. Jeramy Boot, G4NJH, has the details:

--

The Spanish and German group that had been operating as 3C0V from Annobon Island off the West Coast of Africa were forced to close down early in the morning of last Saturday, the 4th of October. The DXpedition was scheduled to have continued until the 10th of October.

Gabriel 'Gaby' Mardiros, OD5NJ, the 'pilot' for the 3C0V DXpedition, says that the group is "fine" but that they had received "a serious warning not to use any of their radios". The reason for the enforced closure was not yet known."

--

Some reports indicated that local authorities had given the DXpeditioners less than 24 hours to pack up and get off the island. More on this story as information is made available. (GB2RS)

**

Break 1

From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world including Peoria Amateur Radio Club net serving Peoria Illinois.

**

WRTC: 2006 GAMES IN BRAZIL

It has been announced that the next World Radiosport Team Championship, or 'WRTC', will be held in Brazil in 2006. The last WRTC event took place in Finland in July last year.

WRTC brings together the top HF contesters from all over the world to compete on - as far as is possible - a 'level playing field'. WRTC 2006 will take place in Florianopolis, capital of Santa Catarina State in southern Brazil. The event is open to everyone: competitors and spectators alike.

I'm Jeramy Boot, G4NJH, in Nottingham. (GB2RS)

**

RADIO RULES: WORLD'S BROADCASTERS JOIN ANTI-BPL CHORUS

A subcommittee of an International Telecommunication Union panel of technical experts responsible for terrestrial broadcasting issues has joined a growing chorus of concerned parties about the interference potential of power line telecommunication. According to the ARRL Letter, ITU Radiocommunication Sector Sub Working Group 6E1 has been looking at BPL. Now it has expressed the view that interference produced by systems employing powerline data transmission as well as by Industrial, Scientific and Medical equipment and short-range devices, will compromise broadcast reception. (ARRL, CGC)

**

RESCUE RADIO: BPL VS. FIRE RADIO COMMUNICATIONS

Meantime, hams who are also firefighters or have access to the local fire Department should consider enlisting their help in fighting the rollout of Broadband over Powerlines. This, due to the heavy use of the 33 and 45 MHz radio bands by fire departments.

Writing to the QRZ.com super site, Jim Walsh, K3JIM, says that some fire departments are not technically savvy and think that interference is really blind spots in the radio coverage. Walsh, who is a firefighter and truck engineer Red Lion, Pennsylvania, says that broadband interference is not easily recognizable to fire personnel as say an interfering DX station may be to the trained ear of a ham radio operator. He says that the fire service is used to dead spots and may not know why they exist.

Walsh cites one situation in the area where he lives and works. He says that it is well known that when in the vicinity of certain gas station convenience stores in his area that one cannot use the radio for a few hundred meters. He says that in this case the problem is the Point of Sale system that records the gas transactions and that the lines running to the pumps are not shielded and radiate computer hash like an antenna.

K3JIM has lots more to say about the problem BPL can be to low-band fire radio systems. You can read it all on line at www.qrz.com (K3JIM via qrz.com)

**

ENFORCEMENT: YOU ARE NOT SUPPOSED TO OPERATE THERE

In regulatory news, two hams have been asked to explain why they have been heard operating on law enforcement frequencies. The FC's Daryl Duckworth, NN0W, has more:

--

Duckworth: "Tom Christman, KB2NAV, of Albany New York, has received an inquirey as to operations on the Albany County Sheriff's Department emergency frequencies without legitimate purpose last December.

Along similar lines, Joseph Hutchins, KG4SXD, of Swannanoa, North Carolina, is being asked about operations on police frequencies in February of this year. That of the Black Mountain Police Department in Black Mountain North Carolina."

--

Both hams were given 20 days to respond to the FCC's query. If the agency finds that rules have been violated, each ham could face a fine of $7,500 to $10,000, license suspension and revocation.

**

ENFORCEMENT: AMATEUR TOLD TO KEEP HAM GEAR OFF CB

The FCC has written to James Perryman, KC8KOU, of Toledo Ohio. This, regarding continued complaints involving his alleged operation of non type accepted radio gear on the 11 meter band. Again, the FCC's Daryl Duckworth, NN0W:

--

Duckworth: "The letter went on to say that the operation of non-certified equipment on CB frequencies, such as Amateur equipment and linear amplifiers will result in a monetary forfeiture in the $7500 to $10,000 area, as well as the in-reim seizure of all non-certified equipment in cooperation with the United States Attorney in his jurisdiction."

--

The FCC also told Perryman that his station is subject to inspection at any time by Commission personnel.

**

ENFORCEMENT: YOU CANNOT SAY THAT ON THE RADIO

Meantime, Federal regulators have announced plans to fine a Detroit radio station $27,500. This, for an allegedly indecent broadcast on a popular afterboon show back in January of 2002.

In a Notice of Apparent Liability to Monetary Forfeiture, the FCC said a broadcast on Infinity Broadcasting's WKRK-FM included explicit and graphic sexual and excretory references during separate discussions with nine separate people. Such language is banned under FCC rules.

Infinity was given 30 days to contest the notice. In earlier filings with the FCC, the company argued that no penalty could be assessed. This is because Infinity believes that the FCC's definition of indecency is unconstitutional.

**

ENFORCEMENT: LA REPEATER OWNERS ORGANIZE AGAINST ALLEGED UNLICENSED OPERATOR

Repeater owner operators in the Los Angeles Californias area are taking action to keep transmissions allegedly coming from Jack Gerritsen, the former KG6IRO, from being retransmitted. In are rare show of cooperation, system owners and their control operators are taking repeaters off of the air rather than permit the signals from a station identifying with the call sign KG6IRO call sign from being rebroadcast.

If the name Jack Gerritsen sounds familiar its because we have reported on hin several times before. Gerritsen was licensed for a very brief period back in 2001. His ham ticket was set aside by the FCC's Wireless Telecommunications Bureau after the agency learned that Gerritsen had been convicted in 2000 on charges of interfering with Los Angeles Police Department radio transmissions. Gerritsen recieved a jail term for the interference conviction. He was paroled but sent back to prison after allegations surfaced that he had been operating a radio transmitter without a license. He was released before serving his full sentence as the result of a Federal court order dealing with overcrowding in California state prisons. His application for a ham radio license remains in the FCC's pending file and a hearing on the matter will be scheduled at some future date.

Be that as it may, Los Angeles area repeater owners are not waiting for the FCC to move in the matter. They have taken matters into their own hands and are acting to keep the signal claiming to be KG6IRO from being repeated. (ARNewsline™)

**

HAM RADIO BUSINESS: 73 MAGAZINE FOLDS

73 Magazine is the latest casulty in the weak world-wide ham radio business economy. On Monday, October 6th, founder Wayne Green, W2NSD, e-mail several friends to tell them that 73 Magazine has

ceased publication after completing 43 years.

The reason for 73 going away? Green claims that the hobby is slowly dying as a result of a lack of new hams. In turn the the industry that supports Amateur Radio is fading away as well. Green says that without sufficient advertising the magazine couldn't continue.

--

Green: "The book sales have kept 73 going for the last few years, but book sales have dwindeled way, way down and there was no way to keep 73 going. The ad sales are down and the reciepts from the ad sales are down even weorse than the ads."

--

W2NSD says that it was an interesting 43 years and that he hopes to write about it some time. In the meantime he plans to continuing his essays on his website for those subscribers who mainly bought the magazine to read them. Thats in cyberspace at www.waynegreen.com.

No word what will happen to those with outstanding subscriptions to 73, especially hams who bought lifetime subs at a bargain price when the magazine first started up. Green always said it would last through his lifetime or that of the purchaser, but it looks as if W2NSD and a number of lifetime subscribers may have outlived 73. We expected it of Green. His phonetics are W-2-Never-Say-Die.

You can hear W2NSD talk about the demise of 73 on this weeks RAIN Report. Its available on-line at www dot rainreport dot com or by telephone at 847-827-7246. (ARNewsline™)

**

HAM RADIO BUSINESS: NEW KIDS HAM RADIO MAGAZINE TO BE PUBLISHED

If the ham business is as bad as Wayne Green says, you would not know it by Larry Mahlberg AA0BY. As 73 sails into the sunset, Mahlberg has announced his own new ham radio magazine targeting the younger generation.

According to Mahlberg, he and his crew are putting together a brand new monthly publication called "Hamtastic Kids" that will debuet on November 15th and be available by subscription. To get it started, AA0BY is asking your help by submitting material for publicatoon such as Amateur Radfio poems, stories, puzzles and even ham radio recipes. He is also looking for articles written by kids on such topics as Morse code, DX'ing, ragchewing, fox hunting, contesting and hamfests.

But thats not all. The Hamtastic Kids is offering a free years subscription for best logo that a youngster submits for use in the Magazine. Submissions of logos, articles and information requests go to Hamtastic Kids, in care of Larry Mahlberg, AA0BY, P.O Box 1634

Eugene, Oregon, 97440 (W8HDU)

**

BREAK 2

This is ham radio news for today's radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**

RESCUE RADIO: APRS JOINS THE CHARLES REGATTA

Almost two decades after it was developed by an Amateur Radio operator, Automatic Position Reporting System equipment is being used for the first time by the hams on board the rescue launches at the Head of the Charles Regatta. Amateur Radio Newsline's Norm Seeley, KI7UP, reports:

--
Bob Bruninga, WB4APR, is considered the father of the Automatic Position Reporting System thats known in ham radio circles by the acronym of four letters APRS. And from October 17th through the 19th a team of up to 30 operators will be on the air using it and other modes to operate a safety communications net for the annual Head of the Charles Regatta.

According to Bruce Pigott, KC1US, the addition of APRS is very significant because it allows automatic tracking of a ham radio station by sending Global Positioning Satellite information along with the voice or other data on the radio signal. This should permit precise dispatch of land and river emergency units to rendezvous with the launches.

KC1US says that communications coverage begins three hours before the first race on Saturday and an hour before the first race on Sunday. This, will allow medical and public safety communications coverage of practice runs and gathering crowds of spectators.

For the Amateur Radio Newsline, I'm Norm Seeley, KI7UP.

--

This year's communications support covers all aspects of the regatta. This includes preparations, practice and competition for all three days of the event. (KC1US)

**

HAM RADIO CONFERENCES: SVHFS IN GEORGIA IN 2004

The 8th Annual Southeastern VHF Society Conference will be held in Georgia on April 23 and 24, 2004. This, at the Holiday Inn Hotel & Suites in Marietta on the outskirts of Atlanta. More information will be posted the Society webpage. The u-r-l is www.svhfs.org. Qustions go by e-mail to rover@wireco.netb (SEVHFS)

**

HAM RADIO IN SPACE: VU-SAT LAUNCH DELAYED

Turning to ham radio in space, the expected launch of India's VU-Sat has been delayed indefinitely. The AMSAT News Service quoting a release from the launch agency says that during the thermo vacuum test deviations in the performance of the ham radio payload were. Because of the need to correct these abnormalities, the launch will take place at some later date. VU-Sat was to be a passenger with a remote sensing satellite being orbited onboard from Sriharikota launch range later this month. (AMSAT)

**

HAM RADIO IN SPACE: HAPPY BIRTHDAY AO-40

AMSAT is sponsoring an AO40 Birthday Bash to celebrate the satellites 3rd Birthday. The party continues through November 17th. Email Bruce Paige, KK5DO, for more details. His e-mail address kk5do@amsat.org (AMSAT)

**

INTERNATIONAL - GERMANY: DL3KWF RESIGNS AS DARC VP

On the international scene, word from Germany that Hardy Zenker, DL3KWF has resigned from his post as Deutscher Amateur Radio Club vice president He has been replaced by Ingobert Dittrich, DK9MD, who was elected to the post. Dittrich is well known as a former representative of the broadcasters to numerous committees across Europe. The Deutscher Amateur Radio Club which is Germany's natioonal ham radio society holds elections every two years. (DARC)

**

INTERNATIONAL - HOLLAND: ARTIFICIAL BROADCAST ISLAND TO DISAPPEAR

A significant piece of Dutch broadcasting history may soon cease to exist. Media Network reports that the Hollands Department of Public Works has announced its decision to dismantle the artificial platform in the North Sea known as R-E-M Island. The island was constructed in 1964 at a cost of 9 million guilders by a team of entrepreneurs who used it to broadcast radio and television programs to the Netherlands under the name Radio Noordzee and TV Noordzee.
The full story is on-line at http://www.rnw.nl/realradio/features/html/rem031009.html (Media Network)

**

INTERNATIONAL - BRAZIL: CELEBRATING SCOUTING ON THE AIR

And Brazillian club station PY3ARD is on the air as ZW90S for the renmainder 2003. This, to celebrate the 90th anniversary of the Gerge Black Scout Group which happens to be the oldest Scout Group in Brazil. According to the RSGB, the ZW90S call will be aired for the first time during the upcoming CQ World Wide contest. If you work it, QSL via PY3ARD. (G2RS)

**

ON THE AIR: W6AQ AND K6IPV TO RAROTONGA OCT. 21

Hollywood producer Dave Bell, W6AQ and his close friend Don Lisle, K6IPV are headed to Rarotomga. This for a combined mini-D-Xpedition and contest operation. The pair will arrive on the island at about 9:00 PM local time on October 20th. They hope to be on the air by the afternoon of the 21st operating mostly SSB with some CW and possibly RTTY and PSK-31.:

--

Bell: "They will hear us calling CQ on whatever the highest frequency where there is propagation which is going to be during the daytime perhapps 10 meters; 15 meters hopefully and 20 meters certainly. Nighttime we will probably be dealing with 20 meters, 40 meters, 80 meters and perhapps even 160 meters. We will see if we can talk to anybody on that band."

--

Bell will operate as ZK1AQT and Lisle will be on using ZK1IPV. Both will be on as ZK1SSB for the CQ World Wide SSB Contest and will tear everything down on the afternoon of October 28th. Their QSL Manager is Norm Friedman W6ORD whose address is good in just about any Callbook. (ARNewsline™)

**

DX

In D-X, TM9AF will be on the air through October 26th to celebrate the 25rh anniversary of the Auxerre Ham-Expo. About 20 operators will be on the air with the special callsign on 160 to 6 metres using CW, SSB, PSK, RTTY, and Slow Scan TV. They will also operate 2 meters to 1.2GHz on CW, SSB FM, RTTY, and ATV. If you make contact, Q-S-L as directed on the air. (GB2RS)

Stefano Frau, IS0WBT, says by way of e-mail that special event station ISZ0A will be on air during the upcoming CQ World Wide SSB contest. This on the on 25th and 26th of October. Stefano says that the operation will take place from Mt. Cresia in grid square JM49QG. Operation will be in the multi-multi catagory and the operators will

be looking to talk to all of you. QSL direct to IS0MYN. (GB2RS)

**

THAT FINAL ITEM: DUTCH STUDY SUGGESTS ISSUES ACCOMPANY 3G CELL STATIONS

And finally, can cellular telephones make you more alert? Some researchers in the Netherlands think so. Bill Pasternak, WA6ITF, has more:

--
A study by Dutch researchers has found some interesting side effects from certain cellular telephone base station radiation. Initial results show that electromagnetic energy transmitted by base stations for the new third generation or 3 G wireless networks caused subjects in double-blind test groups to experience tingling sensations, get headaches and have feelings of nausea. On the other hand, when the same subjects were exposed to signals from current mobile networks, no negative impacts were found.

But here's the kicker. When the same people were exposed to both types of fields -- that being 3 G plus current networks -- cognitive functions including memory and response times showed measurable improvement. Put simply, the subjects became more alert when exposed to both fields. The report did not discuss the modulation schemes nor the specific RF power densities that were involved in the study, and obviously allot more research needs to be done before anything conclusive can be known.

For the Amateur Radio Newsline, I'm Bill Pasternak, WA6ITF

--

Now it has to be pointed out that these are early results. As such, while they are interesting, are yet to be confirmed. You can read more in cyberspace at www.msnbc.com/news/974005.asp (CGC)

**

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB and Australia's Q-News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline @arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), P.O. Box 660937, Arcadia, California 91066.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I'm Ken Butler, W1NNR, saying 73 and we thank you for listening." Amateur Radio Newsline(tm) is Copyright 2003. All rights reserved.

There's another point to this that I haven't seen anything on yet. It seems to me that the faster you can copy the easier it gets (to a point, of course). 13 wpm is a definite PITA to copy, considering they generally use 10 WPM weight and try to run it together to get the faster 13 wpm. I usually have trouble copying anything slower than 15 wpm, and I don't like 15, either. Too slow.

Back around 1989 some friends of mine and I were conducting code practice sessions on one of the local repeaters. We had one young man who was going for his Advanced (he had passed all the written tests, including Extra at 12 years old...smart young man!) and tried for the 13 wpm test numerous times, failing every one. My friends and I were perplexed, since he regularly copied 20 and 25 wpm in our practice sessions (we threw those speeds in without telling anyone once in a while).

One night before one of his tests, you could tell he was really discouraged and ready to give up, so I pulled him aside to another repeater and told him of a technique that a friend of mine told to me. I told him that, when the test came up, he should take the first test, which of course was the 20 wpm Extra test. I told him he should not expect to pass it, but to do his best to copy it and, when the 13 wpm came up next, it would sound slower and he should pass it with ease. Of course, he passed the 20 wpm with a perfect copy. He was on the repeater the following night gloating and bragging. ;-)

Back in the '90s I was driving an 18 wheeler over the road (no, I had my license WELL before I ever drove trucks). I liked to operate cw while driving and naturally had to be able to copy code in my head. 20 wpm and above, the code ceased being letters and formed words. At that time I was up to around 35-40 wpm, all copied and remembered in my head.

13 wpm has always been a PITA for me to copy, and I think for the reason I stated above. Everyone talked about the "13 wpm barrier" and it sure was. I think 15 wpm would have been a much better speed, and easier to attain, besides. But, as some have said, that's a moot point now. I'm glad I don't have to take the 5 wpm test. Someone would have to keep waking me up for the next letter.

These are the number of unexpired FCC ARS
licenses held by individuals on the dates listed:

As of May 14, 2000:

Novice - 49,329
Tech - 205,394
Tech Plus - 128,860
General - 112,677
Advanced - 99,782
Extra - 78,750
Total - 674,792

As of October 15, 2003:

Novice - 32,977 (decrease of 16,352)
Technician - 257,303 (increase of 51,909)
Technician Plus - 64,686 (decrease of 64,174)
General - 141,313 (increase of 28,636)
Advanced - 82,589 (decrease of 17,193)
Extra - 104,670 (increase of 25,920)
Total - 683,538 (increase of 8,746)

Folks,

Recently there has been mention of a paper by KL7CC titled "Amateur Radio in the 21st Century". It can be downloaded in Word format from:

http://www.qsl.net/al7fs/NCVECplan.doc

That document spells out what the NCVEC leaders are thinking about in terms of changes to the license structure as a result of WRC 2003.

Interesting and a very good point. If newcomers could just be
convinced to learn the code fast instead of at a smail pace that
they'll have to unlearn later to progress, it would be so much
easier. That's the reason for the Farnsworth method. You learn to
recognize the sound of a character instead of counting dits and dahs.

One should listen to code that's faster than you're able to copy and
pick out what you can recognize, which gets to be more and more
of it as you go along, session after session. Concentrate but relax.
Before you know it, you're hearing it in words instead of letters.
That's how I got my speed up when I went for Extra 35 years ago
I highly recommend listening to the W1AW code practice sessions
where they start out fast and work on down to 5wpm.

It's surprising how slow 20wpm sounds after 35 and 30.

That's where listening at considerably faster than you can
copy comes in. You'd be surprised how fast your abilities
improve. W1AW code practice sessions are good.

>
>Right now, the emissions I heard in the trial areas were weaker in areas of
>underground distribution.

That's to be expected if you stayed on the street. If you drove up to a house, the racket might be a lot more.

The real killer test would be to have a "typical" amateur station in a neighborhood served by underground utilities carrying BPL. Say, a 2 story frame house on a half-acre or so, with a G5RV or dipole at 50 feet strung over the the house.

Wonder how much BPL garbage that setup would pick up?

>However, the losses are higher, so the utility
>would
>have to install its digital repeaters more often along the underground lines.
>It is a safe assumption that the industry that is asking the FCC for higher

A question arises - 30 m from what? If every piece of house wiring has the BPL signals on it, in many locations you cannot get 30 meters away.
>
>Right now, the companies are probably using "stock" equipment for these

If they were to do what it would take to reduce their emissions by 60 dB,
the system flat out won't work ... it only works passably as it is, which is
why they want to up the power. (A former user in the PPL trial area told

me - in front of the reporter - that when he had the system working (before his service died and PPL couldn't/wouldn't fix it) he was getting "Maybe 4x dial-up speeds ..." He clearly wasn't impressed. Let's hope that there's a lot of that going around.)

Bill:

I wouldn't say so. I'd call bringing a bow and arrow to a gunfight
bad judgement -- but I don't plan on getting into a fight with either.
Why? My better judgement tells me not to. It also tells me that
code testing has value within the ARS.

Far be it from me to suggest deliberate QRM to BPL, but I think it would be nice if everyone could run full legal in areas with BPL trials. Or at least as much QRO as they could muster. Maybe if we know an area where it's happening we could all descend with linears and set up a multi-multi QRO contest station. Perhaps with 1500w signals on three or four bands we could get their speed down to 14.4k?

This is what comes from a dysfunctional FCC made up of lawyers instead
of technical people who know something about the radio spectrum.

I've never done spectral analysis of any of the myriad noise types
so generously generated by virtually all public or privately owned
electrical supply grids, but I'd wager there are plenty phase
modulations involved. That alone will be enough to give them plenty of
work to do trying to clean things up so as to attempt to approach
theoritical throughput. And it'll probably be ongoing work.

Actually, we might be better off allowing it to run for awhile
before getting it shut down! :^)

Having given this document due consideration, I can't say that it changes my mind about anything re: code testing. I find this one passage particularly interesting:

"Morse will probably retain most of it's exclusive band segments, at least for now. We are not addressing this issue at this time. This may change in the future. Several countries no longer have exclusive segments, but depend instead on voluntary band plans. In fact, our 160-meter band works this way today, with surprisingly few problems"

Maia et. al. are obviously leaving the door wide open to reduce or eliminate exclusive CW/data segments, even possibly moving toward a totally "open" bandplan on all amateur allocations. I cannot support this. The main pressure for band segment re-allocation will come primarily from users of SSB. This is simply because it's the easiest mode for any amateur to implement in his/her own station, and if there should be an increase in the total number of licensed radio amateurs, that's where there will be a need for more "lebensraum."

Another quote:

"Will we lose something because we will no longer have the knowledge that all hams can at least understand and send CW, even if very slowly? Maybe, maybe not. You would be surprised at the number of applicants I see that actually want to learn CW - they think it will be fun. There's a novel concept - someone learning a skill because it is fun, not because the government says you must do it."

If this is so, where is the objection *from those hams who _want to learn CW_* to being code tested? I've seen the vast majority of new hams who have taken

the time and effort to learn the Morse code approach the code tests with eager enthusiasm, and a great sense of satisfaction once they succeeded.

Again quoting:

"Obviously, removing the Morse test requirement will make it easier for thousands of interested persons to join our hobby. There are many, who for whatever reason have a real, not imagined, problem with learning the code. Call it stage fright, a psychological block, hearing problems, poor recognition skills, whatever you want; there are indeed those who literally cannot master the code, no matter how hard they try. Lazy, you say? Anyone can make it to 5 WPM, you say? They just don't try, you say? Apparently you have not participated at hundreds of exam sessions. I have. I have seen grown men and women with tears in their eyes, frustrated, angry, sometimes back next time, sometimes giving up on ham radio altogether. Where's the gain in having someone give up?"

I have some personal experience here. I've had all the above mentioned "problems"
with learning the code, and have made all the same excuses. However, I now know
what my problem was -- I didn't *want* to be a radio amateur bad enough to overcome these so-called problems. It was only after I took a much different personal approach, involving a more mature attitude toward the requirement and making the personal determination that there must be some good reason for it, that I was able to finally succeed. In so doing, I had a much larger world of amateur radio opened for me. Moreover, having succeeded in learning the code, I subsequently found myself using it -- a lot -- and enjoying it immensely even though I never thought I could.

Again quoting:

" Are you proud that you "made it"? Can you not find something that another person can do that you would find extremely difficult if not impossible? Could you win the Tour de France bicycle race - even if you trained every day for the rest of your life? Could you invent the Laser? Could you paint the Mona Lisa? Not that painting a work of art or riding a bicycle has all that much to do with radio, it's just to point out that while you may have been able to master the code with some degree of success, that doesn't necessarily mean that everyone has the same ability as you. I would argue that the ability to master the code has no apparent connection with how "good" a ham a person is. What we want, I think you will agree, is someone who will respect our traditions, follow the rules, bring enthusiasm and vigor to the hobby, and make a positive contribution.

So, who's to say that mastering Morse code skills makes a better ham? I would not be so arrogant as to think such a thing. Every time I get to feeling superior, I look around, and guess what? - - - I can find someone who is better at something, anything, than me. I can also name several individuals that I think are in one way or another "better hams" than I, better operators, better engineers, better at some aspect of our hobby than me. Might that be true with you too?"

I can honestly say that overcoming my objections to learning the code did, in fact, make me a better ham, for the simple reason that it made that mode available to me *as* a ham. Were it not for the requirement to take the code tests, I would never have gained that capability, and it is my belief that new radio amateurs in a "no code test" licensing environment will simply bypass this mode entirely. I'm not saying that some tiny minority of them won't try it and even gain useful proficiency at it on their own initiative or with the encouragement of dedicated Elmers, but I don't think it very likely that it will happen in anywhere near the same kind of numbers as it had under the previous set of licensing standards. I fear that there will, in fact, be a progressive loss of the total numbers of hams who know and use the Morse/CW mode, eventually zeroing out. This is too great a loss to our service, for I believe that the many well-known benefits and advantages of the Morse/CW mode will be just as relevant to amateur radio in the 21st Century as it was in the twentieth.

Final quote:

"CW is a great mode. It's fun. I enjoy it. And, it's time to move on. We no longer require applicants to draw schematic diagrams, demonstrate how to neutralize a triode vacuum tube amplifier, lots of other things. Lets be gentlemen and give CW a decent, respectful, wave. Remembering our old friend, but looking forward, not backward. Morse code will live forever. As long as someone cares about the history and mystery of early radio, and lots of hams do, CW will be around. Like anything else, when a person finds he or she has a need to use Morse code, they will learn it. Want to work DX, or QRP, or weak signal VHF, or Moon-bounce? Better learn the code, or you won't have a very satisfying experience."

Wiley has stated that it is incumbent on those of us who know and use the Morse/CW mode to encourage newcomers to learn it and love it as much as we do. Therefore, as a licensing requirement, it only deserves a "respectful wave" in the future. Well, unfortunately, in this age of advanced technology where our own equipment is no longer within the technical capabilities of average radio amateurs to build and/or service, we can pretty much say the same about all the technical written examination requirements as well. He goes on for pages about his new entry-level license class, which, IMHO, is unnecessary. The present Technician syllabus is proven to be achievable by people from all walks of life. If there are any serious RF or electrical safety issues to be addressed, I would submit that perhaps we need to add some emphasis there, rather than further reducing licensing standards simply for the nebulous purpose of allowing more and younger hams to "get their feet wet"
as it were.

I think the primary challenge ham radio faces, now and in the future, is it's relative lack of publicity. It is safe to say that the majority of people these these days simply cannot relate to amateur radio, mainly because very few of us simply don't relate to the concept of "radio" in the first place. We turn things on and they work. Our electronic devices, RF-based or not, are totally taken for granted. I believe that what we need to do to incite interest and curiosity in radio communication is to keep doing things "the old way" as far as learning and licensing are concerned, but to bolster that with

some good public information about Amateur Radio as a concept in it's most basic terms. This is usually done in terms of it's public service potential, and that's fine and dandy, but we also need to emphasize the elements of learning, exploration, and just plain fun. Fortunately, young people are still quite receptive to such things, and, ironically, usually embrace the challenge of learning the Morse code much more willingly than those of us who simply want to flex our consumer muscles and make our voices heard in far-away places after throwing a pile of money at the necessary technology. However, this will only doom us to creating an ARS filled with more and more of the kinds of jaded, technically uninvolved "hams" that could become problems on-the-air. If the equipment manufacturers were producing very low cost (I mean a couple of hundred bucks, maximum) low-power basic transceivers, preferably in kit form, which would be challenging enough to put together but still virtualy guaranteed to work well, they'd sell like hotcakes to exactly the audience we wish to address -- young people. In addition, putting them on the air, on the HF bands and primarily in the CW and data modes, would create a demand for things like fewer antenna restrictions in housing developments and, ultimately, more capable (and expensive) equipment for when skills and technical knowledge advanced to that stage. However, we won't get there if everyone keeps saying "Ham Radio -- what's THAT???"

I am convinced that ensuring the future of the ARS has nothing to do with licensing standards, including code testing. It has everything to do with our public image -- or almost total lack thereof. The NCVEC petition doesn't address this issue at all. Like everything involving Fred Maia, W5YI, it's all about the code and getting rid of code testing. I don't think he will find his answers to the nature of Amateur Radio in the 21st Century by looking there.

Well, he sure doesn't sound like a very "gay" person to me.

Actually, sounds more like a very miserable sort, but I suppose it's difficult to come up with a "miserable lobby" that anyone takes seriously (mind you, why anyone takes the "gay lobby" seriously is even more amazing).

"living room"

It was one of the phrases used by Germany to justify it's expansion. Since
it's been a few years since I studies history, I don't recall if it was WWI
or WWII.

"easiest mode to implement" is not quite the same as "easiest, simplest
mode, with the easiest to build equipment"

Here's the difference:

"easiest mode to implement" means open the box, plug in the radio, connect
antenna, and push the mike button.

"easiest, simplest mode, with the easiest equipment to build" means simpler
circuitry requirements, only an on/off "switch" to key the circuitry rather
than the more complex microphone unit, and so on.

Good question.

Back in May 14 2000, the total number of Generals/Advanceds/Extras (license
classes with lots of HF/MF privileges) was 291,209

On October 15, 2003, that total was 328,562, an increase of 37,353. About 12.8%
in 3-1/2 years.

Thanks for the URL, Jim

It is an interesting proposition. I've stated before that I can't justify the *need* for CW, but I'll admit in my years of operating I never (and some may have) experienced the jamming, swearing, or whatever on CW. Perhaps the mode is too difficult for those of limited mentality who like to swear; more likely they don't have the instant gratification of other folks yelling back at them over a microphone.

One thing seems to stand out to me. If we are to attract and *keep* them, we will likely have to allow some HF access, preferably on bands that will have some dx capability. Although cw was the only mode on hf when I had my novice ticket (1962/63), it was fun to communicate with states half a continent away on a regular basis - if not other counties entirely. If it is only VHF and above, we may experience a quick increase for folks wanting to use the service as MURS or CB (but only for their family). If this service was limited to those still in school, it might serve an excellent purpose. As you may remember, the old novice license (back when it was originally created) was *not* renewable and was good for only one year. Perhaps the license could be extended until the individual reached the age of 18.

As far as power limits go, they changed the limits years ago for the novice from 75 watts input to 100 watts output (I think ... hmmm ...??). The reality is that most commercially available equipment runs 100 watts out. There are a few exceptions of 150 and 200 watts and, of course, there are some qrp rigs and a few that will do 20 watts or so. Reality forces me to question a limit that will likely be exceeded anyways and teach the individual that rules are to be broken :(

Amateur radio does indeed compete with the internet and, upon thinking it over, we will likely want hf access (likely including phone privileges) if we wish to really "infect" new folks with the radio bug.

Nor I!

What I find interesting, too, is that the CW/data parts of the bands are always
referred to as "exclusive CW" with no mention that all of them on HF are also
shared by data modes. In fact, there is very little mention of data modes at
all.

>The main
>pressure for band segment re-allocation will come primarily from users of

>much to do with radio, it's just to point out that while you may have been
>able
>to master the code with some degree of success, that doesn't necessarily mean
>that everyone has the same ability as you.

Note that passing the 5 wpm code test is being compared to world-class achievements in the worlds of art, sport, and science. That's just not a valid comparison at all. 5 wpm is more like riding a bike at 5 mph for a mile on a level road, painting a recognizable human face or assembling a flashlight.

More quotes
>
>So, who's to say that mastering Morse code skills makes a better ham? I
>would
>not be so arrogant as to think such a thing.

It's equally "arrogant" to support either side. Which is to say, not arrogant at all.

>Final quote:
>
>"CW is a great mode. It's fun. I enjoy it. And, it's time to move on.

What exactly does "time to move on" mean here?

> We

Heck, the General has been achieved by a six-year-old and the Extra - the old prerestructuring 5 written tests Extra - by an eight-year-old.

> If there are any serious RF or electrical safety issues to be
>addressed,
>I would submit that perhaps we need to add some emphasis there, rather than
>further reducing licensing standards simply for the nebulous purpose of
>allowing more and younger hams to "get their feet wet"
>as it were.

The biggest problems I have with the entry-level proposal are the removal of "radio law" questions from its test and the free upgrades for Techs and Advanceds.

The code test stuff is predictable and, IMHO, not the most important thing in the paper at all. What's far more important is the "what happens after the code test goes" stuff, which contains some very good ideas and some very bad ideas.

I think I already know and understand Jim's game. He built an
Elecraft kit, then professes to have engineered and built his own
amateur station.

"Time to move on:"
A phrase used by Democrats as a means to change or stop a debate,
when the illogic, stupidity or immorality
of their positions are exposed.

It has all been explained to Jim before. But it's more important for
him to think that we want to eliminate the use of Morse, eliminate
protected spectrum, expand phone, this, that, the other...etc. Vast
right-wing conspiracy and all that.

It's important for certain segments of our society to always be
offended and outraged.

>

Right! It's apparently codified in the code-banner's rulebook- Say nor
do anything that will in any way interfere with The Agenda. And
acknowledging that there are NO exclusive CW HF subbands is a primary
part of it. In fact, it';s clear that they would like to do completely
away with *ll* subbands. Hey, why not SSB yakkers wall to wall, like
it is "uop there" above 27 mhz?

It IS curuois that they jump from "Hey why don't you Luddites get
out of the 19th century and jumo on board our Advanced Digital Train,
to "Lets do away with all subbands and give everyone with the mildest
of itnersts all privileges everywhere to yak into a microphone"!!!

Can you say obfuscation???

It's so very lame I find it difficult to express a proper
counterpoint! How do you deal with such expressed ignorance coming from
a longtime ham who claims knowledge and experience in the very subjects
he finds so reprehensible? It is not only contrary to the vast body of
knowledge and experience existing among the vary large number of other
similarly qualified hams but defies logic and common sense.
Thoughtful newcomers instinctively know that it's all wrong!

Can we say "Incrementalism"??? That's the full intent and has always
been! It's nothing new- this movement has been afoot in some form and at
some level longer than the near-48 years I've been a ham. But only
fairly recently has such a stubborn entity as W5YI decided to dedicate
his entire being, it appears, to killing off Morse code in ham radio.

Yo gotta wonder what it was that scared him when he was a kid.
Did he run into a W2OY on CW??? I don't think so!

If I'd had to buy a storebought rig when I got on the air as a Novice
it would have never happened, at least not anywhere as soon as it did.
When I later DID buy a very modest manufactured transmitter and
receiver, both used, it cost most of my summer's earnings between high
school years.

You DO seem to have a problem with the thought process.
Sure, Jim recently did buy and build a K2 kit. But what
you missed, among many other important points, was that
he has always clearly stated that it WAS a kit project,
not to be confused with the *several* project stations that
he has designed and built, and USED ON THE AIR over his
near-40 years as a ham.

But then, that's what we've learned to expect from you.

Jim,

It looks like we are on the road to some deflation in the numbers.
AE4FA has posted numbers gleaned from his research into the FCC
database concerning renewals of the Technician class (no code variety)
and has found that almost 97% of them are not renewing. There is only
a small data window to draw from however, as the first people who held
this license class are only starting to reach the end of the grace
periods. He had a way to filter out licensees who had upgraded. I think
there was 8 months of data when the finding were posted. This could be
why we are about 4,000 licensees down from the peak you mentioned.

Actually the term originated a century before Adolf did his thing. It goes as far back as the mid 19th century. When the Kaiser used it against the other European countries. Again in WW1 and later picked up by da fuerer.

I re-downloaded the file and forwarded it. Anybody else have trouble? Let me
know and I'll email it to you. It did take a bit to get it downloaded.

Maybe that Emmaus BPL test site is the culprit, Carl ;-)

All writers assume a certain level of knowledge on the part of their target readers. The same is true for this newsgroup. Most here are aware of the code testing debate, so there isn't any reason to restate the issue each time something is said. As for NCI, the names of many groups don't exactly reflect the group's publicly stated goals. For example, the Red Cross doesn't go around painting crosses red and the Salvation Army doesn't fight religious wars.

==========
Perhaps not from a summer cottage ,but remote operation of HF stations has
been done in California and Hawaii
since the mid 90s .Access and operation is through a hand-held VHF radio.
Even a rotator can be operated remotely.
The brainchild of a aviator/engineer living in the Brea (California) area
it was/is called a Super-Station .
However in this scheme rx and tx are co-located.
The system was elaborately explained by its designer/implementor in 1995 at
a meeting of the Fullerton Amateur Radio Club.

I can understand that with antenna restrictions/ prohibition in urbun areas
and a possible emergence of BPL / PLC / PLT ,people are looking into
alternative ways to communicate on the HF bands.
Fortunately in a number of countries BPL et al has already been rejected by
the authorities , Japan and the Netherlands come to mind. I believe also in
the UK ,it is highly unlikely that powerline comms will be accepted.

ARRL's drive to block the introduction of power line comms in the USA ,by
means
of 'competent (engineering) reasoning' ,must be applauded.

>Wonder how much BPL garbage that setup would pick up?

My guess is about S7 at 100 feet spacing between houses, on frequencies that BPL was using. That is assuming they didn't crank up the power to meet Part 15 limits so they could go farther and/or have more immunity to noise.

>A question arises - 30 m from what? If every piece of house wiring has the
>BPL
>signals on it, in many locations you cannot get 30 meters away.

Correct. The limit is for 30 meters distance. There are cases where it can't be measured there, and the FCC allows measurements to be made at other distances, and extrapolated to 30 meters. But here's the kicker -- they allow the extrapolation at a 40log(distance ratio), unlike virtually every other country in the world. That translates to an inverse-to-the-fourth power ratio. Think any of the Part 15 guys make measurements at 3 meters that COULD be made at 30 meters, just to gain that extra 20 dB?

>Is there stock equipment for BPL yet? Or could they be using prototypes?

At this point, PPL is going commercial in the Allentown area. I have offered several times to show them exactly what they are getting themselves into, but their BPL engineer does not answer my email.

That is kinda' odd, because if I were about to invest millions of dollars and a national organization came along and told me that there was a major problem with it, then offered to drive 200 miles to show me, I think I would want to hear what they had to say and would find an hour's time.

Any PPL shareholders here? :-)

> weekends away.........

Well Folks, the "relatively new ham" Jim is referring to is me. I too
am priviliged and honored, especially so to have worked my Elmer as my
first CW contact. Was passing Element 1 easy? Yeah, once the
characters started flowing. Was working another AR station OTA using
CW for the first time easy? Nope...but it gets better, and more so
every time out. The common denominator is the feeling of
accomplishment and the associated pride that comes from both
experiences. If any other newbies are out there reading this, DON'T
let ANYBODY minimize this factor. Experience it for yourself and then
YOU be the judge. Betcha you'll like it.

So when folks talk about having to demonstrate Morse "proficiency" to
get on HF, don't believe 'em. Memorizing 43 Morse code characters and
passing Element 1 at 5-wpm is nowhere near any level of "proficiency"
needed to effectively get OTA. What it did do for me though was allow
me to make an educated decision as to whether I wanted to pursue it
any further or not. The new QSL cards on the wall speak for themselves

re. my feelings about CW's merits.

Worked a fellow in Rochester, NY (From LI, NY.) with a QRP rig putting out 2.5 Watts into a dipole, simply fantastic. I'm fortunate enough to live in an antenna friendly neighborhood, HOWEVER, no antenna restrictions could ever keep me off the air with this type of QRP capability available. I'll bet many a wire get dropped from windows to work 40 at night. (Very affordable too.) That's just one example of a practical real-world benefit, there are more that Jim's already touched on. Something to think about.

> And this ham is the kind who will share what he has learned with others and
> repeat the cycle. Test or no test.

You betcha! My first customer is in first grade.

Me for sure, and I do have alot invested. What you guys need to do is come with some Technical Whizzard Stuff to deal with this. I mean come on, you got all those New No-Code Technical Whizzards to pull from. If you cant think of any, try Karl, or NCI, Im sure they have the technical knowledge to combat this.

Not a surprise really. All this happened before the cellphone craze got going. Why bother with a license, especially when they really didn't care for ham radio, when all they wanted to do was order a pizza and check up on the wife/husband.

Dick,

Can you say "You're distorting the facts"???

Both I and Bill Sohl have repeatedly stated the the ONLY agenda
for NCI is to eliminate the code TEST ... you will notice that NCI's
Petition for Rulemaking doesn't attempt to modify the sub-bands,
expand SSB allotments, or anything of the sort.

It would be nice if you could stick to the facts, but that doesn't
suit YOUR agenda, does it?

I am not the one who "own's up" to having an archived
pathological liar as my "mentor".

I am not the one who claims to have operated from some rare DX
location with an alleged "say so" from someone who didn't have the
authority to let me do it anyway.

I am not the one who doesn't know the difference between a
"commander" (an officer in the Armed Forces assigned as the senior
officer of a unit) and a "Commander" (a Naval grade equivilent to Lt
Colonel in the other branches).

I am not the one who doesn't know the difference between
"authority" and "acceptance".

> I see it differently.

As I said...people with your particular dementia usually don't.

To quote a particular Naval veteran, "Have Fun With This One
Now".

Was there ever any doubt, Dick? Can we expect anything less from a dweeb who can proudly lay claim to looking up to a known pathological liar as his "mentor"...?!?!

What an idiot he is. As if I NEEDED to have my suspicions verified...

If nothing ELSE would have clued Sir Clueless in, it would have been the fact that Jim has been discussing his other projects for years...

Of course The Clueless One only tries to scan through posts long enough to pick up key words he's looking for and ignores the rest.

Since you claim to look to Lennie as a mentor, I will remind you
that it is he who claims anyone making typos in a USENET repsonse is
"getting mad". I will leave it to you to figure out what you did
wrong (according to Lennie's rules).

As far as John goes, I imagine him like a bully I knew as a
kid...He was all big and brash...Right up until someone smacked him
back.

John has beat a hasty retreat because unlike you and Lennie, I
doubt that he LIKES being spoon-fed his own USENET foolishness. You
should take a hint. I know you won't since you obviously like being
beat over the head again-and-again with stuff YOU provide.

So don't blame me, Brain, for any "Avenging Angel" stuff...You
just keep giving me so much raw material to work with.

Thanks.

> Why would they use a different BPL system than the one they used successfully
> for their marketing trial?

Once again, one of us missed something, and once again I don't think
it was me. I appreciate that you're pretty well loaded yourself these
days, Ed. I'll explain. And while we're on the subject of of your work,
thanks for all you do for us!
It was noted by one of the local BPL investigators writing here
that the bandwidth currently in use in the Emmaus test area
is only from around 3 to 22 mHz. That was said to be that because of the
very few subscribers using the test system, the full 2-80 mhz is not
needed. But when fully implemented, the bandwidth will need to expand to
the full 2 through 80 mHz to accomodate the full complement of broadband
users anticipated to use the system when fully loaded.

Following along with that piece of information - it's easy
to see that the BPL advocates have already shown they will obfuscate the
situation (the "neon sign" assertion when it was really BPL noise).
Assuming they are well aware they will need all the technical tricks
they can play on FCC to get their system approved, they probably will
fail to make full disclosure on exactly what bandwidth their test
systems utilized. "We received no low VHF complaints" when their
limited test system didn't operate nor generate any RFI in that part
of the spectrum. But of course the fully operational, loaded system,
expanded out to the full 80 mHz, will indeed generate that interference.
But the test results, assumed to be complete, won't show it.
The FCC is clearly friendly to their case anyway, and won't be looking
for too many "minor" details to block the path to approval. So the
lack of testing in the low VHF range is never made an issue to the
approval process - UNLESS someone, who had done their homework, forces
it to be.

By the time the full range of frequencies is in use with the
interference they "didn't get any complaints" on, because it wasn't
present during the limited spectrum tests, it won't affect their FCC
approval in any way - they'll already have it. And good luck getting it
revoked at that point because of some "minor" lack of full disclosure of

the limited tests. After all, it might be years after approval before the system is fully loaded with users to the point that the full 2-80 mHz spectrum is needed.

If I'm in error in understanding of all this, I would appreciate the correct information.

Dick

I got no response to my private email so I'll ask again here in public.

What's wrong with going after those engineers who are obscuring the
technical facts of BPL? If a doctor or lawyer messes up bigtime and
people suffer for it, he can be called to account. I see no reason
whatever that those engineers behind the hiding of the facts of BPL

can't be cited to answer to their state licensing boards for it. I see it as entirely possible that the negative publicity alone might change the nature of the situation-what investor owned company wants to answer to stockholders for spending many millions of dollars on such a technically flawed plan which is most likely to lose money because of a plan based on flawed engineering and deliberate bypassing of the rules?

Another possible benefit of taking action against engineers would be the fact that FCC *should* be far less likely to approve a BPL plan that had been shown IN PUBLIC to be technically flawed, with citations given such as the "neon sign" diversionary.

If that engineer won't answer your remails, send him a registered letter. If he doesn't answer that, see if he'll answer to his state licensing board. To do any less is to allow them to win by default. Of course you'll have to have your engineering all in place.

Ask Brian. He says all the myths are Morse and No-code has no mantra.

You seem to be missing an essential point: the "client" of an
engineer is the employer. If the employer does not complain of
unprofessional conduct, there's no case.

Similarly, the licensing boards take action only if there is a
complaint of unprofessional conduct from one with standing, namely
the employer. The one exception is if the engineer violates a
criminal statute and the complaint is brought by the District
Attorney.

>If a doctor or lawyer messes up bigtime and
>people suffer for it, he can be called to account.

Only on complaint by someone having standing - the client. No
complaint, no case.

That's neat. The employer can violate all sorts of statutes, and
involve the engineers, and no one but the employer can do anything about
it! VERY neat!

>
> Similarly, the licensing boards take action only if there is a
> complaint of unprofessional conduct from one with standing, namely

So the adversly-affected public can have no standing in complaining
about the fraudulant acts of licensed persons-actions that directly
affect the public???

What sort of a system of regulation is this? It's almost useless!
It licenses professionals to act contrary to law and standard industry
professinal process!

The one exception is if the engineer violates a
> criminal statute and the complaint is brought by the District
> Attorney.
>
>
>>If a doctor or lawyer messes up bigtime and

So you're saying the the public is afforded no protection whatever
in licensing matters unless individuals compl;aining are are directly
involved. Nice!

So inform the stockholders of this fiasco and let them handle it.
If they are made aware of the facts it would seem they would be
interested in at least looking into the matter since their investment
dollars are at risk.

As usual the law is written to protect everyone except the public.

>It looks like we are on the road to some deflation in the numbers.

Perhaps. There are lots of factors influencing the numbers right now. For example, a new Tech Q&A pool was put in place July 15, and since then the number of new Techs has plummeted.

>AE4FA has posted numbers gleaned from his research into the FCC
>database concerning renewals of the Technician class (no code variety)
>and has found that almost 97% of them are not renewing.

I question his methods.

>There is only
>a small data window to draw from however, as the first people who held
>this license class are only starting to reach the end of the grace
>periods. He had a way to filter out licensees who had upgraded.

Before I'd accept such a low renewal rate, I'd like to see how the data was processed. There are all sorts of procedural pitfalls in trying to figure out renewal rates. For example, people change their names and addresses frequently, making tracking difficult. The 1994 changes to the vanity callsign rules resulted in a lot of Techs getting vanity calls - which carry with them a renewal.

>I think
>there was 8 months of data when the finding were posted.

And how many were issued in that time?

>This could be
>why we are about 4,000 licensees down from the peak you mentioned.
>
Perhaps. OTOH, look at how many Techs are renewed in a given year, then figure what 10% of the current Tech-Tech Plus population is. You'll get a much higher renewal rate than 3%

>amateur station.

Wrong.

I've done both. In fact, I designed and built several stations before ever
hearing of Elecraft.

Let's see...

I've built-from-scratch (no kits, no carbon copies of other homebrew) in my
home workshops, at least:

5 receivers
5 transmitters
3 transceivers
4 transmatches
12 power supplies
4 TR systems
5 pieces of test equipment
various shack furniture, antennas, power cables, control systems, etc.

The above list does not include:

- surplus units converted/restored
- manufactured equipment restored/repaired/modified
- kits built or rebuilt

I've worked several of the regulars here on rrap using my homebrew rigs.

I can often be found on or around 7040.

Pictures and descriptions of a receiver I built for about $10 back in the early
1970s are on the HBR website. It's only one in a long line.

<snip remainder of self-righteous indignation>

well, I have another perspective; did you ever stop to think that there
wouldn't be
such a prevailing anti-french notion if they would not only QUIT trying to
halt our
attempts to fight & end terrorism in the world, not only STOP being nothing
more
than a nation that uses the UN... (which, by the way, if you didn't know, we
fund
a quarter of the UN's budget; our total basic input, ASIDE of all the extra
few billions here and there we give, adds up to MORE than contribution of
France, Germany and Russian COMBINED?).... to thwart so many of our
righteous and morally correct war against the islamic extremists that, if
given thier
way, would have YOU killed? Did you ever stop to think that maybe if France
began standing up for herself and HELPING in this dreadful ordeal, along
with the
other sniveling weasel nations of europe, that we could wrap this up quicker
and
faster instead of them being a root cause of what is one of the darkest
periods
in human history to be stretched out FUTHER in terms of time and bloodshed?
Just what did all of France's attempts to thwart our removal of saddam and
put another knife in the back of terrorism GET them, huh? Another bomb in
Paris! And did you EVER think that that maybe if France finally began to
learn
her lesson about appeasement, along with all the other nations in Europe
that

had to bear the dreadful weight of world war II on thier backs, just *maybe* relations between that nation and a few others would improve with us? That just
maybe we would truly be the allies instead of this mass-perpetrated delusion
that we are already?

Kuddos to the axis of weasels for coming around on the last UN vote... I know
they didn't do it because of a change of heart, but at least it's a start in the right
direction. I'll give them *that* much. Now if they'll just open thier eyes and
wake up to the world as it really is and begin to help us, things will be much better
for everybody; Civilized Nations: 1, Islamic Extremist bloodthirsty murderers: ZERO.

You should go after the company. The engineer almost certainly cannot answer you directly as it would be against corporate policy. He has to get it approved by his boss and the corporate lawyers. Keep in mind that no matter what he/she may have recommended internally to the company, management makes the decisions based on perceived profit. The engineer may have not hidden a thing but management very well may have (remember the first shuttle disaster). However, remove the perceived profit, and the project will be dropped like a hot potato.

As far as going to the state licensing board, that will almost certainly fail. There are only a limited number of circumstances where engineers are required to be licensed and this probably isn't one of them. Very few engineers in this country are licensed.

Actually there are very few cases where an engineer even needs to be
licensed. An electrical engineer working for a utility probably does not
need to be licensed.

> [snip] So you're saying the the public is afforded no protection whatever

Again, it is unlikely that the engineers working for the utility have to be licensed so the licensing board couldn't do anything anyway.

I did some exploring around in the FCC database and it appears that there is
a way to determine these things. When a person changes call signs or
upgrades and so on, the old one is marked as "terminated" not "expired".
The term "expired" appears to be used only when a person has neither renewed
nor upgraded. This is based on checking the call signs of persons that I
know upgraded. Changing a name or address does not result in either an
"expired" or "terminated" on the call sign. So if one uses the the feature
so search on the Amateur Radio Service rather than the basic search and
types in dates and checks "expired" and specifies the license class, you
should get those and only those that were not renewed. The numbers are
indeed rather large. Note however, it isn't marked as "expired" until the

two year grace period has elapsed from what I can determine by exploring the data base.

So using the time period 10/18/2000 through 10/18/2001, here are the number of expired licenses that pop up.

Novice - 5645 expired in that one year time frame
Tech - 3811 expirations
Tech+ - 3687 expirations

This is a total loss of 13,143 of licensees in the year from 10/18/2000 to 10/18/2001.

On the other hand it does not appear possible to determine the actual number of truly new licenses from the data base as far as I can tell at this time. You can select "Grant date" but that gives you all newly issued licenses and updated licenses (i.e. renewals, adress changes, etc).

I might have posted this before, but if I was a prospective ham at this juncture, I would probably wait and go for the biggist bang for the buck - that is to wait and just go for the General ticket after the Morse code test is gone.

Then again, maybe I wouldn't myself, because I personally think its going to be four years til things get wrapped up in this area (dropping the CW test). But others think it will only be a few months.

And that is my take on the drop.

Similar situation is my son bought a copy of Finale software. He was surprised that it offered a free upgrade to the new version, which is due out in a few months. I asked him if he knew that there was a new version out in two month, would he have bought this one? Of course the answer was no for such expensive software. He would have waited, and Finale's producers would be in a real sales doldrum right now - no one would be buying.

Like any CB radio is currently constructed.
All we have to do now is "channelize" the HF bands.

This is incredibly bizzare! Having to defend one's hombrewing as
defined by what one has designed and built.

Its all good, whether building an Elecraft kit or designing your own
radio; modding a surplus unit or etching your own circuit boards.

Most of what Brian Burke writes here is bizarre. In this case, though, he's
simply wrong about my homebrewing.

>Having to defend one's hombrewing as
>defined by what one has designed and built.

My homebrewing speaks for itself, as anyone who has worked me on-the-air knows.
I currently have two HF transceivers fully operational at the present time:
Elecraft K2 #2084 and the Southgate Type 7. I also have some of my older
homebrew projects in storage.

The Type 7 is almost ten years old now, while the K2 was assembled in the
spring of 2001.

I define "homebrew" as "built from scratch". That includes everything from carbon-copy stuff like the G2DAF sets to one-of-a-kind designed-from-a-blank-sheet-of-paper projects. "Homebrew" does not include kit assembly, surplus conversion (unless it's so extensive that it's really a new project, as in "Cheap and Easy SSB"), or restoration/repair/modification.
>
>Its all good, whether building an Elecraft kit or designing your own
>radio; modding a surplus unit or etching your own circuit boards.

I agree 100%! It's ALL good - but it's not all homebrew.

Heck, some restorations require more skill, knowledge and effort than an equivalent homebrew because the restorer wants to match the original exactly, where the homebrew *is* the original.

My particular specialty in homebrew is to reuse "found objects" rather than buy new parts - mostly to save money, but also because some parts are almost impossible to find new. There's also the consideration of not wasting usable parts.

How can we claim that amateur radio is a "fundamentally technical radio service" if we all use only manufactured radios?

> licensing board.

Engineers are not required to become Registered Professional Engineers
and most of us are not P.E.s. Phil is a P.E., I'm not. The state
boards can spank Phil but they can't spank me because I'm outside
their jurisdiction. Also note that the FCC does not require engineers
to have P.E. licenses in order to participate as technical experts in
regulatory matters.

Phil is 100% correct about an engineer's employer having the bottom
line responsibility for his/her actions (there are exceptions). If an
engineer screws up and somebody gets hurts some way or another the
engineer might be fired by the employer but the lawyers and regulators
will hold the the employer responsible for the screwup, not the
engineer. The legal and medical industries play different ballgames in
this respect.

So the PP&L engineer who is playing silly games can completely ignore
and/or mislead anybody he chooses without suffering any legal
consequences at all, P.E. or not. Within the limits his employer sets
on his actions.

> To do any less is to allow them to win by default.
> Of course you'll have to have your engineering all in place.

He does. But we still have to continue supporting his ongoing efforts
and beasting on the FCC as private citizens and as ARRL members.

Well, there is a big gray area there. I've modified some equipment prett
extensively, and used some self designed circuitry in it, so I'm not
sure what to by your def. That's okay, as long as I get to smell that
rosin core solder smoke!

> Heck, some restorations require more skill, knowledge and effort than an
> equivalent homebrew because the restorer wants to match the original exactly,

I'm restoring an SB-200 right now. And it just got harder because I
can't get the green/gray crinkle paint anymore. The place that sold it
doesn't sell it any more. 8^(

Anyone here know of a source of this paint, or better yet, how to
homebrew crinkle paint? I've heard of painting on a case fresh out of a
hot oven, but I have XYL, safety, and consistency problems with that.
Theres no way I could get a whole SB200 case painted before the
temperature dropped too moch to crinkle it. And the wife certainly isn't
too keen on my putting things in the oven, after what I did to it while
making a telescope. And how safe is spraying solvents on a hot aluminnum
surface? 8^)

Yup, I get old equipment, tear it apart and file the stuff away in boxes.

Appeals to basic guy stuff like reusing things, and tearing stuff apart.

> How can we claim that amateur radio is a "fundamentally technical radio

Perhaps - but that means no ham radio at all until the changes take place.
Which could be years. How interested is somebody who will wait that long?

Also, if FCC does just dump Element 1, newbies will still need to pass the Tech
written.
>
> Then again, maybe I wouldn't myself, because I personally think its

>
ARRL's guess was two years, which means July 2005. I used to think that was way
too long, but every day it looks more reasonable. The way things look, now,
with all those petitions out there and ARRL not yet weighed in on anything, it
could be next spring before an NPRM shows up. Note how long ago some petitions
were filed (like that 'refarm the Novice bands' idea) that are still hanging
fire.*

And if 98-143 is any guide, such an NPRM will have a long comment period
and...well, you get the idea.

Then ya got NCVEC talking about a whole series of petitions if/when the code
test goes, which to me sounds like doubling the hill.*

You watch, Mike - if/when the code test is dropped, we'll have a surge of
upgrades and new hams for a while - then things will settle back to about where
they were before restructuring.

73 de Jim, N2EY

* special bonus trivia section - how did the phrases "hanging fire" and "doubling the hill" originate?

Which means that Dick could not have been talking about you, Bill or NCI when
he wrote of a "code-banner's rulebook" - whatever the heck that was supposed to
mean.

>... you will notice that NCI's
>Petition for Rulemaking doesn't attempt to modify the sub-bands,
>expand SSB allotments, or anything of the sort.

Exactly!

This thread is meant to be about that NCVEC paper - particularly the parts that do *not* involve the code test. Dumping the code test is a completley different thing from widening the 'phone/image subbands.

If the 'Novice' subbands are to be 'refarmed', I say they should be reused primarily for digital modes, unencumbered by most of the occupied bandwidth and bit/symbol rate limitations of today's rules. Maybe have a flat rule that the mode has to have occupied bandwidth under, say, 10 kHz. Proper documentation as already required by FCC rules, of course. Wanna try out some digital voice ideas, high speed data, "PSK-3100", Pactor 3, or whatever? Just fit 'em into 10 kHz and have fun.
>
>It would be nice if you could stick to the facts, but that doesn't
>suit YOUR agenda, does it?
>
Which facts? Dick didn't accuse you or NCI of anything in that post from what I can see.

The fact remains that the NCVEC paper contains some inaccuracies like the reference to "exclusive CW subbands". Another inaccuracy is the claim that the General and Tech used the same written test up until the Tech lost its code test
(the writtens were actually split almost 4 years earlier).

>[remainder of Dick's inaccurate statements and inuendo deleted]

Unless I'm mistaken, he wasn't talking about you, Carl.

I assume that remark stems from the fact that you live in one of the
yellow-bellied gutless coward nations over there. Hey, here's an idea;
why don't you guys start demanding your leaders quit bowing down
and kissing the rear end of terrorists and middle eastern dictators? Just
how can you *stomach* to live in a nation that just sits around and
gets hammered and attacked and blasted instead of standing up for
yourself and doing something about it? Or is making remarks about
newgroup people having no brains simply *safer* because you're
on the other side of the globe at a computer terminal and the terrorists
are right up in your face?

You'll have to excuse me, I just can't fathom why anybody would
take the path that you guys over there have. Perhaps that is why europe
is slowly being left behind economically in the world and the shift of
industrial & economic strength is headed away from you guys and towards
eastern asian nations. I guess they'll be the future, if you're going to be
*the
past* in your hemisphere.

LOL, well said.

Don't forget, too, when you drive to the testing site to take the morse code test you have to first hand-crank the engine of your horseless carriage to get it started.

OOOPS, i'm sorry, that too is outdated. They have invented electrically driven starters since then. Isn't it neat how old ways are replaced by new more efficient & useful ones? *OOOOP*, my bad again... I forgot about the PCTA crybabies.

Yea, i've been noticing more and more old movies that at one time had
certain words or phrases either blanked out or replaced by more "family
oriented" ones (I prefer not to be insulted myself and just head about a
quarter
of a second of diead air, it's less condescending) are now just letting the
words
go by.

New shows are taking advantage, too. I don't write the names down of shows
that
use these words, as i have better things to do, but for quite while you can
hear
the phrase "kick ass", "pissed off", etc.

Is this really the case? I thought an upgrade is considered a modification. It's my understanding that an upgrade does not extend the license term, but a vanity call does (to avoid having to prorate the vanity fee).

>The term "expired" appears to be used only when a person has neither renewed

>10/18/2001.

In those three license classes, anyway. But this info raises a question: If your method only counts licenses which have reached the end of the grace period without a renewal, then the expirations listed above are those for licenses issued or renewed during the period 10/18/1998 to 10/18/1999. But that time period is before the Tech/Tech Plus split!
>
>On the other hand it does not appear possible to determine the actual number

I think FCC makes that info available another way, because the AH0A site

carries a "new license" category. But it's based on current data, not historic stuff.

Perhaps the best indicator is to watch how the total number of each license class, and the combined Tech/Techplus total, rise and fall. For instance, notice how slowly (percentagewise) the number of Advanceds is dropping, compared to how fast the number of Novices is dropping. The number of Tech Pluses is dropping fast too, but that's aided by the fact that FCC is renewing all Tech Pluses as Techs.

The NCVEC paper is not a group controlled by NCI, they are a completely
different entity.

But they ARE a group calling for some things that I find a little
disturbing.

And this IS something I got my chops busted about earlier with what
seemed to me to be a simple statement of fact. I'll state it again
paraphrased:

The removal of the Morse code test is the removal of knowledge required
to get a ARS license. Thos who believe that less knowledge should be
necessary to get a license can only be heartened by this event. There
will be a move towards further reductions in the knowledge needed for a
license.

lessee here:

(from NCVEC)
> One of the primary goals of the new license we are going to propose
>is a true entry-level ticket. Limited power, limited frequencies,
>but still useful, with enough of the essence of Amateur Radio to

>blood, people that can actually see their radios without having to
>put on glasses ï¿½ what a concept! 20 questions, simple enough to get
>someone started in a responsible way, pointed in the right direction,
>all that stuff.

Well what do we have here? A proposal for a simpler exam? Certainly
looks like it.

Especially charming is the idea that people with a 6th grade education
are going to supply us with fresh ideas. Its even more charming that
this new, fresh blood will be able to see their radios without glasses.
I've worn glasses since I was in second grade.

I guess the NCVEC doesn't really want me to be a ham.

Next:

> Whatever we come up with, it will have to fit within the FCC budget.
>This probably means that in all likelihood what will happen, assuming
>that the idea of a beginnerï¿½s class license is even accepted at all,
>is that they (the FCC) will juggle the existing 3 classes to
>accommodate the new structure. Technician will change from what it
>is now to the basic license. It may be named ï¿½Communicatorï¿½ or
>simply left as Technician. Letï¿½s assume it gets the name
>ï¿½Communicatorï¿½. All existing Techs will be upgraded to General.
>Assuming that the Morse requirement is removed first, our opinion
>is that most of the Techs will take (and hopefully pass) the element
>3 exam as soon as they can, thus becoming General class licensees.

Assuming indeed! They figure that people are going to study and pay for
a test in order to get priveleges they will get anyhow? If a Technician
flunks the test, all he or she has to do is wait a while, than he/she
will get the priveleges anyhow.

That sounds a LOT like simplification to me.

>Remember, that before the changes that created the present no-code
>tech, the General and Tech exams were identical. Only the code
>separated them, and even there it was only the difference between
>5 and 13 WPM.

But its not that way now.

And finally, before I forget about how I was charmed about the glasses
reference, I have to congratulate the authors on their humorous
treatment of Pro coders:

(more from the NVCVEC)
> So, there are no ï¿½Morse code hatersï¿½ on the committee.
>There is no conspiracy, no secret agenda, no kickback from the
>manufacturers, no ï¿½black planï¿½ from the ARRL, no anything. Just some
>guys that want nothing more than to see our great hobby prosper for
>the next hundred years, or longer.

and (I had to put this in again):

> You know, fresh ideas, new blood, people that can actually see
>their radios without having to put on glasses ï¿½ what a concept!

and:

> A few final words:

> There are no black helicopters.

I guess those who believe in the Morse code test believe there are?

>Do you suppose the committee members just want to see our wonderful
>hobby prosper? Wouldnï¿½t that be an odd reason for doing what they are doing?

Apparently those of us who believe in a Morse code test *don't* want to
see our wonderful hobby prosper!

And to make sure that they insult other hams who don't do things like
they think hams should do things:

> Oh, pardon me ï¿½ you always build everything from scratch? Great!
>Who, exactly, are you going to talk to? Most of the rest of us opt
>for the practical approach, and purchase a rig from one of the several
>companies that cater to hams. If there are no manufacturers, then
>there are no new rigs. Hard to carry on a QSO if no one is there.

What this has to do with the matter at hand is beyond me, except that I
think that they dont like homebrewers very much.

I'm very impressed that Morse code testing, by extrapolation, is going
to destroy the manufacturers. Talk about your conspiracies!!

And the answer to the question of who I'm going to talk to if there are
no manufacturers..... Well you know , don't ya Jim?

My final analysis of this piece is that the authors take a very
condescending and superior tone towards those they disagree with, take a
few gratuitous potshots at some other "outcasts" thay don't like, and
finally, support a radical simplification of the qualifications needed
to get on the air at HF frequencies.

and... and....

(last quote from the article):

> Morse will probably retain most of itï¿½s exclusive band segments,
>at least for now. We are not addressing this issue at this time.
>This may change in the future. Several countries no longer have
>exclusive segments, but depend instead on voluntary band plans.
>In fact, our 160-meter band works this way today, with surprisingly
>few problems.

LIB! there is is! the door is creaking open! here comes the foot.

Back to you Jim

> If the 'Novice' subbands are to be 'refarmed', I say they should be reused

I'm not talking about Carl either. I know that neither he nor Bill Sohl
are in favor of reductions in the qualifications to get a license (save
removal of the Morse code test)

That's really nice. It also *may* mean that they will someday be
considered the Luddites along with us troglodyte Pro code testers as the
requirements to get a license are relaxed more and more. The wheels are
already in motion.

I'm talking about when they actually change call signs, the old call sign is
marked as terminated. The person's license is modified with the new call
sign but that is listed as a new grant date. I believe an upgrade does
extend the license but a change of address does not.

> >

I was indeed focusing on the various entry level licenses as the debate has been over how many people stuck with it. These figures would be for licenses issued between 10/18/1990 and 10/18/1991. Their grace period expired 10/18/2003 and that is when they show up in the database as expired. That is to say the expiration date listed in the database is 10 years from the grant date although it won't show as expired in the database until the two year grace period has elapsed. For example, if I enter an expired date range covering the past year, it shows NO expired licenses. That's because they are still in the grace period and will not be listed as such until that grace period is up. I hope I've explained it clearly. If not let me know and I will try again.

>

That's why we should consider the Tech/Tech+ as a single group for the purposes whether a class is growing or shrinking.

I would suspect that the number of Advanced licenses drop more slowly than the Novice for several reasons. The percentage of Advanced licensees who are active is likely to be higher than the percentage of Novices. The Advanced licensee is probably more apt to renew, as he/she has a lot more effort invested. And the Advanced licensee often has little reason to upgrade as they have almost as much spectrum as the Extras. All the upgrade would get them would be a minimal increase in band space and the privilege of being eligible to administer Extra class upgrade exams. If they are not interested in spectrum space or giving Extra exams, that only leaves the "prestige" of being able to say they are an Extra. For many that's an insufficient reason to upgrade. It would not surprise me if the drop in Advanced licensees is due in a significant part to some of them becoming silent keys. However, there really isn't any way to determine that.

Just for kicks, I went back and looked up the number of expirations for the
other classes for the same time period (10/18/2000 through 10/18/2001).

General - 1654 expirations
Advanced - 902 expirations
Extra - 493 expirations.

Total = 3049 expirations

Based on other postings in this thread, the number of licensees holding Novice/Tech/Tech+ licensees in May of 2000 was 383,583. Those holding General/Advanced/Extra class licenses numbered 291,209. While I should go back and make my time period start with May 2000 to be really comparable, I'm just going to use the figures that I have for the next calculation as it shouldn't make a whole lot of difference. The percentage of Novice/Tech/Tech+ licenses that expired was approximately 3.4% in that one year time period. The percentage of General/Advanced/Extra licenses that expired was approximately 1.0% in that same time frame.

Jim,

Your statement is very misleading. Here is a direct quote from the document: "...it must be made clear that this document does not in any way reflect official NCVEC policy, and has not been approved by their leadership".

In point of fact, it doesn't really matter because the NCVEC is only a handful of people without any mandate as regards the future of our service. Some of them (W5YI comes to mind) tend to adopt "official titles" and use them as a bully pulpit from which to attempt to advance their personal agendas, but their influence with the regulators is no more or no less than anyone else.

>Dee D. Flint, N8UZE

Dee:

It was WWII, or, more accurately, pre-WWII but post WWI. Hitler used the term "lebensraum" as his justification for the conquest of Russia in his book, Mein Kampf. He lusted after Russia's vast expanses of land area in order to provide "lebensraum," or "living room" (space) for what he thought should be the rightful expansion of the German nation. His pursuit of "lebensraum" was one of his more severe acts of hubris during WWII, which ultimately resulted in his defeat by wasting his military resources on the second (Russian) front. Had he been willing to settle for the conquest and control of the whole of Western and Central Europe, he may have had the forces in place to resist the Allied invasion, and thus given Germany the time to develop it's own atomic weapons. This, of course, would have quite a dilemma for the Allies, since Hitler, madman he was, would have then most likely employed his nuclear arsenal -- most likely on Russia, England, and possibly the U.S. We, of course, would have had to nuke him first to prevent that from happening. Therefore, in a way, Hitler did the rest of the world a favor in his futile attempt to conquer Russia conventionally. A military genius he was not. If the Austrian Corporal had been a real General instead, a lot of us may not be here today.

Here we go again with this standard transmission crap ...this time it has degenerated to starters ....

Clint's logic ... no cars today have crank starters ... therefore CW is in that same category ...but wait ..why are there so many CW ham signals on the air ... ????

Clint am I a "crybaby" because I see a useful skill i.e. the 2nd most used amateur mode badmouthed in the most illogical , immature and counter productive manner.

I really think that in any endeavor there are those for whatever reason like "pissing in the punchbowl". I very rarely operate SSB, look at or transmit pix, never work
moon bounce or hunt for transmitters or any of the myriad of sub-groups that this service offers. But thank God that they are there ... a facet in the jewel that are available to me when and if I desire.

Clint I certainly hope that when the test is dropped that the myriad of those new ops will bring into play those new "electric starter" modes that "will always get through". I personally would not bet the kids milk money on that assumption.

You're still obfuscating, Dwight! And you know it!
No Code International means "no code test international" only because
they were forced into making the addition. The negative response
otherwise would have been overwhelming and they knew it, or soon found
it out. But it didn't change The Agenda.

That's contrary to what was posted some time ago here on this subject. In fact, I think it was Phil that said that before one can advertise himself as an engineer or sign off on engineering projects s/he must be licensed by the state as a Professional Engineer, after taking an examination, and that to work as an engineer without the PE license is to risk severe sanctions.

I have a soninlaw who is a PE (civil engineer) and he took some tests for the license. I understood that was a profeffional qualification put in place to protect the public from the inferionr work of unqualified persons posing as qualified and competent.
According to Phils last post, that was wrong. The publis gets no protection and the employers can't be held accountble either, unless there is a prosecutable criminal offense.

Yeah, the NoCode Agenda can get to be a bit bizzare, all right.
Between
all the "Luddite!" Mantra - while it's *WE*, the coded, who are actully
active with the modern digital nodes, then their version of Morse Myths,
Morsedists Religion, NCVEC's "vision of the future" and now Brian
accusing Jim, N2EY who holds a Master's Degree in Electrical
Engineering,-(Which Brian surely missed or even he would be smart enough
to have skipped what follows)- of obfuscating his ham radio homegrown
design and construction of equipment record....one truly wonders what's
the next on their "bizzare schedule".

You have me wondering now Dick. I'm wondering what the ratio of NCTA
homebrewers to PCTA homebrewers is?

Whereas a person that does not hombrew (by my more expansive definition as compared to Jim's) is not necessarily a technical nincompoop, those who do homebrew are arguably more "into" the Ham experience than those who do not.

I'll start this, and we'll see if people want to pick it up.

Jim is PCTA and has extensive homebrew experience.

I'm PCTA and have a good bit of experience, though nowhere near as extensive as Jim does. I've done some design, and lots of rebuilding, Mods and homemade keys and the like, and of course antennas.

Let's hear from both sides here.

Has anyone addressed the security issues with BPL? If BPL radiates from
the powerlines, what is to keep some savy hacker from receiving those
signals and with a little bit of software engineering they could read
your email, get your passwords and see everything you do on the

internet. I remember back in my days in the computer industry, long before the internet, one of the big defense contractors did this very thing. They discovered that enough signal radiated from the coaxial cable between the main frame and dumb terminals they could pick the signals up some distance outside the building and see everything going on on every terminal. Should be even easier with the amount of radiating that BPL will do.

Larry,

The above was NOT penned by me. I have no clue
why you think I did so. Forgeting even the morse aspect of
the the reference to the bible being a fairy tale doesn't
sync with my personal religious beliefes at all.

He wasn't controlling anything.

He was misguided in his assumption that you might be sincere
about your interest in radio, Sir Putzalot...even Amateur Radio. His
mistake, but hardly "controlling" anything...

> A bit later I wrote that amateur licenses did not have that much
> personal appeal for me. Neither does the "social aspect" or ego
> need stroking by group belonging. You should have surmised that I
> have a fairly extensive exposure to communications arts and technology
> by now, little of it based solely on news and "theory articles" in amateur
> radio publications.

In other words, you are pontificating about what OUGHT to be in a
radio service in which you have zero-point-zero experience, and for
which you have zero-point-zero understanding...

In other words, you're here for fighting's sake...Not serious or
sincere "debate" on ANY aspect of AMATEUR Radio.

> > Your opposition to code is no barrier whatsoever to getting a Technician
> >license, Len.
>
> While that is true, you are starting to misdirect and getting a bit hostile
> with an obviously unfriendly "challenge."

No...he doesn't understand that you are here not for the
interests of Amateur Radio, but for the sake of starting arguments.

Period.

> Feel free to tell everyone WHY one MUST have "at least" an amateur
> radio no-code-test class license in order to discuss the retention or
> elimination of a code test for any radio operator license.

Ahhhhh...Dwight's talking about getting active in Amateur Radio,
gleaning what one can from it and maybe making a contribution to it...

Lennie, on the other hand, has once again re-directed the
conversation into why he should be allowed to insult, antagonize and
defame others.

> Recall that this is a public forum, unmoderated, accessible to anyone.

Not according to YOU, Sir Anderscum. You have, on occassions too
numerous to count, "suggested", even outrigh demanded that others
"leave now".

> There is no dispensation for licensed amateurs to exclude
> professionals from discussion of radio matters.

When one arrives we'll allow him to say his piece, just like you
do, Lennie.

> This newsgroup is NOT a private forum...although it has become a
> chat room gathering place for regulars...most of whom insist that all
> must think, believe, and absolutely honor their superior thoughts,
> opinions, viewpoints, and beliefs.

One again you have uttered an outright lie, Leonard.

Sure hope your Padawan Learner is taking notes.

> To reiterate, this newsgroup is a PUBLIC forum. Anyone posting anything
> in public is open for any kind of reply. That's just the way it is.

But...but...but...LENNIE!

YOU have, in RECENT posts, read the proverbial "Riot Act" to
OTHER posters on what is "right" posting and "wrong" posting!

So...WHICH way is it, Lennie? Is it OK for anyone to post what
they want, or is it ONLY OK if it meet's YOUR criteria???

> My comments are more general rather than to specific individuals.

No, they are not.

> Many others are vehemently opposed to "different" comments (different
> from their own cherished beliefs). Their vehemence takes many forms
> as you've seen. Some of the forms are "gentle vehemence" such as
> the artificial "necessity" to be licensed in a radio service in order to
> discuss, debate, or argue federal regulations on specific radio services.
>
> Why must licensing (of any class) come first?

Uhhhhhhhhhhh....PRACTICAL EXPERIENCE from which to make an
INFORMED opionion, Lennie...?!?! Or was that engineering trait lost

upon you in 14 years of night school?

> I bring up certain points, facts, history as part of the debate-discussion-
> argument on subjects. If those proven and provable items are against

Was there ANYTHING in this about Amateur Radio Policy, other than Lennie wants his non-Amateur technician career to qualify him as King-Of-The-USENET-Hill...?!?!

I think not.

Another LennieRant, brought to you by Southern California's non-indigenous pathological liar, Leonard H. Anderson.

Thanks, Lennie.

> Just look at the cover.

Jim, I seriously doubt that Lennie was ever interested in the
cover...

Ignored and laughed at by the "real" electronics industry, Lennie
found a convienient little nest where he could roost, claiming to be
an "associate editor", using his "professional" status to bully his
way around the other contributors.

Occassionally getting a by-line wherein he could lay some
"honest" claim to being "published" in an industry where BEING
published is THE achievement, he could rest assured his name would lay
in some dingy basement as an "archived" volume for eternity...

I dare say Lennie probably got several comp'ed copies of
HR...(excuse me...."hr"...!)and put them at every coffee pot around
his "day" job office. I am sure the office secretary appreciated the
use of them as "coasters".

>examination, and that to work as an engineer without the PE license is
>to risk severe sanctions.

That depends on the state law. In Califoria, there are two levels.
"Title Act" and "Practice Act". There are five specialties
(Electrical. Civil, Mechanical, Petroleum, and Structural) in which
one cannot use the title or do the practice (be in responsible
charge of the work) to the public without being a PE. All the
other specialties are "Practice Act" specialties. Different
employers regard this differently. My wife's employer - the largest
environmental engineering consultant in the world - requires all
engineers to hold PE registration in their specialty from at least
one state to advance beyond the "Junior Engineer" level, and that
all work submitted to a client - public sector or private sector -
be signed and stamped by a PE. Most of their contracts require this
as well.

When it comes to the civil and structural engineers, it is almost
universal that state law requires that the engineer be a registered
PE and also provides a "handle" to "reach" said engineer if the
work is done in a negligent manner. The usual grounds for sanctions
against land surveyers and civil engineers in California is
negligent determination of or failure to file property boundaries.

In general, state statutes also provide a "handle" for the state
registration board to discipline registrants who perform work in a
negligent manner, but a finding of negligence requires a nexus
between the engineer personally and the affected/damaged party - the
complainant.

> I have a soninlaw who is a PE (civil engineer) and he took some tests
>for the license. I understood that was a profeffional qualification put
>in place to protect the public from the inferionr work of unqualified
>persons posing as qualified and competent.

>According to Phils last post, that was wrong. The publis gets no
>protection and the employers can't be held accountble either, unless
>there is a prosecutable criminal offense.

You misinterpreted what I said. The employer is always liable for the misconduct of employees in the course of employment. The complaint, however, has to be by an affected party (client) or by the DA if there is a criminal violation involved.

As usual, few are informed enough to worry about it. Look what Microsoft
did to Windows and yet numerous versions are used widely by millions
who just download the latest "patch" to "fix" the holes deliberately
left open to hacker/crackers by the programmers, and innocently wait for
the next attack.

Get the scoop on Windows at <www.grc.com>

Oh, my homebrew experience doesn't come close to Jim's either. But...

Back in the 70's I built up a 2meter repeater from components and
built the controller/IDer from a magazine construction article. Etched
the circuit board, populated it, programmed the IDer, intalled the
repeater along with a homebrew colinear antenna one of the other guys
built for it. He and I climbed and mounted it at the 200 foot level
on the local cable TV tower that had been deactivated for that use.
Not a safety belt to be seen in those days, either! Also learned a lot
about duplexers and how to set it up and sweep tune it. Also learned a
repeater can work quite well at lower power with separate antennas
if mounted with vertical separation on the same tower. Takes some
tweaking and messing with, but it can be effectively done with no
duplexer. Downside is usually that the xmit range is limited because
you need to mount the tx antenna lower to get full benefit of max range
on mobile/portables by mounting the rx antenna as high as possible. Got
to have a clean xmtr, though.
(I did all this at home before taking it to the mountain.)
Best to use a duplexer on a single high antenna.

Then there was a dozen or so SSB/CW linear amps over the years,
of various sizes from small to pretty large. I built up a 10KV
power supply once with a variac and calibrated voltmeter just because I
found the parts to do it with at hamfest fleamkts. Ran that into a
4-1000A, just loafing along adjusted around 4KV. I once cranked it up
to 7500 volts, daring anything to pop. Didn't. Breathe into the mike and
the meter really cranked! Lost my nerve, cranked it back down!

You GOT TO watch that HV *all the time* when working with that stuff, no second chances. But I also worked on various commercial, BCST and two-way base station gear, developed a routine and stayed with it. First thing I built with I started the HV work was a shorting stick! And I made it to retirement.

I once built a 5-band pair of 811A's into an old Johnson Viking Adventurer cabinet(quite small for the job) *with the HV power supply inside*, just to see if it would work. It did, but I could never get it tamed down on 20 meters & above, it wanted to be contrary and act like an oscillator! Linear amps are comparitively pretty simple.

I still have a big parts supply, more than ever, but little time and lagging interest in using them these days, due to various factors, not the least of which is this media....along with less nimble fingers and bifocals that don't. <G> Still some plans on the back burner, though, against the time I might finally tire of the rest of this.. I have parts to build a half dozen amps and much other stuff, but like so many of us I now use a commercial amp I like very much that is on the very rare occasions I use it. Mostly I just run 100 watts out since that's enough to do most of what I do. There's a shed full of projects sitting there waiting on me, and here I sit at the keyboard!

LOTS of Heath and other kits found form in my shop over the years,too. I was overseas in the Army when the Heathkit Monobander SSB transcievers first came out. I ordered the 20 meter version (HW-32 IIRC)with power supply and went on the air as DX (DL4RQ) on SSB. That rig was one of the few commercially offered transceivers (or kits) that did NOT have CW xmit capability built in.

I recall when at age of 13 or so a buddy and I built a couple of regen receivers using a single 76 triode tube. Worked amazingly well, or so we thought at the time....been thinking of doing one again just to compare with those. <g>

>> The question is, does this now mean we can say the F word on ham radio?

I wouldn't.

One argument FCC can use to defend the "different rules" thing is that
broadcasting works to a published schedule and the shows are rated in advance.
If you tune in Howard Stern on the radio or the Victoria's Secret Xmas special
on TV, you have a pretty good idea of what you'll hear/see. But on ham radio
there's no schedule, no program guide and no advance ratings.

Thank you for pointing that out, Hans. I apologize for the inaccuracy. I shall refer to the paper as "the KL7CC paper" from now on, and I urge others to do the same.

>In point of fact, it doesn't really matter because the NCVEC is only a
>handful of people without any mandate as regards the future of our
>service.

The paper claims to have three authors. Have you read it?

>Some of them (W5YI comes to mind) tend to adopt "official
>titles" and use them as a bully pulpit from which to attempt to
>advance their personal agendas, but their influence with the
>regulators is no more or no less than anyone else.
>
Somehow I will not be surprised if the NCVEC adopts something very similar to the ideas and attitudes in the KL7CC paper as its official position. They have already done so wrt code testing.

Thanks for the pointer

Good! Somebody had to bite the bullet and do it, let 'er rip. I'm
betting that Manassas will become the focal point of the whole issue.
It's likely gonna establish whether or not there's any money in it for
the service providers, whether or not the interference BPL generates
will terminally interfere with critical HF comms and how many of the
plugged-in $29.95/month citizen users of BPL in Manassas identities
get hacked, yadda, yadda, all of it.

For better or worse let the battle begin win lose or draw.

I vaguely remember Manassas being the last focal point of a much
earlier national debate, something about Lee handing Grant his sword
in Manassas . . is there some irony here?

There is no irony. Lee surrendered to Grant at the Appomattox
courthouse, which is not in Massassas. There is a good summary of the
Civil War battles at http://www2.cr.nps.gov/abpp/battles/bycampgn.htm.

Jim,

I think I have the answers to your bonus quiz:

Hanging Fire (or Hang Fire) - an old military term used when a black powder artillery piece did not immediately fire when the priming charge was lit (could be a few seconds delay before the main charge was ignited). Still used in this context whenever modern ammunition misfires.

Doubling The Hill - this one is probably an old railroad term for the practice of seperating train cars and taking them up a steep hill in two runs, back when steam locomotives were common. Insufficient power to pull the entire train up the hill in one run would have necessitated this practice.

Whadid I doo? Heck just last weekend in a contest on 40 and 80 meters,
I went to some open frequencies and asked "is the frequency in use? And
several times a ham wouls reply and say "yes it is". Then nothing would
happen. Silence.

If those hams didn't own those frquencies they wouldn't lord over them
would they? No wonder they don't like us contesters. Those poor guys had
to sit by their radios all day to keep teletresspassers like me off
their frequencies!

Nahh, all this was on SSB. Besides, I wasn't rude to the folks who
chased me off their frequencies. I just left quietly. That was the
essence of my question to the guy. Maybe he told someone in the contest
that it was his frequency and the other ham didn't listen to him.

That whole "surrender" business is just Yankee propaganda-
completely made-up. Grant had been drinking again,
so General Lee got him to agree to a "tie."
It was covered up to protect Grant's presidential run
so his cronies could get power.
Yeeee-HAAA!

Sorry, I forgot that these posts ended up in both North and South.

On a serious off-topic note, does anyone know what is being done to protec the CSA graveyards. Thanks in advance.

Well, I don't know anything about that, Dick. I visited their web site after reading something Jim said recently and saw absolutely nothing about a wider agenda to eliminate code itself. Since you seem aware of something more than their stated goals, perhaps you should present evidence of it here for all to see. Otherwise, it just appears you're attacking this group with unsubstantiated innuendo (and I'm tired of hearing unsubstantiated innuendo used as a political weapon in this country - it's sleazy, Dick).

This isn't a court of law, Dwight, and the level of evidence required
to make up ones mind depends on the indivual and his attention and
perception levels. So your effort to demand court-grade evidence falls
flat on its face.
Evidence is plentiful and much
of it has been displayed right here on rrap to see, even recently, with
of course some disclaimers to match. If you missed all that it would be
because you wanted to miss it, or just don't care enough to pay attention.

And yes, some if it is a bit sleazy as you note. But you misidentified
it a bit, as usual.

Actually, the individual in question smuggled banned items onto
multiple aircraft, including notes describing the contents and
providing plenty of contact information for himself. He then emailed
the TSA at the end of his trip.

The items were not discovered until five weeks after his trip. Then
the TSA found the emails and passed them to the FBI which came to get
him.

I think he knew what he was doing. I don't agree with what he did,
but he made a statement and he appears to be willing to do the time.

Jack.

>in his futile attempt to conquer Russia conventionally. A military
>genius he was not. If the Austrian Corporal had been a real General
>instead, a lot of us may not be here today.

Nice theory but some would dispute it thusly:

The big mistake was not the invasion of the Soviet Union, but rather the twin classic blunders of dividing one's forces and not being logistically prepared. Had the invaders gone straight for their enemy's capital (Moscow), and been properly prepared for the winter, the result might well have been very different.

The German atomic program would not have come up with a workable atomic weapon for many years (but the Allies did not know that). Look at what it took for the Manhattan project to make three weapons!. And Germany did not have a delivery system.

Germany also messed up bigtime by not giving U-boat production and development top priority and support. Large amounts of their limited naval resources were wasted on superbattleships like Bismarck and Tirpitz - had they built improved U-boats with those resources, again the result might well have been very different.

Then there's the Enigma story...

A good thing they weren't smarter.

Give the man a cee-gar!

Sometimes the problem was lack of motive power, but there was also the factor
of coupler strength and rail adhesion.

Modern RRs are well-documented enough know that horsepower and train
characteristics are figured out ahead of time by computers.

Innovative Web access to shock Manassas
SARI KREIGER
skreiger@potomacnews.com
Saturday, October 18, 2003

Manassas residents will soon be the first in the United States
to buy Internet access over city power lines.
The City Council voted unanimously on Thursday to
grant a franchise to Prospect Street Broadband, LLC.,
bringing a year-long preparation process to fruition.

Residents can purchase the service within 120 days of
the contract signing, which is expected to occur
next week, according to Energy Services Manager Brett Massey.
In May 2002, a small pilot group of city residents and
businesses began using the service. A modem is plugged into
the electrical outlet on one end, and the computer on the
other, to gain high-speed access to the Internet.
"They were very impressed by the speed, reliability
and flexibility," said Utilities Director Allen Todd.

Freda Wallace, an administrative assistant with Robert
Loveless Architecture in Old Town Manassas said the
company has been receiving the service since February.
"We've had good service with it," Wallace said. "The
only time it has been down is because of our
equipment, or because they're testing something on
the lines because it is a pilot program."

The Connecticut-based company that received the
franchise will be responsible for the equipment,
connection, monthly billing, advertising and
24-hour-a-day, seven-day-a-week customer
support. The city will expand the current fiber

network, which is almost complete, update optical
electronics and install and maintain equipment
external to the residents' homes.

"The grantee will be providing most of the capital
of this project and assume most of the risk," said
John Hewa, assistant electric director for the
City of Manassas. "There's very little financial
risk to the city."

John F. Berry, chairman and CEO of Prospect Street
Broadband, said the service is very easy to use and
no special training is necessary. Residents can purchase
the service and obtain access from any city outlet.
"You sign up once and you can sign on at home,
a friend's house, the ice skating rink, where ever," Berry said.

If residents opt for this Internet service provider, they will
pay approximately half of normal high-speed access, as
the tentative service price is $29.95 a month for
residents, and $69.95 for commercial access.
"It will be competitively priced and a quality service,"
said Vice Mayor Harry J. Parrish II.
Wallace said the service was comparable in speed to
any DSL program available. "It's very fast," she said.

And as a fringe benefit, the city can also monitor power
outages through this technology. Todd said the city has
been trying for years to achieve that capability.
Two bids were received on Sept. 8, and Todd said the
city spent a considerable amount of time examining
both proposals to ensure the best outcome for residents.
"We've never had a franchise quite like this before," Todd
said. "We wanted to make sure we had measures that
would protect the services we promise the citizens."

The contract that the council voted to approve calls for a
10-year term, with a five-year extension. A minimum
payment of $24,000 after the first year, and $124,000
after the second and third year is guaranteed to the city.
Initial figures project that Manassas could receive up
to $4.5 million in revenue after the 10-year period.
Councilman Ulysses X. White questioned city staff
about future price hikes, as he was reminiscent of
a similar situation with cable television in the city.
But Todd said with competition available, residents
wouldn't be stuck with high bills and no options.
Rather, this new offer gives residents exactly that -- options.

Councilman Eugene R. Rainville said residents will benefit
from an extra use of the electrical system their tax dollars already fund.
"Now they can get Internet at a low price," Rainville said.

"I would encourage all of our citizens to at least look at it as an alternative."
And according to Parrish, residents may receive an added bonus if enough people patronize this service. "It looks like the council might have the opportunity to look at tax reduction," Parrish said.

Hate to tell you this, but your son Hans seems to have run away from home.

A bit over a week ago he got all uppity and had a hissy-fit over some alleged "poor research" on Reg Fessenden's 1906 voice broadcast.

Your son must have been so ashamed he can't comment on my reply...which referenced a McGraw-Hill publication special edition, verbatim, even to the page and column location.

Your son must still think it is possible to voice-modulate a SPARK transmitter. Pity that, considering he is a (self-stated) "degreed-before-USN-service Master Chief" now a Manager at an electronics company.

Voice modulating a spark transmitter would be like trying to voice modulate a doorbell buzzer. It creates something that may sound like voice but it sure isn't intelligible. You should encourage him to work on the techniique. It might even make an interesting project to highlight the tube fanzine called "Electric Radio!"

Mama Brakob, your son also loved to make the comment that "gentlemen can disagree without being disagreeable." He then went and started a whole new thread by being as disagreeable as possible. You've lost him somehow, Mom Brakob.

I do hope you find your son again and impress upon him good virtues. Keep the candle lit in the window and GOOD LUCK ON THIS ONE NOW!

Best regards,
Len Anderson
retired (from regular hours) electronic engineer person

Perhaps - but we're amateurs, remember? Not professionals.

>It hasn't been for several decades,
>at least. As far as I know, not a single college-based communications,
>radio, electronics, or engineering, course today offers instruction in code
>"skill."

None of them I ever heard of did, either. Nor did any of them require typing, speech or voice lessons for engineers. The radio part of EE is about building radios, not using them.

Radio is but a small part of electrical engineering, and it keeps getting smaller as other technologies come along. Heck, the hot subject in communications today is fiber optics - which works by on-off keying!

>Likewise, few, if any, employers are seeking that "skill."
>Therefore, it (code) simply isn't relevant to any of these careers.

It's now about 7 years old but is the most recent one that can be considered "scientific" by any stretch of the imagination.

>> That sort of behavior is unacceptable. Not "real ham"
>> behavior.
>
> Luckily, it is rare. The club in Washington was very open to all. This
>club isn't.

Then it's not worth belonging to anyway. Hostility towards another ham just because of license class - *any* license class - isn't the way 'real hams' behave.

>Sadly, the fact that a club elsewhere is different doesn't
>really help those who are here. I've considered starting an alternative

>long term.

dang - wish you were in this area, Dwight.

While some folks around here have strong feelings one way and the other about code testing, it's considered very bad form to exclude or denigrate anybody based simply on their code-test opinion. Of course, if someone starts excluding or denigrating, they will often find themselves excluded and denigrated - even by those who agree with their opinion.

Not that it helps things where *you* are.
>
>> How do we know that there are "far more outside that
>> organization..involved"?
>
> Well, since most Amateur Radio operators don't join any type of club
>(local, ARRl, or whatever), it's a fairly safe assumption.

We'll have to agree to disagree on that.

But it raises a good question: what are most hams actually doing? Look at the number of Generals, Advanceds and Extras (hams with lots of HF privileges) - the total is well over 300,000. If even 3% of them were on HF at any given time, the bands would be packed bandedge to bandedge. (there's only 3550 kHz from the bottom of 80 to the top of 10 - less space than 6 or 2 meters!)
>
>> Most of those opposed to code testing I have encountered

True - but FISTS costs $15/year to belong to. NCI is free. And until recently, FISTS did not take a position on code testing.

>Based on what I've seen, there is a general
>trend throughout this country not to participate in clubs or other such

Sad but true. A very big part of the reason, I think is lack of time. Not that we have any more or less time people had in previous times, but that we use it differently and have different expectations. In my case, for example, free time comes in little bits and pieces in between responsibilities.

Actually, the Salvation Army *is* fighting a religious *war* of sorts - against evil.

If someone is against the code *test*, then let them take the trouble to spell it out.

HOW CAN THAT BE?!?!?!? You must obviously be mistaken. Those guys
passed morse code tests, and yet they're disruptive, cause trouble and
violate
the ham radio laws & rules laid forth by the FCC?

I was *sure* the PCTA crowd said that the morse code test was an adequate
filter to keep out the "CBplussers".

>W4WW. That's four, last time I checked.

Of course!

But if you read that paragraph carefully, (the one where he names the "Gang of
Four", which is his phrase, not mine), you'll see that the Four named above are
the NCVEC Rules Committee, not necessarily the authors of the paper.

I say it's three, based on the signature.

To-may-to, to-mah-to, what matters is the content. Some very good ideas and
some very bad ideas.

> Avenging Angel, I see.

No, Brain, it was YOUR "Avenging Angel" personna that was at
work. When YOU do something like that it's "levity"...trying to get
someone to "lighten up". When I say something similar you whip out
this new "Avenging Angel" spin in order to try and disguise your own
conduct.

I say it's yet one more example of following in the footsteps of
Lennie the Liar..."Don't So As I Do...Do As I Say"...

Bascially, I just think you're two-faced.

If you say so...The only time I "cooked" in the line of duty in
the USMC was heating C-Rats while in boot and on the trail.

And your having been a weather guesser in the USAF in no way
changes the facts vis-a-vis your earlier comments...The "facts" you
cited were all things being done in the Armed Forces for decades
before your signed on the line.

Big deal.

Mike,

Count me in.

Numerous linear amplifiers:

4 x 6146, pair of 811A's, pair 813's, 4-1000

antennas:

duoband 12/17m yagi (parasleeve excitation), 2 elements each band,
hairpin match (currently in use)

2 element 40m inverted vee phased array (135 degree phasing, 1/8 wave
spaced).

power supplies:

a number of low and high voltage (and multivoltage) supplies from 12
volts to 5,000 volts.

antenna tuners:

100w switched "T" matches, 2 KW+ Ultimate transmatch, 2 KW+ "L" Network,
200w link coupled tuner for balanced line, 2 KW+ L/C phasing network.

Not "moot".

We're discussing where YOU have been.

As for where >>I<< have been, >>I<< can supply at least SOME of
my logs, Brain. It was only Okinawa in that case, but it was legal
and it was AUTHORIZED. (RE: AMRS authoirzation KA6CM, 1981, 15thAF,
PACAF)

Geeze you're an idiot, Burke.

BOTH (had) UCMJ authority over you, Burke, and NEITHER were
"merely" an officer.

> > I am not the one who doesn't know the difference between
> > "authority" and "acceptance".
>

> I accept no authority from you.

You don't need to, Brain. I've not suggested that I exert any
"authority" over you. I've simply pointed out that YOU do not KNOW
the difference between "authority" and "acceptence".

To date, you've not done nor said anything to demonstrate that I
am in error. You've simply tried to make new silly names and use
equally silly unfounded assertions to try and cover it up.

> > > I see it differently.

Mentorship requires the consent of the elder. Since I do not
grant it, you may claim anything you like.

You may not like my style, my politics or my tactics, but I am
not a liar. You ahve demonstrated that you probably ARE lying about a
great many things, and you have already laid the "responsibilty" at
Lennie's feet.

Try as you might, you have already sank any future credibility
that you might have sought. Your error. Sorry.

> Anything else is an attempt to
> > back out of the corner YOU painted yourself into, Sir Clueless.

Wrong again, BOB (Bill Old Boy). Read it often enough
and you begin to have little choice but to believe it.
That you choose to ignore all all that is immaterial.

> Good thing you morsemen have a cozy lil chat room to talk all
> about AMATEUR RADIO SUBJECTS, isn't it?

Most of what YOU want to talk about isn't related to Amateur
Radio either, Your Putziness, so why hassle Jim?

> So, Capt. Jimmie, what outfit were you assigned to?

Why do you insist on trying to besmirch others for thier military
(or NON-military) service, Lennie?

Is it illegal for an American to NOT serve in the Armed Forces?

Can you PROVE that Jim Miccolis or ANY other person in this forum
shirked an OBLIGATION under the Selective Service Act...?!?!

We're talking about REAL facts, Lennie...The truth....Something
you can PROVE...?!?!

Sems to me there's been no draft in this country since the mid
70's, and that military service is non-compulsory. YOU keep trying to
insinuate that Jim or Brain Kelly's careers somehow hinge on what they
did or didn't do in the Armed Forces, but you have yet to explain why.

YOU have zero-point-zero experience in Amateur Radio, yet you
seem to be perfectly OK with commenting at length on Amateur Radio
matters.

You have zero-point-zero days experience as an aviator, but
you've tried to pull the wool over our eyes on matters pertaining to
aviation, too. Read Bill Kershner's Student Manual a few times I
wager, but you've never once been pilot-in-command of an aircraft, yet
you went off on a tirade about NAVAID systems and aerial
navigation...THAT was a hoot...!

You also have zero-point-zero experience in matters such as
emergency communications, disaster relief, etc, yet you always feel
compelled to comment on thos matters too. (OK, I'll give you
zero-point-five experience for the ONE time you owned up to helping at
a disaster...filling sand bags...)

Are we to assume that YOU are of the opinion that it's OK for YOU
to express opinions on matters for which you have no practical
experience, but it's NOT OK for others to do the same...?!?!

We'll wait right here for your answer.

Steve, K4YZ

news:<20031020193034.06226.00001046@mb-m19.aol.com>...

Somewhere in here there is something about Amateur Radio
POLICY...I am SURE of it, because Lenoard H. Anderson has told us over
and over that this forum is ONLY about that topic, and being the
PROFESSIONAL he claims to be, we KNOW he'd never lie to us.

> Hate to tell you this, but your son Hans seems to have run away from
> home.

I found his address in 30 seconds. I'll bet he's home right now
if I ring him up, Lennie. I guess this was yet ANOTHER bit or
research that you were unable to manage.

> A bit over a week ago he got all uppity and had a hissy-fit over some
> alleged "poor research" on Reg Fessenden's 1906 voice broadcast.

Uhhhhh....I read the same post and it was far from being
"uppity", nor did I see anything regarding a "hissy-fit".

> Your son must have been so ashamed he can't comment on my
> reply...which referenced a McGraw-Hill publication special edition,
> verbatim, even to the page and column location.

Now I DO remember seeing a LOT of LennieRants that were repeats
of other people's work...Len Anderson makes liberal use of
cut-and-paste, but snips the parts where he gives credit where credit
is due.

> Your son must still think it is possible to voice-modulate a SPARK
> transmitter. Pity that, considering he is a (self-stated) "degreed-
> before-USN-service Master Chief" now a Manager at an electronics

It happened, Lennie.

> Voice modulating a spark transmitter would be like trying to voice
> modulate a doorbell buzzer. It creates something that may sound
> like voice but it sure isn't intelligible. You should encourage him to
> work on the techniique. It might even make an interesting project to
> highlight the tube fanzine called "Electric Radio!"

No one said it was stereophonic quality...

> Mama Brakob, your son also loved to make the comment that
> "gentlemen can disagree without being disagreeable." He then
> went and started a whole new thread by being as disagreeable

> as possible. You've lost him somehow, Mom Brakob.

I think the one lost is the progentiator of this thread.

He says he is only interested in "debating" the "code test issue", yet here he is generating a new thread that is the very essence of a personal attack...And one that disrespects Hans' extended family, none of which have anything to do with this forum.

What's up with that?

He makes numerous allegations of dishonesty and wrong-doing of other persons and of well-respected organizations for which he offers no evidence other than his uninformed opinion.

He has frequently made assertions about his "fondness" and his "respect" for the Amateur Radio Service as an entity, but has nothing but vile, bile and hateful rhetoric for anyone licensed IN it...

He has also attempted to embellish his own character by associating himself with United States Army KIA's despite having NOT been in the Armed Forces when those Soldiers made thier sacrifice.

> I do hope you find your son again and impress upon him good
> virtues. Keep the candle lit in the window and GOOD LUCK ON
> THIS ONE NOW!

Yes, Lennie...Good Luck With This One Now.

You remain pathetic, irresponsible and as foolish as ever. But look behind you...Brain Burke is peddling fast to catch up.

> Best regards,
> Len Anderson
> retired (from regular hours) electronic engineer person

Thank God for that...We can all see where the engineering talent resided while you WERE on "regular hours"...Tokyo...Bejing...Seoul...Singapore...

For those interested in facts rather than Len's usual infantile
nonsense and bluster, here are some insights into how Fessenden did
it:

Sound of a voice modulated spark transmitter:

http://www.eht.com/oldradio/history/outline/Fess-voc.htm

Noisy but intelligible. Not at all like a doorbell buzzer. Mr.
Thiessen was able to understand the message well enough to telegraph
back that it was, indeed, snowing where he was.

Sounds of various types of spark transmitters, including the above:

http://www.acmi.net.au/AIC/SPARK_SOUNDS.html

The 3 phase sync gap sounds almost like CW.

Historical writeup (with references) of Fessenden's developments and
accomplishments in early wireless:

http://ewh.ieee.org/reg/7/millennium/radio/radio_differences.html

Note that this link is to (ahem) an IEEE page. They seem convinced.

Short and incomplete list of Fessenden firsts in radio:

- First voice and music transmissions by radio
- First 2 way transatlantic radio contact of any type
- First transatlantic voice transmissions
- First 2 way transatlantic radio contact using voice
- First broadcast of voice and music (both live and recorded music)
- Inventor of heterodyne method of reception for undamped waves

(with over 500 patents, a complete list of Fessenden firsts takes a bit of compilation...)

Fessenden beat Marconi to practical 2 way transatlantic radio even though Marconi had first demonstrated 1 way transatlantic radio. Fessenden also had a working 2 way transatlantic *voice* radio link less than 5 years after Marconi's claimed reception of the letter "S".

But don't take my word for it. See the links.

Neat stuff! The only manufactured ham antenna I've ever used is a 2 meter mag mount.

Did I mention shack furniture and accessories (shelves, tables, etc.), home-designed and made from lumber? Not up to New Yankee Workshop standards, perhaps, but they do the job.

There's also the Tymeter mechanical digital clock I assembled from the parts of several discarded ones. Motor from one clock, case from another, 24 hour mechanism from a third, etc. Total cost about $2 - ten or fifteen years ago.

And when I find a space for a computer in the shack, it will be a home-assembled one.

>
> Perhaps - but we're amateurs, remember? Not professionals.

Yes, I do remember, Jim. However, why are you asking me this question? Dick is the one who brought up the engineer in the first paragraph above. I was simply responding to his comments. And that response addressed the engineer solely, not amateur radio.

> >Likewise, few, if any, employers are seeking that "skill."
> >Therefore, it (code) simply isn't relevant to any of these
> > careers.
>
> Neither are a whole lot of other things hams do!

Never said, suggested, or even hinted at, anything to the contrary. The topic raised by Dick was the engineer, not amateur radio.

> these days? In a word, NOTHING!

Then I have two questions, Dick - why did you raise the issue and who in this discussion offered it as an 'excuse" for discontinuing the code test? Again, you specifically said...

"I still find it beyond incredible that persons who would
learn all that goes into making an engineer would have
any problem whatever with learning the most basic radio
communications skill at the most minimal level."

You brought this up and now claim it "isn't relevant." And I certainly said nothing about this being an "excuse," or justification, or anything similar, for ending the code test. In fact, I didn't mention amateur radio or the code test at all in my response. Instead, my comments addressed the specific issue you raised - why the engineer would not be interested in learning code.

Len,

Whatever you may think about Hans, I do recall the typhoon that hit Saipan. I do recall being at the station (KG6AAY) that made good contact with Sparkplug1 on Saipan. That was Hans on Saipan and I was at KG6AAY (NavCommSta Guam). Whatever you may think of him, he served his country (we are both Vietnam vets - I had 11 months of combat pay) and did a lot of good after that typhoon.

I know - "but what have he or you done in the last 15 minutes?" - perhaps better asked "what have you done?"

Don't worry about candles, the lights are on and someone's home both here and at Han's end LOL

With all kind regards from Rochester, NY
Jim AA2QA (WB2OSP at the time in the late 60s - amateur extra then)

I didn't "demand" anything at all, Dick. Instead, I simply suggested that you should present evidence to support your claim here, so others (myself included) can see for themselves, to avoid the impression that you're just attacking this group with unsubstantiated innuendo. Of course, since we're obviously not in a courtroom, how you respond to that suggestion is entirely up to you.

> Evidence is plentiful and much of it has been displayed

I'll accept that as your "evidence," and remain totally unconvinced. I don't know anything about NCI beyond what I've quickly read on the first page of their website. What you've said certainly hasn't added anything to my knowledge of that organization.

It's human nature to shorten phrases to simplify a discussion, Jim. We all do it when it's bloody obvious what's being discussed. If you don't, then you're truly an extraordinary human being.

> If someone is against the code *test*, then let them take
> the trouble to spell it out.

Oh, I see. This only applies to those oppossed to the code test. Sorry, you don't make the rules - either in this discussion or over human nature. To continue to demand clarification of the obvious only makes it appear you can't see the obvious, which isn't exactly a good impression to leave with others, Jim.

>are both Vietnam vets - I had 11 months of combat pay) and did a lot of good
>after that typhoon.

Jim, this wasn't a comment about "military service time" or "typhoons"
on Saipan or anywhere else.

Hans Brakob came out of the blue with a personally insulting comment
about "bad research," something that I allegedly "always do," solely
about "the first voice transmission by radio." Hans claimed, but did
not reference or otherwise verify that it was done with a SPARK
TRANSMITTER.

I quoted an Electronics magazine special edition text paragraph that
stated this 1906 Christmas transmission was done with a 1 KW
ALTERNATOR, probably using a water cooled microphone in the
antenna line. I gave the Electronics magazine (then a biweekly
subscription magazine published by McGraw-Hill, the large book
company) page number and the location on that page. I was a
subscriber to Electronics magazine and also a contributor (Designer's
Casebook section, 1978)...as well as other electronics trade
publications. McGraw-Hill Book Company is in the top textbook
publishers of the world on a great number of technological fields.

"Poor research?" Hardly. Part of what I do for a living IS research
and I've done fairly well in making a living...IN radio-electronics.

So, along comes a very irritated a disrespectful person tossing out
direct personal insults as the FIRST MESSAGE in a new thread...
for whatever personal pique picking at him. Poor baby. He tried a
random shot in my direction and got heavy caliber automatic fire
right back. Tsk, tsk, tsk. Big "hero of Saipan" is supposed to be
given some special dispensation and approval of random personal
pot shots at anyone? I don't think so.

In case it's slipped your mind, I served in the United States Army
from March 1952 to April 1960. Remember the Korean War? It never
ended...started in June 1950 and slowed down to a state of truce in
July 1953. Note that March 1952 fits inside that time frame. The
Korean War HAS NOT ENDED. The state of truce still exists.

I was never assigned to any Korean unit, but spent three years with a Signal battalion whose task was providing primary HF radio communications for the Far East Command Headquarters. Three years beginning February 1953. A group of courage-spilled civilians who NEVER served in ANY military wanted to make personal insults of MY service. One jarhead (who claims "seven hostile actions" on his record...no proof presented) seems to make that her ONLY output in here...she never did anything like primary comm in her service. My proof of service and when is archived at NARA, the National Archives and Records place in St. Louis. The FBI, IRS, SocSec, DCAS, and a bunch of government alphabet soup agencies haven't had any trouble with that for years.

Station ADA where I worked never did anything dramatic. Over 700 of us simply Got The Messages Through 24 hours a day, 7 days a week. No fanfares, in any kind of weather. Over 200K of messages a month. My battalion got TWO Presidential Unit Citations while I was there. Callsign ADA is still used in the Pacific, 57 years later, for the U. S. Army Pacific Headquarters at Fort Shafter, Hawaii.

Some other NON-COMBATANTS seem eager for verbal bloodshed in here over PAST trivia...way back in the very beginning of radio, far before I served the USA, far before they existed, before the Church of St Hiram was dedicated, before the first US radio regulatory agency.

Tsk, tsk...such "radio experts" ought to devote some time learning the radio arts of THIS CENTURY, not the past one. I spent my working time and some of my non-working time keeping up with radio and electronics technology...not endless debates over minutae of history that matters not to electrons, fields, and waves.

Hans has to bandage his own wounds. Not my problem. If he wants to take first pot-shots, he better damn well get better artillery, body armor, and a good revetment next time. The alternate is a graves registration unit picking up his body parts for the big rubber bag.

NOBODY gets special dispensation for anything in here.

At ease...as you were...

Certainly the tales of your experiences of fifty years ago as observed from Japan, have never ended.

> A group of courage-spilled civilians
> who NEVER served in ANY military wanted to make personal insults
> of MY service.

You've made personal insults to the military service, government jobs (or any jobs for that matter) of any number of people posting here. We are all, as best I can tell, civilians here. At ease, old soldier. You're now off duty.

> My proof of service and when is archived at NARA, the National

Good point there Clint .... but you are assuming that these idiots, if indeed they are doing the QRMing have passed a "CW test". I just wonder since the FCC has gone to the test your own mode ...how much money has been slipped to the testers for a CW pass. I am not going to go through the trouble to play Jim Rockford or Bulldog Drummond on the above calls to see if they were "gen-u-yine" FCC tested. I really believe that this crap should have been stepped on in the years gone by. Police our "own" ....boy that is something that sure works. The FCC should be in this area as in the past This would entail a price for a ham ticket which knowing the "generosity" of most hams I know, would stand the snowball's chance in Hades of happening. Also on these same lines are the situations which guy's get busted for doing neat things like interfering with aircraft, police et al. You see in a lot of these cases that the FCC has reduced the fine ... huh ???.

I can say that I have been purposely QRMed on CW over the years in just a handful of times. Most CW QRM is non intentional due to propagation factors. I guess that the satisfaction for the QRMer is just not there to justify a response he can't copy. Like was said before there Clint ... ya can't fart on CW.

But was it on a published schedule?

Some may consider it a double standard, but the fact is that FCC can
and does have different standards for different services. At least
part of this is due to the ability of broadcasters to spend millions
fighting lawsuits. But the prime argument is the 'complaint rate': If
Mr. Stern says something that causes, say, 400 people to complain to
the FCC, Infinity Broadcasting can say to FCC: "40 million (or
whatever) people listen to Howard and only 400 complained? That's 1 in
100,000 listeners!" What amateur who does the same sort of thing on
the air can make that sort of claim and back it up with real numbers?

You just figuring that out, Steve? ;-)
>
> We'll wait right here for your answer.
>
Don't hold yer breath waiting.

btw, didja take a listen to the spark rigs - particularly the voice
modulated spark?

Here's how Fessenden did it, in a nutshell:

The buzz that characterizes ordinary spark signals is due to the
relatively low AC used. Fessenden figured that if he used AC above the
audio range, the spark rate would be above the audio rate, and
intelligible audio would result. He was right, of course.

And by using headphones with poor response above a few kHz, much of
the noise would be filtered out.

Of course when he got his paws on a suitable Alexanderson alternator,
the spark idea was abandoned. His alternator would go as high as 100
kHz and was rated at 1 kW.

Of course. But in this case dropping the word "test" changes the
meaning tremendously.

> We all
> do it when it's bloody obvious what's being discussed. If you don't, then
> you're truly an extraordinary human being.

I don't drop words that are needed for clarity.

> > If someone is against the code *test*, then let them take
> > the trouble to spell it out.
>
> Oh, I see. This only applies to those oppossed to the code test.

No, it applies to everyone.

> Sorry,
> you don't make the rules - either in this discussion or over human nature.

I'm simply expressing an opinion. I think people should take the time
to be clear in what they are saying, particularly in a discussion
where there are radically differing viewpoints, and where people drop
in and out of the discussion often.

> To continue to demand clarification of the obvious only makes it appear you
> can't see the obvious, which isn't exactly a good impression to leave with
> others, Jim.

I'm simply expressing the opinion that if someone is really only
against the test, they should so specify.

Oh, now, you're just reaching on that one. You could use that line of
thinking
to support ANYTHING. The fact is, one of the strongest and loudest responses
you hear from the PCTA group is that it is suppose to filter OUT people like
that;
given that this is just but SOME proof that it doesn't, thier argument
fails. Not
only that, it's on record that the majority of rules violaters ARE hams with
morse code endorsement... yet MORE evidence to prove that morse code
testing does not filter out the "yahoos".

>You sound sore about learning morse code, try to get over it.

Any anything else that is required to learn that has no real factual
reasoning or basis and is a total waste of time.

This is
> what it takes to be a HAM. Either do what it takes to get the job done or
> don't join our ranks!
>

...until the FCC says that it is no LONGER what it takes to be a ham.
THEN, a person can become one without the morse code testing.

and your point being? that just means there are MANY examples of why
CW testing is outdated.

>
> Clint's logic ... no cars today have crank starters ... therefore CW is in
> that same category ...but wait ..why are there so many CW ham signals on
the
> air ... ????

no problem with use of morse code. It's code TESTING that's outdated
and is going to be removed.

>
> Clint am I a "crybaby" because I see a useful skill i.e. the 2nd most used
> amateur mode badmouthed in the most illogical , immature and counter
> productive manner.

2nd most used? that's debatable.. in fact, i'd be willing to bet it's far
from
the most used. AND, i'll play my own devil's advocate; it's widely agreed,
with little dissention, that code use is on the decline... therefore, even
IF it's
as you assert (again, playing my own devil's advocate), this couldn't
possibly
be true indefinitely as it's use shrinks and deminishes.

> Force" book, Stebe, nor have I received via Len and back channel news.

Brain, Brain, Brain...The suggestion vis-a-vis a book or
back-channel input from Lennie was a question. Please re-read the
above.

A question cannot be a lie...It can only be a question.

> The "facts" you
> > cited were all things being done in the Armed Forces for decades
> > before your signed on the line.
> >
> > Big deal.
>
> I merely learned them first hand.

No doubt. I rather imagine that you stopped opening books after
the "Dick and Jane" series.

> So how does a USMC nurse know about solar observatories in the USAF?

I wouldn't know, Brain. There are no nurses (by MOS) in the
USMC. Anyone who may be in the USMC now who holds licensure as a
Nurse does so as a personal achievement. I knew of a couple, but none
who were assigned to billets as nurses. One was a pilot, the other in
admin.

Nursing personnel assigned >>TO<< a Marine Corps unit are not in
the Marines. (They are usually Navy) If you read a book once in a
while, you might know this....But then again I doubt that too...

I was not a Nurse while in the Marine Corps.

As for knowing about solar observatories in the USAF, I hate to
burst your bubble, but there's very little that's actually
"classified" about aerography, in the USAF or otherwise, Brain.

> Brian

Yeah...right....

No, Brain...To an "outside observer", I was asking a third party questions.

That third party was specifically named.

That the third party was dodging the questions was obvious.

That you somehow come to the conclusion that I was somehow talking to myself is absolutely assinine. THAT, to an "outside observer", WOULD be obvious.

You have yet again satisfied my curiosity as to just how stupid one human can get...

1560. Mentoring Conditions For Brian Burke, Padawan Learner (BBPL)

Newsgroup: rec.radio.amateur.policy
Date: 2003-10-22 00:40:17 UTC
From: k4yz@aol.com
Message-ID: <5c01b95b.0310211640.3f4dacf6@posting.google.com>
Source record: 81236

Brain,

You have recently insisted that I am now your "mentor". I have refused to take that responsibility since I simply believed you were just too stupid and too irresponsible to carry out your duties as a Padawan.

I realize now that I was too abrupt in dismissing you, and I apologize.

So here's the first step. These are some of my basic beliefs as they pertain to Amateur Radio in general and this newsgroup in particular, and they will be a part of your training. Before you may continue as my Padawan Learner, you must agree to these basic tenents wholly and without reservation.

If you do not post an acknowledgement to this thread and acceptence of them, without condition or exception, you will lose the right to call yourself my student, I and shall not be your mentor.

Remember...ANYTHING other than total and unconditional acceptence is evidence that you refuse my mentoring and shall therefore be barred from the perks and priviledges associated with being my Padawan.

(1) Amateur Radio is a dynamic and flourishing resource of self-trained radio operators and enthusiasts. There are almost as many opportunities for enjoyment of Amateur Radio as there are participants as each one brings his/her own contributions to it.

(2) I consider Morse Code proficiency to be an integral part of both Amateur Radio's history, and will continue to be an important part of it's future for some time to come. It allows disimilar and disparate souls to be able to communicate, if only at a very rudimentary level, and that human-to-human contact is vital to Amateur Radio. While Morse Code testing may become a thing fo the past in the very near future for the United States, I believe it should continue to be promoted, and my Padawan should share that belief and likewise demonstrate both proficiency in Morse Code, and should actively promote it's learning among all Amateurs. I define "proficiency" as being able to carry on a two-way CW QSO without the use of any decoding device, and at a sustained speed of 10WPM or greater.

(3) I do not tolerate liars, to include those who express admiration for people known to be liars. My Padawan shall renounce any past expression of admiration for any person so predisposed, and My Padawan will take a proactive role in ensuring that such liars are made known when thier acts or words are known or believed to be known

as false.

As a matter of exception, to express an opinion or to ask a question which shall be known to any reasonable person as contrary to popular opinion is not itself patently false. A lie is an OVERT attempt by a person to mislead, misrepresent, confuse, or otherwise represent the truth.

Example #1: "Amateur Radio is boring and useless". While I certainly do not agree, the person who uttered this was entitled to his opinion. It was, of course, the opinion of a person with very little understanding of Amateur Radio, and who sought to re-create it in his own image.

Example #2: "I am going to get the Extra-lite right out of the box". The person who uttered this did so knowing his words would be watched, and did so utter this assertion for the sole purpose of trying to climb out from the onslaught of messages against him which proved his other assertions false.

Example #3: "The ARRL is dishonest". This was patently false when originally uttered, and the person who did so has never brought forth any validation of the assertion. I would have loved to see the League make him pay for his verbal cowardice in court, but they have better things to do.

(4) While cerainly admirable, service in the Armed Forces of the United States is not prerequisite to being a good citizen, nor is it a prerequisite to discussing matters pertaining TO the Armed Forces of the United States. Indeed, the AFUS are the tool of and answer to the people...not the other way around. My Padawan will immediately chastise ANY person who suggest otherwise.

(*) Said Padawan shall also work quickly to dismiss as a coward any person
who shall attempt to claim military service or credit based upon the
service or sacrifice of others solely for his own gain.

(5) My Padawan shall not make offers to provide information or files to other RRAP participants via private e mail, then use that opportunity to send text, .jpg or other files that may be deemed inappropriate, obscene or contrary to what was promised. (See #3 above)

(6) My Padawan shall adhere to all Amateur Radio regulations, shall only claim to do or have done those things which are factual and documented and represent the best interests of the Amateur Radio service as a whole. Where documentation may have been lost or otherwise made unavailable, the Padawan will provide the names or callsigns of those who can verify in some degree the factuality of the operation concerned.

(7) Lastly, my Padawan shall not provide aid, comfort or support to any person who has demonstrated a gross disrespect for the Amateur Radio service or it's licensees, who acts to antagonize and harass those whom are lawfully and duly licensed in the Amateur Radio service, and who acts in such a way as to cast aspurgences on the Service, it participants or supporters.

Remember, Brian, ANYTHING other than a carte blanche acceptance of these conditions completely voids your acceptatance as Padawan Learner, and forever bars you from stating or suggesting that any mentor-padawan relationship exists.

Steve, K4YZ

> be true indefinitely as it's use shrinks and deminishes.

Can't figure out that statement Clint ....I would agree that the mode is not used as much as it was in the past but I would wonder with the internet if the service as a whole was taking a hit. I am not bemoaning that happening as life is life and change is change. There are a lot of wholesome hobbies or endeavors out there Clint but I hope the service remains viable for the next generation to enjoy. Perhaps that will come with testing of CW being eliminated ....I hope that a positive impact will happen ..but again I wouldn't bet the kid's college fund on it.

God Bless 73 Tom Popovic KI3R Belle Vernon Pa

TVs can be used as clandestine xmitters so don't worry, they'll be
included in reg requirement as will all AC & DC broadcast radios.

Aren't you glad you live in a demo[n]cracy instead of that anciente,
obsolete republic?

Well, it has (allegedly) kept several of the master-debators in this newsgroup off of HF... (Actually, it is their own laziness and lack of character that holds them back, not the code, but we'll skip over that for now.)

Because they cannot legally operate anything except VHF/UHF equipment, HF is a better place to operate today!

Note that I do not have a strong opinion, one way or another about the code/no-code debate, but I do have an opinion about the debate, itself.

I think that we should applaud QRZ.COM for developing a "zero tolerance" policy toward people who try to change any of the forums there into a code/no-code debate. They announced recently that code/no-coders will be summarily booted off of the QRZ system, just as quickly as they identify themselves through their actions.

I'd like to see more of that.

Being able to "apologize" is worthy, Brian.

Being able to not offend in the first place is even better.

> I leave the Avenging Angel stuff to you. You do what you're best at -
> trying to destroy anyone who might disagree with you.

It's not about "destroy(ing) anyone who might disagree with
(me)", Brain...It's about not tolerating that which I know to be false
and is known to others.

You make silly, even stupid assertions and claims and then take
offense when people pile up on you for being silly and stupid.

That's YOUR "fault".

"Style", Brain?

"Tactics"...?!?!

There's not a "style" or "tactic" being employed here. You make
silly, even assinine assertions that are either easily disproved or
are not substantiated by some sort of fact or evidence, and then you
try to push the consequences of that failure off on someone else
because you can't stand the heat.

Sorry. Your bust.

It's not a "lie" to show someone else that he's acting foolishly.
Especially when the other guy just keeps piling on the evidence to
prove it.

>

Dwight,

I'm shocked that you don't understand one of the great religions of Amateur Radio. Morsodism has been widely discussed here on rrap, but you're kind of an ignorant newcomer, so I'll fill you in.

So you want to be a Morsodist. It's not easy, you know: you'll have to impose the stiffest constraints on your mind, accepting authority without question -- you will be subject to jeers and persecutions at the hands of the Spawn of Oracle, and you will suffer during your entire lifetime trying to throw pearls before the swine. But in the end, you will receive your reward from the Almighty in Heaven, and you will have the satisfaction of seeing all others being tossed into the Lake of Fire.

But enough of that; you're not there yet. You must first prove yourself worthy of being a Morsodist.

Lesson One: Developing Your Psyche

Right now I would like you to relax. That's it -- just sit quietly and let your mind go blank. Concentrate on one thing and one thing only: concentrate on your thumb. Now that thumb is no ordinary run-of-the-mill thumb: what you see is THE THUMB. That Thumb is your world. Nothing besides that Thumb concerns you in the least. As far as you are concerned, that Thumb rules over all. The only thing that should be in your mind right now is your Thumb and its absolute authority over your life. Each and every line, ridge, wrinkle, and bit of cuticle is a Divine Mandate, eternal in its wisdom, power, and relevance. That Thumb was made by MORSE, and its sole purpose is to guide you to your Salvation.

Now, while still concentrating on that Thumb, begin to think about the world around you. Careful! Don't try to take in everything at once: start with the rest of your fingers, and slowly spread from there. See how your fingers are connected with and dominated by your Thumb. Now, slowly extend your perception to embrace your forfinger. It too was created by Morse, and it is all guided by the Thumb. Between your thumb and forefinger lie all the secrets of Morse. The rest of the universe is of no concern.

Lesson Two: Establishing Your Doctrine

Congratulations! You've come a long way, but you're not there yet. What I want you to do now is to go to the nearest book store and purchase a copy of the FCCRuleBook. Preferably, it should be bound in nice, shiny black leather, and should have gilt edges and a red silk ribbon. It should be fairly hefty in size, but not so large that you cannot hold it with one hand. Finally, it should have the words of Samuel in red letters, for as you know the Son of Morse only spoke using red letters.

Now that you have yourFCCRuleBook, read it, and read it thoroughly. I imagine that some of it will fit in perfectly with your beliefs and morals, since you have been inspired by Maxim to attempt this indoctrination into Morsodism. As you read, you must remember that your beliefs are the ONLY right beliefs, and all others are falsehoods and are totally incompatible with Morse Divine Truth.

Now you may be dismayed as you read through the FCCRuleBook to find that much of it is outside your beliefs, or may even contradict them. No problem! All you have to do is take a black marker pen and blot out those paragraphs which you don't like. Simplicity itself! Now don't you worry if it seems that more of the FCCRuleBook is blacked out than left behind: just remind yourself that the remaining words are emphasized all the more.

Lesson Three: Living a Morsodist Lifestyle

Well, I'm sure that you Novices are simply bursting with questions on how to apply your new-found faith to your lives. I am pleased by your enthusiasm: such zeal is a necessity if you want to begin to work your influence on this filthy and sinful world and mold it into a clean and upright one. Those Spawn of W5YI are simply itching to be preached at, whether they want it or not, so let's get cracking.

First, obtain for thyself some sort of access to the internet newsgroups, specifically any (and all) newsgroups in the "rec.radio.amateur.*" lineage. Never mind that only one of them, the "policy" group is fit for Morsodists like yourself; you must spread the word ALL the heathen Oracalists. Crosspost like crazy, verily even if attacked by Horrible Herman, the Lord High Newsgroup Purity Defender.

As you preach the word of Morse to others, you will inevitably run into those who not only doubt the veracity of your words, but who also pose trick arguments inspired by Lenny Liberal and his henchman, Crazy Charlie, the head Oracalist, in an attempt to trap and discredit you. This lesson deals with some of the major swords wielded by various tempters, and gives you some ideas on how to parry those weapons.

Technobabble scholars: these vermin use their high-falootin' technical jargon and book-learning to pervert the words of the Morse and read things into Part 97 which aren't there. The FCCRuleBook was written by Morse for YOU to use, and contains EVERYTHING you need to know for

Salvation, plainly stated in black and white and red. There is nothing magic or mystical about it: it speaks out in the Words of Morse and speaks directly to YOU, as you have personally modified it to your belief set.

If other Spawn of Oracle say that the FCCRuleBook cannot speak the utter Truth because it is inconsistent in what it says, you can reply that there is no inconsistency in your FCCRuleBook: everything that you have in your FCCRuleBook perfectly supports your beliefs (remember Lesson Two). If they quote passages from the FCCRuleBook which they claim contradict your beliefs, you can reply that Oracle has inspired them to pervert the words of Morse and to twist their meaning around in order to try to subvert the Truth. If they say that you are being totally ignorant and irrational in your absolute belief in your Morsodist Doctrine, you can reply that they are being totally ignorant and irrational in their absolute refusal to believe in your Doctrine. And if they say that you are shutting your eyes to reality, you can reply that they are shutting their eyes to Morse.

Peace to all of you!

Dwight, I don't believe that NCI's official position at this time is to remove Morse code as a mode.

But with all due respect, the argument that simplification of the discussion from something like NCTI to NCI is to say the least, laughable. I go through more acronyms than that before getting dressed in the morning, and can handle the extra T easily.

Let's take a ignorant but intelligent bystander who sees the words "No Code International".

Without a person or written material to pursuade him that it really means No Code Test International, Tell me the assumption that he is going to make.

Can you with a straight face, tell me that the person is going to assume that it means elimination of the test?

Just to clarify, this is what the article at

http://ewh.ieee.org/reg/7/millennium/radio/radio_differences.html

says about it:

At the turn of the century Fessenden was using a spark transmitter,
employing a Wehnelt interrupter operating a Ruhmkorff induction
coil. In 1899 he noted, when the key was held down for a long dash,
that the peculiar wailing sound of the Wehnelt interrupter
could be clearly heard in the receiving telephone. He must have had
a detector of some sort that was working for him, even at this
early stage in the development of wireless. This suggested to him
that by using a spark rate well above voice band (10,000 sparks/sec),
wireless telephony could be achieved; and this he did transmitting
speech over a distance of 1.5 km on 23 December 1900, between 15 metre
masts on Cob Island, MD [Belrose, 1994a; 1994b].

In autumn of 1906 Fessenden had his HF alternator working adequately
on frequencies up to about 100 kHz. About midnight in
November, 1906 Mr. Stein at Fessenden's Brant Rock station was telling
the operator at a nearby test station at Plymouth, MA how to
run the HF alternator. It was usual for these two operators to use speech
over this short distance. However his voice was heard by Mr. Armor at
Machrihanish, Scotland with such clarity that there was no doubt about
the speaker, and the station log books confirmed the report

[...]

Fessenden's greatest success took place on Christmas Eve 1906, when he
and his colleagues presented the world's first wireless broadcast. The
transmission included a speech by Fessenden and selected music for
Christmas.

So, while the first radio voice broadcast was made at Christmas, 1906, using an alternator, the first radio voice transmission of any sort was made 6 years earlier using a spark transmitter.

The description of how the spark transmitter was used to transmit voice makes perfect sense to me. If you take a band-limited continuous waveform and transmit discrete samples of the waveform taken at a rate which is twice the maximum continuous frequency (i.e. 10,000 amplitude-modulated sparks per second for 5 kHz bandwidth audio), then low-pass filtering the received signal back to the original bandwidth will reproduce the original continuous waveform. This is from the Nyquist(-Shannon) sampling theorem, though if I recall this was done a quarter century before Nyquist's paper on digital (telegraph) signals over bandwidth-limited analog channels and a half-century before Shannon explained what this meant for discrete sampling. That's pretty neat.

I can tell you with a perfectly straight face that an uninvolved bystander probably wouldn't think anything, simply because the issue doesn't mean anything to him. As far as I can see, only an involved ham would have any interest in NCI at all, and that type of person would surely know what the debate is all about.

However, the words you quoted had nothing to do with NCI. They were intended to address Jim's desire that everyone opposed to the code test must specifically use the words "code test" during any discussion of the issue.

Not when the two parties are participating in a conversation specifically about dropping the code test, which is the current debate throughout the ham radio community, Jim. Therefore, anyone who wants to change the debate to focus on code itself, instead of the code test, would have the burdon of being more specific to have his or her intent fully understood.

In reality, requiring specifics with each message posted in an existing debate would tend to stiffle that debate, which I suspect is the underlying goal of some of those demanding specific words and phrases from their opposition in this debate.

> I don't drop words that are needed for clarity. (snip)

Clarity of what - explicitness, focus, intent, meaning, unambiguity, or all of these? There are many types of clarity, Jim. Without specifics, I cannot be certain exactly what you mean. ;-)

>
>There's this pot and this kettle....

The FCC doesn't require any commissioners or staff to hold amateur
radio licenses in order to REGULATE amateur radio in the US.

So, Capt. Jimmie and the Avenging Angel of the United States Morse
Codists (USMC) are going to charge the FCC with "unlawful activity?"

>> a disaster...filling sand bags...)

Poor USMC psychotic had another delusion. I've never "filled sand bags." That must have been a duty the USMC no-com did (no doubt taxing his intellectual capability to the limit).

What DIRECT ACTIONS have the illustrious military expert Capt. Jimmie or the USMC no-com done? Illustrate by verifiable references.

>> Are we to assume that YOU are of the opinion that it's OK for YOU
>> to express opinions on matters for which you have no practical
>> experience, but it's NOT OK for others to do the same...?!?!
>
>You just figuring that out, Steve? ;-)

Stebe still doesn't understand the U. S. Constitution or its First Amendment. It would seem that Capt. Jimmie, military and socio-political guru, doesn't understand it either.

Fantastic intellect...should have become an Amateur Extra.

Fessenden didn't use any SPARK transmitter for that famous 1906 Christmas Eve broadcast. It was a rotary alternator of about 750 Watts output on about 70 KHz.

You can see the microphone used on Thomas H. White's US radio history pages. Direct series connection with the antenna lead.

>And by using headphones with poor response above a few kHz, much of
>the noise would be filtered out.

Brilliant intellect, Capt. Jimmie. Finally got your Masters' dust shaken off it, did you?

>Of course when he got his paws on a suitable Alexanderson alternator,
>the spark idea was abandoned. His alternator would go as high as 100
>kHz and was rated at 1 kW.

Fessenden used 750 W rotary alternator at about 70 KHz for that 1906 Christmas Eve broadcast. Try to get close to real electrical values as recorded by history.

Now, I might be wrong, but this forum is about AMATEUR RADIO POLICY of today, not long, long ago before you or the USMC no-com existed. Neither is it about WW2 or WW1 nor of ancient history in radio when the label "ham" was a pejorative.

Of course, this could be just another United States Morse Codist's CHAT ROOM where all morsemen gather to give each other high-fives about how they are all leaders, movers, shakers in radio for their mighty macho morsemanship. Feel free to talk anyone down who doesn't agree with the tenets and catechisms of morse. That should be your sworn duty.

"Little Billy Beeper" is "officially published!" :-)

Gosh, that's practically the same as being printed on real paper with real ink! Get it hardbound, old-timer, charge extra for special first editions with your autograph! Get on the Today show or Late Night with Letterman, spread the word.

Sorry, your copyright claim was busted with all those copies you made in here before.

While you are at it, why don't you explain how McGraw-Hill is "wrong" and you are "right" that ol' Reg Fessenden used a SPARK transmitter in that "famous voice broadcast" of Christmas 1906.

I wan't to see how "real research" is done.

You might also want to argue with Thomas H. White's on-line history of United States radio as it was before 1928. I'm sure you charge him with "poor research" too. There's Jack Belrose up in Canada...

Lots of good luck on that one, now...

"Advanced Avionics" to Ace Airman Stebe: Switch-over from tube
aircraft intercom sets to transistorized aircraft intercom sets.

Brian, give him a common AN/ARC-201 and he doesn't know what
in hell it is. He MIGHT know about an AN/ARC-27 but that's only
because it has been in USN inventory since before 1970.

Stebe never "lies." He tells untruths, he makes mistakes by the
ton, but he is a loyal USMC (United States Morse Codist) and
follows orders posted at Hq bulletin board in Newington.

The medical folks at Glendale Memorial thought Efren Saldivar was
a good respiratory thereapist nurse...until too many patients
assumed room temperature while under his care. Fully certified,
lots of pretty paper attesting to his expertise. The "angel of death"
is now in lockup. [Glendale, CA, old established and modernized
hospital in the Glendale hills]

Fantastic similarity.

Careful, Brian, those are His study books for the Civil Air Patrol.

He is still working on the meaning of "PIREPS" and has just started
to memorize "isobars," discovering that they aren't for a lockup for
that most heinous of all "service" crimes: Lying.

Wouldn't it be fun if he found out what "adiabatic lapse rate" was?
:-)

I was talking about QRZ. The point, of course is I am not necessarily a
member of a tiny minority in thinking of the code/no-code debate as being
almost 100% noise.

That, and commenting that it's good to know that the forums at QRZ will be
staying a bit more on-topic from now on.

1594. What If.....

Newsgroup: rec.radio.amateur.policy
Date: 2003-10-22 22:08:03 UTC
From: Leo <nomail@nope.org>
Message-ID: <53tdpvsmkt6a3foqf6tp2v0iqakn8ogvlh@4ax.com>
Source record: 81170

A different approach:

Abstract: Much of the current operating practice and licence requirements for amateur radio appear to be the way that they are because of the evolution that has taken place over many years since it was first established. Politics and tradition seem to have had immense influence over the current state of affairs - with technological developments coming in a poor third at best. Artifacts of the past remain 'on the books' for no other reason than things have always been that way.

Perhaps the most critical way to look at the current code / no code / easier tests / harder tests deadlock is to ask the question: If the Amateur Radio Service did not exist, and was being proposed as a new service in 2003, what would it look like?

Assuming that the same ham bands that we really do have today have been set aside for the new service:

- What is the overall mandate for the service? (pure hobby, civilian radio expertise development, emergency services augmentation, experimentation, etc.)
- What modes would be allowed? (e.g. DSB AM, FM, SSB, CW, Digital data, Digital audio, etc.)
- Would any modes be restricted or banned? Why?
- What licence classes would be created? Why?
- What privileges would each licence class be granted? Why?
- What theoretical and operating knowledge would be tested? Why?
- What modes would be practically tested? Why?

In each case above, the question 'Why?' pertains to the overall goal that is being aimed at. If 3 licence classes are proposed, for example, then what are the specific objectives? (example: higher level licence can establish and sponsor a club repeater, or build and repair their own transmitting equipment, etc. - tasks requiring a higher level of technical and operating knowledge than a lower level operator).

Vanity, personal preference, tradition and history should not enter in to the equation - just technical requirements. Think analytically - its a service being created to fulfil a mandate, the framework is structured simply to meet that goal. Nothing more. What was acceptable technical practice in 1910, or 1950, or 1999 is immaterial for the purpose of this analysis - the benchmark is today, 2003. For example - if the service was created this year, would we test CW proficiency? And for what purpose? How about SSTV, or Amtor?

Maybe, by building a model of the service from the ground up using 2003 as a starting point, a picture of what the current service should become may emerge?

And, in the spirit of Mike's earlier thread, let's try and keep the mud slinging and name calling out of the equation - please!

1595. Responses to 14 Petitions on Code Testing

Newsgroup: rec.radio.amateur.policy
Date: 2003-10-22 22:38:45 UTC
From: lenover21@aol.com
Message-ID: <20031022183845.25815.00003911@mb-m07.aol.com>
Source record: 81171

Before the Commission there are 14 petitions concerned with Morse Code Testing for U. S. amateur radio licensing. The first 7 petitions, RM-10781 through RM-10787, are largely concerned with dropping the code test. Supposedly the window for Comments is already closed on those but new Comments keep appearing on the public record. RM-10805 through RM-10811 are largely concerned with keeping the code test. Supposedly the window for those Comments will close on 7th of November.

As of the end of the business day 21 October 2003, the number of Comments on each RM are as follows (only last three digits of RM shown):

781: 314
782: 264
783: 267
784: 247
785: 250
786: 411
787: 662 sub-total 1,227

805: 148
806: 142
807: 108
808: 118
809: 111
810: 116
811: 484 sub-total 2,415

Grand total for all comments: 3,642

Note: Each RM number's first document is the original petition.

Note: Numbers for each RM are taken from the FCC ECFS.

Keep on trolling for arguments, Mike, sooner or later someone will
bite on your bait. Try to avoid leaning too far over the gunwales or
something big will bite you.

Try to remember that No Code International was started by Bruce
Perens, long before an Amateur Extra tested at 20 WPM.

>> However, the words you quoted had nothing to do with NCI. They were
>> intended to address Jim's desire that everyone opposed to the code test must

>years earlier using a spark transmitter.

I agree with what you said here but that is NOT what the brought
on Hans Brakob's ranting, raving, and jellied jeremiad about "poor
research."

Brakob SPECIFICALLY stated that Fessenden's 1906 Christmas
voice broadcast used a SPARK transmitter. Miccolis, presumably in
Brakob's defense, tried to misdirect by pointing out the 1900 test by
Fessenden with the 1906 broadcast. Miccolis did not correct Brakob's
false statement, but attempted to misdirect into other subjects when
Brakob was confronted with his error.

My general source of old radio histories are several but I keep one
on the bookshelf, the Electronics magazine special 50th Anniversary
edition that covered ALL electronics and radio prior to 1980. Right or
wrong, printed matter cannot be changed by any webmaster or
website author. For Internet sources of old radio history, I prefer
the excellent works of Thomas H. White, at the new address of

http://earlyradiohistory.us/index.html

There is a close correlation of what the 1980 Electronics magazine
description of the 1906 Christmas voice broadcast and what White has
in more detail on his site. The microphone for Fessenden's 1906
broadcast was not water cooled (as Electronics writers speculated)
but air cooled and the picture on White's pages indicates it is robust
and designed to dissipate heat (as the photo caption put it).

Jack (formally John) Belrose is a familiar name to Antennex readers
(www.antennex.com, a specialty site for antennas) and his recreations
of early spark transmitters as they MIGHT have been made by
Fessenden are interesting. However, let's face it, Fessenden's first
experiment in 1900 was done with only ONE OTHER experimenter
only ONE MILE distant and witnessed by no one else.

Fessenden's experimental broadcasts (plural, involving several things
in communication) at Brant Rock involved many persons, primarily
financial backers paying for everything. Radio was a hot item and
many were getting involved for a piece of the action back then. Radio
in those prehistoric times involved money (few components available,
nearly everyone had to build everything themselves) so it was seldom
an "amateur" activity. In Thomas H. White's pages you will note that
Fessenden dropped out of the radio experimentation game after that

historic voice broadcast due to disagreement with his backers.

That 1906 voice broadcast involved a 750 Watt alternator "RF source"
at 70 KHz and the "modulator" was a carbon microphone in series
with the antenna feed line. [technically that is "down modulation" of
a carrier, no gain of RF power on peaks as with conventional AM] It
stands to reason that the heat losses in that microphone were
considerable (hence the obvious robust design in the White collection
photo). Manual holding of such a microphone would be prohibitive,
much the same as an American Beauty 100 W soldering iron uses
an insulating wooden handle. Practical application of the Fessenden
voice broadcasting experiment was an obvious no-no. There were no
interested parties eager to buy rights to the system and, for the times,
no one wanted to pirate the system.

Yes, Reginald Fessenden is acredited with being the first to broadcast
voice on radio frequencies. No argument from me on that.

Hans Brakob is NOT a qualified judge of fact correction when he
confuses both dates (6 years difference) and the type of transmitter
and then contends that another is "guilty of poor research."

>The description of how the spark transmitter was used to transmit voice
>makes perfect sense to me. If you take a band-limited continuous waveform
>and transmit discrete samples of the waveform taken at a rate which is twice
>the maximum continuous frequency (i.e. 10,000 amplitude-modulated sparks
>per second for 5 kHz bandwidth audio), then low-pass filtering the received
>signal back to the original bandwidth will reproduce the original continuous
>waveform. This is from the Nyquist(-Shannon) sampling theorem, though if
>I recall this was done a quarter century before Nyquist's paper on digital
>(telegraph) signals over bandwidth-limited analog channels and a half-century
>before Shannon explained what this meant for discrete sampling. That's
>pretty neat.

A lot of early papers on electricity and "radio" may "sound neat" but,
despite the descriptions by learned gentlemen with many letters
after their names are FAR from "neat" when seen today. Reginald
Fessenden did not invent sampling theory any more than Lee deForest
invented electron geometry inside vacuum tubes. Both had IDEAS,
inspirations, hunches, bursts of thought or whatever and were willing
to tinker and try. Some succeeded. Many did not.

A Professor Langley convinced the US Navy that they should under-
write his aeroplane thing and even converted an old Navy vessel to be
the first aircraft carrier (or one with a landing area). Nice try. The
Langley aeroplane flew...off the end of the deck and into the water.
Splash. TS. Off in another place a couple of bicycle mechanics were
busy tinkering with rudimentary aeronautical engineering and made the
FIRST heavier-than-air powered flights...and won the first US military
contract for a heavier-than-air-craft (by the Army's Signal Corps) to
start the whole aircraft world.

By some VERY elastic stretching of things, one can say (presumably with a straight face) that James Clerk Maxwell "invented EM radio propagation" by coming up with his equations...or that Heinrich Hertz was "the first VHF operator" or "used spark the first time for radio propagation." I wouldn't. Few would...even though, in a mighty exaggerated way, those are true. Some would go to such lengths for newsgroup message points and "getting even" with another and devote a large part of their free time absorbed in such. :-)

There are MANY, many "firsts" in radio and none can claim to be THE first. Unfortunately, some folks have devoted hero-worship of certain individuals and over-emphasize their accomplishments; their righteous anger at not finding agreement leads them to outrageous statements in here. Not my problem...until they start to get personal. :-)

Not everyone, Mike. Just the ham operators who visit this newsgroup and
eventually participate in the code testing debate.

It is NOT widely agreed that code use is on the decline. I am happy to report that articles earlier this on contest participation on the ARRL site show that there has a been a 20% rise in participation in the CW contests from the previous year while participation in voice contests stayed flat (i.e. no growth).

>will get the priveleges anyhow.

Exactly!

> That sounds a LOT like simplification to me.

Sounds like a giveaway to me. And it sets a very bad precedent: If it's OK to
give all Techs a free upgrade to General, why not throw away most of the
General question pool and use the Tech one instead?
>
>>Remember, that before the changes that created the present no-code
>>tech, the General and Tech exams were identical. Only the code
>>separated them, and even there it was only the difference between
>>5 and 13 WPM.
>
>But its not that way now.

And it wasn't that way back when the Tech code test changes were made!

Quick history:

From 1951 to March 1987, the General and Tech had the same written. In March of
1987 the General was split into two elements, 3A for Tech and 3B for General.
Almost four years later (February 1991), the Tech lost its code test.

This isn't ancient history, and anybody writing a policy paper should know how
the previous system came to be. And it's not the only factual mistake in the
paper.
>
>And finally, before I forget about how I was charmed about the glasses

If the ideas are good ideas, they will stand on their merit. The person histories of the committee members is not the issue. If they're such great folks, why don't they let the merits of their ideas convicne us?

Quick aside: I first became aware of W5YI about ten years ago when my license needed to be renewed. I got this official looking letter saying that for just $5 they'd help me renew my license. All I had to do was fill in the form, sign it, write a check for $5 and send it to them.

Never mind that I'd been dealing with the FCC since I was 13 and had renewed and modified my license at least 9 times before with no problems at all. They thought I needed "help".

At first I thought it was a joke - after all, the licensee still did all the work of filling out the form and mailing it. If there was something wrong, FCC would kick it right back - but the procedure for a simple renewal is so basic that anyone who couldn't figure it out from the instructions on the form probably shouldn't have the license anyway.

But I did some asking around and found it was real!
I wonder how many hams thought it was some sort of official letter and ponied up the $5.

Instead, I filled out the form and sent it to FCC. And I swore W5YI would never get a nickel from me.

>And to make sure that they insult other hams who don't do things like

They've been in motion for years and years. I put the change back about 1975.
No single change has been very big but the end result is enormous.

> is in the July issue - and I can only find June and August...

Yes, that is a wonderful way of storing back issues. I have a couple of
CDs burned so far with the MT Express issues I've downloaded. Very
handy indeed.

With QST, it's unfortunate that the League is so short-sighted on this
matter. They offer you the CD-ROM at a pretty high price, and then only
about six months after the end of the year. I would MUCH prefer it if
they would provide me the option of downloading each month's issue.

> I wonder if broadband prices will ever drop to dialup levels?
> Personally I have a very hard time justifying the (very) roughly
> $200/year difference.

SBC is offering DSL in their service areas for $29.95 per month for the
first year of service. That's not much higher than dial-up, considering
the leap in bandwidth. I don't know if that includes unlimited dial-up
while traveling, though. RoadRunner offers SOME of their subscribers a
princely 10 hours of dial-up, with additional dial-up time costing
something like $8 per hour. Since I travel somewhat frequently, the
dial-up issue is a biggie for me, so I opted for Earthlink when they
became available through my cable provider (Time-Warner). They offered
unlimited dial-up, so I'm covered when on the road, PLUS they are $3 per
month cheaper than RoadRunner. Unfortunately, they're also pretty
stingy when it comes to newsgroups, but that's another story.

> On the other hand, we may be fast approaching the point where the sum
> total of the malicious executable emails being spammed into our
> mailboxes and the critical updates necessary to protect against them
> every day will take more than 24 hours to download via dialup!

Yeah, I know what you mean. I recently went on a trip to central Europe
for a couple of weeks. (Great trip, I'll tell you all about it if
you're interested but it's =way= OT otherwise.) I have a Yahoo! mailbox

that I paid extra to have expanded to 100Mb of storage plus POP3 access;
during that trip of about 12 days, that mailbox filled up to about 75%
of capacity before I got home (I'm on quite a few lists, Yahoo! Groups,
etc.). When the Sven worm hit, my mailbox filled to overflowing (101Mb)
in the space of a single weekend! If I get my hands on the <expletive
deleted> person who wrote that thing....

Kind of on a par with Matthias Rust, the German student pilot who flew
his Cessna into the Soviet Union and landed in the middle of Red Square
during the annual Border Guards something-or-other holiday. Definitely
made a statement!

They mentioned on the radio (KNX 1070 in Los Angeles) that he has also
been protesting the mandatory draft registration, but that protest
hasn't been making any real headlines. You have to wonder, then: is he
just trying to make headlines regardless of the cause, or what?

It won't work, Leo. You can't summarily dismiss over a hundred years of evolution to blithely "construct" a totally new and ostensibly improved ARS with the wave of a magic wand. Ham radio has been around for entirely as long as ANY radio had been here, and even the venerable Marconi himself often stated that he considered himself to be a ham, and certainly he was, as was every other individual who experimented on the with the amazing new science of radio in those times.

A newly-constructed ham radio, built entirely from the ground up with no regard to what has gone before, would look far more like MURS, FRS or some legimatized version of CB than anything else, with whatever bit of advanced digital involvement you could find anyone willing to assume. For the most part it has become clear that most of tne "new age" advocates would give a pretty small nod to any other than voice modes that are the main interest of almost everyone who wishes to take that route. When you know nothing about (or ignore) what's already there, spread throughout the human race around the planet, how would you construct anything that took advantage of what is already present and in wide use, both hardware and operator knowledge/skill? What a collosal waste!

So that puts your proposal in the same inbasket with KL7CC's "vision"- Nothing from the past means anything and don't let's waste our time pretending it does. At least that conclusion can easily be drawn from his paper. To follow such a course is to abandon 100 years of MUCH more than just tradition.

I'd like to see anyone tell the US Marines they had to disregard their entire history and start all over again from scratch. Something on the same order applies here. History is something that can't be cast aside just because someone has their own vision and prefers to ignore it.

Dick

Your question requires the respondent to accept the false premise that Amateur Radio is a creation born of regulations. It is in fact a creation constantly being reborn, evolving over time by the influence of its' members, and the regulations in force at any given time are at best a reflection of that influence.

Thus, the notion of creating a "new" Amateur Radio Service out of thin air without regard to its history is akin to asking "if the Mississippi River were being invented today, where would it run?"

Heh heh heh...Guglielmo Marconi an "amateur?!?!?" Hardly. :-)

He went after monetary income as well as patent control as soon
as he managed to get his new radio system practical. Try looking
at Real History, old-timer.

If you look at Leo's proposal (discounting the fact that he still hasn't
identified himself), there's nothing really amiss there. That's his
opinion and he's thought a bit about it.

> A newly-constructed ham radio, built entirely from the ground up with

Of course, old-timer, "much" more. Perhaps even your raison d'etre
(reason for being).

Everything must, in your world, remain exactly as it was when you
were young. Forget everything and everyone else.

> I'd like to see anyone tell the US Marines they had to disregard
>their entire history and start all over again from scratch. Something

From: Twistedhed <twistedhed@webtv.net>
Message-ID: <3f97666a$1@ghostsearchers.com>
Source record: 81188

I am posting here because of some of the nasty things I have read in this group and in QRZ discussions regarding freebanders. We who use the frequencies from 27.405 to 28.000 have more in common with hams than you might think. We are good operators and have knowledge of propagation and skip conditions. We use Yeasus, Kenwoods and Icom radios just like you do, so we know technical issues as well or better. However, the attitude of some hams toward us is rude and condescending. We are treated like 2nd class citizens. This should not be. We have the same rights under the constitution as legal hams do. For those that do not wish to be under Uncle Sam's thumb, freebanding is a viable alternative to getting a ham radio license. What I am saying is that maybe the next time you meet a freebander you might talk with him before you condemn him.

I am QRT and standing by. (No flames answered. Please reply via email)

Well said, Hans!

I'd add that I doubt something like amateur radio as we know it *could* be
created today, simply because other services would not want to give up *their*
spectrum.

You've got it all wrong again, Stebe (and acceptance of all such
grandiose misbeliefs in Amateur Radio isn't worthy of mentorship).

You've merely mentored me in the misspelling of peoples names. That
is all. You can chalk that up with all of your other misdeeds.

73, Brian

There is legislation pending in Congress to legalize freeband.
Does anyone have the reference number of this legislation?

This exact same message is posted every few months in an effort to troll for suckers who will bite on this obvious bait and respond angrily to the person supposedly sending it. However, the name associated with this message often changes, strongly suggesting the sender listed this time ("Twistedhed") didn't write it. Instead, the message's header is often faked with someone else's name and email address, usually someone the actual sender doesn't like. The actual sender requests an email response so the inbox of the targeted victim will be filled with your responses.

Ignore this message or only respond to its general content in this newsgroup. Don't send email. Even if "Twistedhed" did post this message, a response here in this public newsgroup will be far more effective than an email message nobody else will see.

Right. Is this the same legislation that recently authorized local police enforcement of the illegal radio activities in and around the CB frequencies? If so, that would be HR-2346, now passed and part of the United States Code of Federal Regulations.

Rust's stunt was a whole 'nother level up, To successfully get away
with penetrating the Soviet air defenses in that global hot spot with
a just Skyhawk then having the audacity to fly it all the way to
Moscow unchallenged *and* plop it onto Red Square has to be one of the
all-time government-shaking stunts pulled off by an individual. And he
did it to a regime which had no qualms about shooting down commercial
airliners which strayed a few miles into their airspace. The kid had
gonads the size of watermelons. He drew a ceremonial year then they
tossed him back over the wall. In the meanwhile back at the Kremkin
legions of Soviet military heads rolled. OYeah, Rust made a
"statement"!

> They mentioned on the radio (KNX 1070 in Los Angeles) that he has also
> been protesting the mandatory draft registration, but that protest
> hasn't been making any real headlines. You have to wonder, then: is he
> just trying to make headlines regardless of the cause, or what?

He's a student at a Quaker college which explains some of it. Quaker
ideology includes often strident far-end pacifism and they've opposed
conscription and war going back to roots of their faith in the early
1600's in England.

"As a Peace Church, the Society of Friends (Quakers) has always played
a leading part in opposing preparations for war. The Peace Testimony,
which is a very important Quaker principle, arose out of the belief in
the in-dwelling Light or ``that of God'' in people. If that of God was
a reality within oneself it would be denying the inner Spirit to take
up arms against another."

http://websyte.com/PositiveChurch/quaker.html

The rest . . . ? Who knows . . no doubt we'll get his explanation at some point after he's "duly processed" by the same gloms he embarassed the hell outta.

Correct Dick. Just because its new, does not make it better. And I'm not saying go backwards. Im saying to consider the past progress and learn from it. Keep history in mind. If our politicians would do that....well, thats too off topic. But you get my drift.

It certainly was. The thing was in a four-foot rack cabinet and used a
2400V, 5 KVA pole pig and a doubler circuit along with some mongo
oil-filled electrolytics.

I've used any number of commercial yagis and even a couple of multiband
verticals such as the Butternut HF-2V with 160m kit but I've never
bought a wire antenna :-)

> Did I mention shack furniture and accessories (shelves, tables, etc.),

> standards, perhaps, but they do the job.

The main operating position here is made from a flush-type door on a 2 x 4" frame, supported by 4 x 4" legs. There's a shelf beneath for power supplies and a two-shelf angled console above for rigs and accessories. Studio "B", across the room is the massive old oak veneer operating desk from W8YX, the U. of Cincinnati club station. It was featured in QST's writeup of the 1937 Ohio River flood.

> There's also the Tymeter mechanical digital clock I assembled from the

Neat but indicative of the dumpster diver mentality, Jim. I'm afraid I'm one of those too! I can't pass up old Alliance TV rotors and control boxes. One turns our TV antenna, one turns the chimney-mounted FM yagis for 144 and 440 MHz and one turns the 160/80m hardline receiving loop.

> And when I find a space for a computer in the shack, it will be a
> home-assembled one.

Except for my laptop computer, all computers here are home assembled "white boxes" and are networked (but I bought the hub boxes).

By the way, have you heard of the new Chinese-produced Linux variant? It is called (no kidding) Red Flag Linux.

Message-ID: <il7gpv4gjg2hlo3n283c3iobp0l52nfrl0@4ax.com>
Source record: 81111

Points well taken, Hans. I suggest, however, that the question (what the amateur radio service would be comprised of if it were created today) must be explored in order to validate what 'historical aspects' of the hobby still apply in 2003 - a 'sanity check', if you will.

As I understand it, the ARS was created in early 20th century to fulfil a need (to provide a pool of trained operators, I believe, with experimentation and development mentioned as other objectives). This mandate has evolved over the years, and maybe it is time to review and bring it in-line with the requirements and technology of today.

The ARS is certainly not a service born of regulations - but it exists today because the regulators allow it to do so - if we don't have a clear idea of specifically why it should continue to exist, or what it should be composed of, how can we justify it if and when the time comes? We cannot convince regulators to maintain CW testing, as an example, if the best arguement that we can come up with is "history"! It was put there by regulation for a reason - and it needs a reason to survive. Regulators don't deal in nostalgia....and if a push comes to approve a potentially multi-billion dollar rollout of a service like BPL, they are going to be hard-pressed to stave it off on our behalf without a solid justification of why the ARS is still important!

I raised this question because, frankly, the vast majority of arguements that I have read in this newsgroup have been driven by emotion, nostalgia or historical references. If someone proposes that CW should continue to have exclusive band assignments because it is a great mode to use during emergencies due to its inherent readibility through noise, and that CW testing should continue to ensure that a pool of CW-competent operators is maintained for emergency comms, then OK, good point - maybe it should. OTOH, if someone proposes that CW testing should continue because thats the way its been since the beginning of time, then - who cares? What relevance does that statement have to do with today? So what?

Successful businesses have learned to do this type of review on their internal processes in order to survive, in the interest of efficiency (and, for fun, watch what happens when some idiot tells the departmental VP that something is being done because it has always been done that way - wow! - never happens twice!). If something is being done, and no one can properly justify it, then out it goes. Replaced by a new and (hopefully) better process, or abandoned altogether if no longer needed. We could learn something from this too.

Someone has suggested that if amateur radio were invented today, without the benefit of all of the history and tradition, it would be a version of FRS or maybe CB - if that is true, we have a serious problem when industry comes knocking for more of our frequency spectrum. How do we convince the regulators that it remains an important service, if we believe that?

Of course we should keep the history of the service in mind as we decide what should define it today. That's an advantage that we have over those who created it initially - we can see what worked well, what failed, and what still works - and pick and choose accordingly. But to argue from a position of emotion, or vanity, or 'what has always been' - type historical perspectives - that's a fool's game plan.

My .02, anyway...YMMV!

1636. Element 1, Code vs. No-code, and Dad

Newsgroup: rec.radio.amateur.policy
Date: 2003-10-23 20:15:34 UTC
From: wa2si@arrl.net
Message-ID: <b7d1465c.0310231215.219a8d1d@posting.google.com>
Source record: 81112

Every one in awhile, I like to remind some here of what it is we're actually talking about. Kinda like to get the big picture out there for any potential newbies whom might be fooled into believing the "barrier" argument that characterizes the Element 1 requirement as being forced to "jump through hoops."

Step 1. Preparation requires that one listen to a training CD or tape (ARRL, W5YI, etc.) to learn the sound of two or three characters per day. There are 43 letters, numbers, punctuation marks, and Pro-signs in all that one must memorize. Approx. two 20 min. sessions per day is more than enough to be "reasonably" prepared to pass Element 1 after approx. one month. (Only have time for one 20 min. session per day? ï¿½make it two months.)

Step 2. Visit some of the websites that have sample CW QSO's. Familiarize yourself with the format of a simple CW QSO, i.e. RST, QTH, name, rig, antenna, etc.

Step 3. Just take the test. (And if, for some reason, you don't passï¿½take it again.)

Behold the much-feared behemoth:

_____ BT _R R_T 58_ 589. Q_H IS _HI_ADEL_HIA, _A. BT NA_E HR IS _OHN ES A_E IS 35 Y_RS O_D. W_ HR IS CLO_DY. RI_ IS _EN_OO_. BT AN_EN_A IS _I_OL_E.

Five minutes of very clear CW is piped into your headphones at 5-wpm, not 13-wpm, and not 20-wpm. In the example above, N0CW has missed both callsigns and pretty much a character or two from almost every word. But if s/he uses just a little common sense combined with the "few minutes" s/he's given at the end to fill in the blank, it becomes quite clear that putting together a string of 25 correct characters is actually quite easy. Particularly so because numbers, punctuation marks and pro-signs count as 2 each.

N0CW DE KN0WCW BT UR RST 589 589. QTH IS PHILADEPLPHIA, PA. BT NAME HR IS JOHN ES AGE IS 35 YERS OLD. WX HR IS CLOUDY. RIG IS KENWOOD. BT ANTENNA IS DIPOLE.

Funny thing happened the other day. My father asked me what all the hubbub was about re. the code. (Apparently, I had left my QST in the car and he decided to peruse away.) I explained that some folks consider Morse code antiquated and feel that there are better, more modern, modes in use today. I went on to include that some also feel that it's unfair to make newcomers "jump through hoops" to become ARO's, thus constituting a "barrier" to some, otherwise qualified,

potential hams.

So Dad pondered for a moment and furled his 77 yr. old eyebrows and said. "They're right, Morse code IS antiquated." My jaw dropped, "say it ain't so!" (E tu Brute?!) He then asked me about the licensing structure and I explained the three-tier system presently in place. "You've gotta keep the code test in place though." Ok, now I'm a tad confused. "Why, if it's antiquated?" I asked.

"Values, my boyï¿½values. Just ask yourself if this is what you want to teach your own children? Should they apply this logic to other aspects of their lives as they grow up? How about an aspiring Engineer, why should s/he be forced to learn history? How about an aspiring history teacher, why should s/he learn physics? There's a bunch of different analogies than can be applied, some good and some not so good, but there's one common threadï¿½values. Knowledge is NEVER wasted and "requiring" one to attain a "reasonable" level of knowledge to enjoy increased privilegesï¿½whether it be in the ARS, the workplace, or life in general is fundamental to nurturing a sense of values. Let that decay and the result will be obviousï¿½like the recent Regents exam fiasco. Don't lower the bar across the board; help raise the individual's standards. It appears to me that there already exists a no-code exam and 5-wpm seems quite reasonableï¿½so what's all the hubbub about?"

Then I remembered why I chose my callsign.

Except that it is illegal. If you will read the history of radio (not just ham radio), you will see that some degree of regulation is necessary. If people could just operate when and where they wanted, we'd be right back to the days of federal, commercial and non-commercial radio activities interfering with each other.

So if you don't want to be considered second class, quit breaking the law. Either operate the legal CB frequencies or get a ham license of the appropriate class and operate the legal ham frequencies.

If I ever get enough space I'm putting up a serious dipole or loop fed
with real ceramic-spreader open wire line. For now I gotta settle of
recycled NM and RG-8X. But when the run is only 50-60' it's not much
of an issue

I gave up on doors for tabletops about 20 years ago. Make my own out
of OSB and Masonite. Stronger and cheaper.

Shelves above and shelves below.

Of course. I always wanted one and it has done the job for well over a
decade. New Yankee frugality - it's what built this country.

Use it up
Wear it out
Make it do
Or do without.

Only thing I bought new to build the latest home machine was the CD burner (not many of those in dumpsters yet) and the modem. Got maybe $100 in it, tops. Not a power machine but I'm not doing CADD on it either.

OK, if we can "make believe" that FCC would find it in their heart to set aside all the valuable spectrum we occupy today "from scratch", then here is my suggestion for the "New Amateur Radio Rules":

97.1 To get an Amateur Radio license, you are required to pass a technical test to show that you understand how to build simple equipment which meets spectral purity specifications of (.....blah, blah, blah). You will be issued a license and callsign when you pass the test. Transmit your call sign once every 10 minutes when on the air.

97.2 Your power limit is 1.5KW to the antenna.

97.3 Here are your bands. Stay inside of them.

97.4 Your are encouraged to tinker and experiment and communicate and do public service and talk to strangers in far away lands and launch communications satellites into space and any other cool technical "radio stuff" you may think up. The government doesn't care what mode you use for any of this. (See 97.3)

97.5 Play nice. We'll try to keep the CBers out of your hair. Deliberate interference, unresolved dirty signals, or other asinine behavior on your part will cause Riley Hollingsworth to come and permanently kick your ass off the playground. Have fun.

Love always,
/signed/ FCC

Not really. That was the excuse that was used for the government to save face. They really wanted to disallow amateur activity altogether when the various radio services and regulations were initiated (see "200 Meters and Down"). It took quite a bit of organized lobbying on the part of the amateurs to maintain a place in the radio spectrum. After World War I, it took a similar lobbying effort to get the government to allow the resumption of amateur activity. They had shut it down for the war and it looked as if they intended to keep it shut down.

Yes once again it is time to fight. If all we can offer is our ability to TALK on the radio, there isn't much justification for the continuation of Amateur Radio with all the frequency privileges we have today.

> I raised this question because, frankly, the vast majority of

Although this is a good and valid point, those who don't know code and don't want to learn it have successfully outshouted the proponents of code testing so that the regulators, who know nothing of the merits of the code themselves, look like they are going to go along with it.

> too.

But sometimes they learn after the fact that although they couldn't come up with a justification to keep something, it turns out to be necessary to function efficiently and they have to reinstate it.. Although touted for decades as the wave of the future, "the paperless office" still has not become a reality. We always need paper documents for something.

> Someone has suggested that if amateur radio were invented today,

> always been' - type historical perspectives - that's a fool's game
> plan.

Eliminating skill and/or knowledge requirements should always be approached with caution and some degree of trepidation. We sometimes don't know what we need until we no longer have the ability to use that skill and/or

knowledge. Even when projecting based on past experience, foresight is far from 20/20.

Bounce him from one wall to the next? :-)

Pity about not knowing those communications radios.

The ARC-27 was, and still is, a good unit for 225-400 MHz military
comm band. It was born in Iowa at the Collins works. Tube type,
been around for a very long time.

The ARC-201 is much newer, an airborne version of the SINCGARS
family for ground support missions, fixed-wing and helos.

I shouldn't put down on-board intercom systems...those are needed.
Anyone working around a Neptune on the flight line with the APU
running knows it makes more noise than any Dill Instructor in the
United States Morse Codists. :-)

>
>Hopefully not.

Saldivar offed something like three dozen before everyone caught on.

Lots more code-tested, licensed, pretty-certificated many times
amateurs have "offed" many more from their owned-and-operated
frequencies on HF bands long before Saldivar got his first job.

Maybe Stebe is "lying in wait?" :-)

Whatever anyone says against him is labeled a "lie." Ho hum.

>He says otherwise, so we're waiting on his answer.

Ah, but there's never any proof. His standard answer is "it's in my
record" but nobody in here has seen that famous "record."
Somewhere at NARA there's a true record of his military service
and exactly what and where those famous "hostile actions" were
that he was supposedly in. Not really worth the trouble to access
the National Archives and Records Administration.

The guy who labels others a "liar" claims to have worked on lots of
military communications equipment but never mentions a single
detail about it, rationalizing his reasons as "it's all classified..."
Good grief, the only "classified" stuff is the CIA, NSA, and DISA
gadgetry. U.S. military communications equipment names,
nomenclatures, and general specifications are public information
that has been printed with real ink on real paper in lots of industry
documents anyone can read...and now on websites maintained by
the government for everything from RFQs (Requests For Quotes)
to contract awards notifications.

>confused. "Why, if it's antiquated?" I asked.

Gosh, what a heartwarming story, Egbert.

I wish I could come up with such a nine story...but my father died in 1975. He was born in 1900, the same year as my father-in-law. Father-in-law passed on in 1977, retired after a career as a polymer chemist. My Dad was not a college graduate, got most of his public schooling equivalent in the Swedish Army, was also an Army taught musician. Back in 1918 the Swedish Army still used trumpet signals in the field so he would have been a part-time "signalman." Both gentlemen were interested in technology as a pastime, my father-in-law specifically on photography, my father on time-keeping and clocks. My Dad would check the accuracy of his clock collection against WWV time signals back in the 1960s...no radio clocks for less than $30 then. Dad was much impressed by the General Radio Standard at Ramo-Wooldridge where I worked in 1960 and understood about quartz crystals and oscillators from my explanations. He was fascinated by mechanical clock movements but at the same time loved radio and broadcasts from faraway places like London during the WW2 blitz. Both genetlemen kept up to date on science and technology from periodicals. Both watched the ffirst human beings set foot on the moon in real-time television from a quarter million miles away, each at his respective living room. That was something astounding since both were born a year before the first radio signals crossed the Atlantic and three years before two bicycle mechanics made the first heavier-than-air flight.

It would be trite and cliched to say that "my Dad can beat up your dad" but I'll lay odds that either my father or my father-in-law could argue your father's points. Remember that they came from older times than your father, much more conservative in upbringing and social values, from an era when technology was just beginning to develop and an industrial revolution had just begun.

So, I'll just have to imagine what they would say, knowing enough about both to be reasonably accurate -

>"Values, my boy…values. Just ask yourself if this is what you want to
>teach your own children? Should they apply this logic to other aspects
>of their lives as they grow up?

So far, no real disagreement, by my father would probably look at my father-in-law as if to say "whatinhell is he talking about?"

>How about an aspiring Engineer, why should s/he be forced to learn history?

Why not, from a socio-economic standpoint, that is logical. But, despite thoughts common to all, the federal government does NOT specify or regulate any college or university curriculum in the USA.

>How about an aspiring history teacher, why should s/he learn physics?

My father-in-law also had a pastime of US civil war history and that whole period...AFTER getting a degree in chemistry. Again, there is no USA federal law controlling curricula in colleges or universities.

>There's a bunch of different
>analogies than can be applied, some good and some not so good, but
>there's one common thread…values. Knowledge is NEVER wasted and
>"requiring" one to attain a "reasonable" level of knowledge to enjoy
>increased privileges…whether it be in the ARS, the workplace, or life
>in general is fundamental to nurturing a sense of values.

Amateur radio is de facto a HOBBY, an avocation. It was never otherwise despite the steady propaganda of the ARS membership organizations. A "workplace" it is NOT.

>Let that
>decay and the result will be obvious…like the recent Regents exam
>fiasco.

Both of my dads would agree the above analogy is trying to make a fruit salad out of potatoes and pistachios. Wholesome ingredients but the mixture is wrong.

>Don't lower the bar across the board; help raise the
>individual's standards. It appears to me that there already exists a
>no-code exam and 5-wpm seems quite reasonable…so what's all the hubbub
>about?"

When your father was about 27 I was already assigned to Army radio station ADA, in communications all over the Pacific, and without ever

using, or having to use magnificent morse code or get into some kind
of pseudo "family values" that "must be forever a part of a Hobby."

The United States Army, like all the major U. S. military branches is
far older than radio, older than telegraphy, and is very mindful of
tradition and honor and service...rightfully so considering their history.
While all branches retain traditions, they do NOT let any of that
intefere with doing the job, getting it done by the best way they can
think of. The USN doesn't have wooden sailing vessels as warcraft,
the USAF doesn't fly spruce-wire-fabric biplanes, and the USA doesn't
use muskets or wear tri-cornered hats in battle. They all adapted to
the times, advanced, were not mired in old ways just because some
much-longer-ago old men said "they had to keep old values...
because that's the only values those old men knew."

Amateur radio isn't the military. It isn't a workplace. It isn't a guild
or craft or union or association of professionals. It's a HOBBY.
My fathers would try to point that out to your father, I'm sure, but
mine would add some harsh cuss words in Swedish if not English
(he could speak, read, and write in either quite well). I've not seen
any "Dr. Phil" program or other psemi-pseudo-pscientific group
emphasize olde-tyme ham radio or morse code as a "family values"
attribute or that it should be passed down through the ages... :-)

Change happens. It must. One must learn to separate tradiiton
from reality. Radio is still evolving 107 years after it was "born."

Okay, if your father insists that morse code testing has to stay
then I'll bet MY fathers are having a high old time guffawing at those
reasons, looking down at the adamant status quo insistence of
the still-living old-farts down here. :-)

Give my regards to Gisella. You might point out that her written
comments on the RMs would be better if she copied Kippi Speroni's
comments, not yours.

Happy status quo maintenance. Ciao.

This is a CHAT ROOM for the regulars, bound and determined
to keep everything under their control as they see fit. That includes
some AMATEUR show-biz types trying to imitate either Werner
Klemperer or Otto Preminger as Luftwaffe Obersts. Like yourself,
Herr Robust.

You seem suddenly disturbed by things and Who Is Allowed To Post!

Just contact AOL management if you are so disturbed by my postings
mein herr. Unless otherwise specified, this be an UNmoderated
newsgroup for everyone else.

If you need all that CONTROL over who can say what to whom, take
some steps yourself to make this a very private, by-invitation-only
venue with (who else?) yourself as moderator.

Go join Kellie for a group enema. Assholes belong together.

President Signs CB Enforcement Bill
NEWINGTON, CT, Nov 29, 2000--President Bill Clinton has signed legislation that permits the enforcement of certain FCC Citizens Band regulations by state and local governments. Amateur Radio operators are exempt from the provisions of the law, now PL 106-521.

Congressional lawmakers saw the measure as a way to give a voice to those experiencing radio frequency interference resulting from illegal CB radio operation. The FCC will not yield its authority to regulate Citizens Band or other radio services, however.

In short, the measure authorizes states and localities to enact laws that prohibit the use of unauthorized CB equipment--consistent with FCC regulations. This would include the use of high-power linear amplifiers or equipment that was not FCC-certificated (formerly called "type-accepted").

Specifically, the bill enables state or local regulation over the "use of Citizens Band radio equipment not authorized by the Commission" and "the unauthorized operation of Citizens Band radio equipment" between 24 and 35 MHz. FCC-licensed stations in any radio service--including the Amateur Service--are excluded from such state or local enforcement, and state or local laws enacted under this legislation must identify this exemption.

Anyone affected by the enforcement of such legislation could appeal to the FCC if they believed the state or local government had overstepped its authority under the new law. Any applicable state or local law would not preclude the FCC from enforcing regulations in a given case at the same time.

The new law also says the FCC shall "provide technical guidance to state and local governments regarding the detection and determination of violations" of any regulations localities might enact.

The bill--HR.2346 is the House version; it was S.2767 in the Senate--actually is the old Senate "Feingold bill" from several sessions ago. After introducing his original version a few years back, Wisconsin Sen Russell Feingold requested assistance from the ARRL to rewrite the measure to ensure that licensed hams could not be affected, that the bill featured a wealth of "due process" provisions, and that the concept of federal preemption over telecommunication activities wouldn't be compromised. The

bill signed by the President is nearly identical to the Feingold bill.

The bill's sponsor, Rep Vernon Ehlers of Michigan said Amateur Radio operators encouraged him to introduce the measure in the House last year. Ehlers maintained that the local hams asked him to support the bill because of the bad rap they were getting from illegal CBers using high-power linear amplifiers that resulted in TV and telephone interference while the CBers involved hid behind federal preemption.

Ehlers says that when he was contacted initially by a frustrated constituent who had been experiencing TV, radio and cordless telephone interference, he thought the problem was an isolated incident. The CBer in question was using an illegal 100-W amplifier, he said, and the FCC told his constituent that it did not have the personnel to enforce CB lawbreakers around the country. Ehlers says he introduced his bill as a result.

As did Feingold before him, Ehlers asked the ARRL to review his measure to ensure that it would not unintentionally harm Amateur Radio.

The bill was amended in the Senate, which made a specific change requested by the American Trucking Association. The final version contains language with respect to CB gear aboard a "commercial motor vehicle" (as defined in Title 49, §31101 of the US Code) requiring that state or local authorities have probable cause that the vehicle or its operator was in violation of the regulations before they attempt to enforce such a statute. On the House floor, Ehlers said truckers were "worried about perhaps being harassed by improper use of the law."

During discussion of the bill on the House floor--as reported in The Federal Register--one member spoke of "rogue operators" whose routine CB radio operation at excessive power levels left victims "helpless" to defend themselves. "When these operators boost their CB power levels, it often causes bleeding into nearby frequencies," the congressman said.

The bill passed the House under suspension in September, and passed the Senate at the end of October under unanimous consent. The measure went to President Clinton for his signature on November 14.

And since you are a clueless CBer thar your "knowledge"
of them thar 'reddio' laws is directly proportional to your
ignorance. Tan-fer thar, mercy me thar, shore thang thar,
guaran-told he thar?

As for as your dream about legalizing "freebanding" , there
are many reasons why it won't happen.

)1. Quite of those "freebands" as you ignorantly call them,
aren't even controlled by FCC; there is an agency that is
much more powerful. (Look up NTIA on the web).

2) Many of those frequencies have treaty restrictions that
the USA is bound to honor.

These are only two reasons your illegitimate activities won't be sanctioned
any time soon.

"Two Tango 214 is QRT and uh standin' by thar".
<snicker>> Only a "maroon" (Shades of Bugs Bunny) would say he was going
off the air and standing by at
the same time! ROTFFMAO!!!!!!!!!!!!!!!! (THAR!~)

(How's that for a troll post?) And for those that fall for it,
this post shows up every few months or so, therefore it is
OK to make fun of it.

Jerry

> newsgroup for everyone else.

I have no need to contact AOL. I'll simply continue to make my comments here if that meets with your approval--or even if it doesn't. I understand that the newsgroup is UNmoderated and that you are the original UNradio amateur.

> If you need all that CONTROL over who can say what to whom, take
> some steps yourself to make this a very private, by-invitation-only

You might want to devote one of your long-winded efforts to an explanation of how I'm attempting to control who says what by commenting on your posts. I'm certain that it'll be read by tens of people.

When you issue snide comments to the postings of others, are you attempting to control who says what to whom?

> Go join Kellie for a group enema. Assholes belong together.

I'm sure that both of yours take comfort in your belief, affable codger.

While nice propaganda, it's somewhat foolish to believe that, Brian. To do what you say, the guy would have had to avoid detection by Soviet, American, and NATO, radar installations, which is clearly not very likely. Using normal operating procedures, civilian radar installations would have contacted NATO within moments of him flying off his approved flight path. NATO, American, and Soviet, radar facilities would have detected his plane as it approached the restricted airspace bordering East and West Germany. NATO would have immediately tried to contact the pilot and aircraft would have been dispatched in an attempt to intercept him before he could leave NATO airspace (can't have spies flying out of West Germany). At the same time, to avoid any possibility of confusion and again using normal operating procedures, NATO would have immediately contacted the Soviets to assure them it was not a NATO controlled aircraft flying into their airspace and to explain their unusual air activity so near the border. If the Soviets had not already detected the plane and sent aircraft to intercept, they certainly would have after being contacted by NATO. The Soviets, for whatever reason, did not shoot down that plane. Whatever the reasons, it was certainly not because he had penetrated Soviet air defenses undetected.

>they intended to keep it shut down.

Exactly, Dee. And it didn't stop there - amateurs had to fight for recognition internationally as well, all through the 1920s. Amateur radio was only recognized as a separate radio service by international regulations in 1927.

The whole concept of "radio for its own sake" evolved over time, and as K0HB so rightly says, is still evolving. What it evolves into is mostly in the hands of those who choose to become radio amateurs.

Note that the regulations did not contain any sort of "Basis and Purpose" statements until 1951, when FCC insisted on writing such into the regs for each service.
>
>> The ARS is certainly not a service born of regulations - but it exists

I am convinced that all the regulators really care about wrt amateur radio is:

- Noninterference with other services
- Orderly on-air behavior by amateurs
- Reasonable level of use of allocated spectrum

Everything else is pretty much up to us.

>> It was put there by regulation for a reason - and it needs a reason to

>> OK, good point - maybe it should.

But CW *doesn't* have any *exclusive* band assignments on HF/MF! Not one Hz!

There are lots of reasons to keep CW/Morse testing - and lots of reasons to let
it go. All reasons basically come down to someone's opinion, one way or the
other.

>Although this is a good and valid point, those who don't know code and don't

>function efficiently and they have to reinstate it.. Although touted for
>decades as the wave of the future, "the paperless office" still has not
>become a reality. We always need paper documents for something.

Excellent example. Offices today use more paper, not less!

Note that most of the concepts of the computerized office (mouse, graphical
user interface, computer at every desk, networking) came from Xerox's Palo Alto
Research Center (PARC) in the very early 1970s. The folks at Xerox thought
their core business of copiers would wither away as computers took over.....

Often when something is done a certain way, it's not just because "we've always
done it like that" but because of very good reasons that are not immediately
apparent to outsiders - or even insiders.
>

>from 20/20.
>
It's also important to monitor the actual results of changes. For example, back
in April of 2000, code testing was reduced to a single 5 wpm test *and* the
written tests were reduced. Did we get lots more new hams? Nope - in 3-1/2
years, the ARS in the USA has grown by less than 10,000. What we did get was

lots of upgrades by already-licensed hams in the year or so following the rules changes, then a slowdown to nearly the rates before the changes.

Which means that the methods and standards of the military, the workplace, the guild/craft/union or professional associations don't apply to amateur radio.

> It's a HOBBY.

It's an avocation. Meaning it's done for its own sake.

But however someone chooses to describe it, does the fact that amateur radio isn't the military, a workplace, a guild or craft or union or association of professionals mean that there is no need for amateur radio to have values, and standards? That seems to be your main message here.

You seem to be telling us that amateurs should not have any values, standards or practices except those necessary to prevent amateurs from interfering with users of other radio services. And you denigrate and insult anyone who disagrees with you.

We've seen *your* values, standards and practices in action here, Len. They leave a lot to be desired.

I've never dug into the details of who did or did not do exactly what
during that stunt but whatever actually happened is recorded recent
history which is inarguable. Versus you making the bunch of
suppositions and assumptions above instead presenting any historical
facts which refute my comments. That simply does not fly.

If in fact NATO and the Soviets were so chummy and the Soviets knew
the kid was enroute then you explain why the Kremlin very publically
punished a flock of their high-level air defense officers for not
detecting and shooting the kid down.

I may have proposed this once (quite tongue in cheek) but one of the
proposals was that the prospective amateur sign a paper stating how he
or she had read and understood part 97. Why not extrapolate that to the
whole test? Just think how easy the testing process would be! By gosh,
we could get [people to sign that they had the equivalent knowlege of
anything. The ARS could be populated by geniuses!

Dick,

A simple straightforward challenge for you (and the rest of rrap).

During the 30 hours starting at 2100Z on Nov 1st, 2003 I will be
practicing Morsodism on the HF bands in the ARRL SS Radiosport event.
Keep up with me if you can.

May the Peace of St. Morse shower down upon thee in abundance,

de Hans, K0HB

>
>> It's a HOBBY.
>
>It's an avocation. Meaning it's done for its own sake.

In common English an avocation is a hobby.

Hobbies aren't required to be so anal retentive about RULES and
REGULATIONS rigidly enforced by participants who greatly
desire CONTROL over directions of activities.

YOU aren't the regulatory body controlling amateur radio or
much else. The FCC is that body.

The FCC doesn't require any commissioners or staff to be
proficient in morse code in order to regulate US amateur
radio...yet you INSIST that YOU must enforce, guide, direct,
and ORDER what takes place in amateur radio.

>But however someone chooses to describe it, does the fact that amateur radio
>isn't the military, a workplace, a guild or craft or union or association of
>professionals mean that there is no need for amateur radio to have values, and
>standards? That seems to be your main message here.

I cannot help you on your misunderstandings or failure to
read what is written.

The FCC regulates, NOT the "amateur radio community."

YOU keep wanting all the rules and regulations according to
YOUR standards and practices...which are amazingly like
the direction and guidance and near-commands issued from
ARRL.

NO ONE in amateur radio is required to follow your dictates.

NO ONE outside of amateur radio is required to follow your
dictates, "explanations," or arrogant presumptions of expertise
to do as you insist.

NO ONE is required to follow rigid regulations, standards,
practices AS IF IT WERE a union, guild, craft or workplace
organization.

>You seem to be telling us that amateurs should not have any values, standards
>or practices except those necessary to prevent amateurs from interfering with
>users of other radio services.

Absolutely. "Here are your bands, have a nice day" would be
a very free, open, and enjoyable environment for a HOBBY...
except for a certain group who wish to play-act, fantasize that
they are some sort of "professionals" in communications...or
even experts at modern radio operations.

>And you denigrate and insult anyone who
>disagrees with you.

Tsk, tsk, tsk...YOU cannot take an opposite viewpoint so you
once again resort to that trite phrase of "being insulted."

Poor baby.

Do you wish honors and respect for trying to hold a hobby
activity entry to the standards and practices of 70 years
ago? If so, you are not really living in this reality.

If you take that as a "denigration and insult" then I could
care less. Those who oppose freedom for a hobby activity,
require anal retentive regulations for same, or with to live in
some fantasyland where they are "leaders of technology
and expertise" are not worthy of honor or respect, just
contempt from the rest of the radio world.

>We've seen *your* values, standards and practices in action here, Len. They
>leave a lot to be desired.

Poor baby. FREEDOM FROM OPPRESSION is a "bad"
standard and practice, is it?

You don't have your whig on straight.

If you so adamantly oppose change and demand all shall
adhere rigidly to your own personal viewpoints, then the FCC
will accept a petition from you to forever hold the US amateur
radio service to long-ago standards and practices, especially
to love, honor, and obey morse code as the epitome of radio.

I suggest you also demand a change of the name to:

Archaic Radiotelegraphy Service

Make it a living museum of the airwaves, the last resting place of once-mighty morsemanship. Restore the titles of nobility on the worthy worshippers of King Kode, the gallant knights of the brass. Make all bow before your blue-blooded beeping highnesses. Oppose all opposition, demand rigid adherence to the royal roiling righteous round-tables of dits and dahs.

Most important of all: Make morse a FAMILY VALUES attribute, to be passed from father to son, ad infinitum.

The rest of the world will treat you kindly in your delusions. Your avocation is only a hobby, condescendingly tolerated by the far more numerous in other radio who live in reality.

The Jukes family descendants would be proud...

LHA

>schedule, word it a little more formally, and write a petition to go with
>it. I'll support it.

Sounds to me like the "comic book rules" (disguised as "plain language rules") that the scholars and wonders at the then-new Consumer Affairs Task Force of the FCC tried to institute in 1976 after their spectacular victory in rewriting Part 95 Subpart D (the CB Rules) in the same "lowest common denominator" (also known as "Illiteracy for Dummies") style. They tried running it up the flagpole and it was resoundingly shot down by both the professional regulators and the knowledgeable amateur community.

The head of that operation - who up to that time had no idea of what and how the FCC was supposed to do for a living, much like the recent crop of appointees and promotees - then tried coming out to our field office and telling us how we were doing everything all wrong. In return, we requested that our Bureau Chief do all he could to ensure that those fools stayed out of our face and off our property in the future. The person running that operation got the same message from wherever she visited, and soon left the agency.

"Those who will not learn from history will be doomed to repeat it...."

Very interesting - I haven't read "200 Meters and Down" - I'll look
for a copy.

However, the regulatory agencies likely see the "trained pool of
operators and experimenters" as the original benchmark for the
service. What I was hoping to stimulate in this thread was some
thought regarding what the goals of the service are relevant to today,
and then use that as a guide to what qualifications and testing are
relevant to meet those goals.

Somehow, it's not working out quite that way.... ;)

That was one of the points that I was hoping to raise in this
discussion. If it is a pure hobby, it is difficult to justify a lot
of testing and qualification levels. If, however, it is to train
folks to provide 'para-professional' backup to Emergency services,
then the standards would be considerably higher, and qualifications
more easily justifiable.

Seems to be the direction that other administrations around the globe
have gone - and there is indeed a strong push in North America to
usher it out as well. Personally, I have yet to hear an arguement
that would convince me that code testing should remain a mandatory
requirement. I was hoping that someone would come up with a solid
technical or functional reason that would leadd me to believe
otherwise - but there doesn't seem to be one.

Although it is a valuable mode of operation, especialy in high QRM or
QRN situations, (and fun to use!!), it was only a mandatory requirment
originally (as I understand it, anyway) so that government (and
commercial?) CW stations could communicate with amateurs interfering
with their signals, and order them to stop. A secondary purpose may
have been to allow emergency CW traffic to be relayed by amateur
stations. These scenarios are no longer viable reasons in 2003 -

unless there are new reasons to take their place, then perhaps CW
should assume the same status as the other available operating modes -
permitted for use, by all means, but not specifically tested by
practical examination.

My own personal position on this subject has shifted solidly over to
the "yes, discontinue mandatory CW testing" side, in the absence of a
logical reason to believe otherwise. I cannot recall a single
arguement based on hard fact that justifies testing as a necessary
requirement to becoming a licenced amateur, and operating on HF.
There is emotion, and preference, and nostalgia, and tradition, and
fear of the loss of a valuable skill whose value is no longer
quantifiable - but no hard reasons.

Years ago, here in Canada, there was a special licence class required
to operate using the Digital modes (!). This was dropped after only a
few years. presumably because it was not demonstrated that there was
any real benefit gained from the additional testing of digital
proficiency. After all, the idea of a hobby is to be able to
experiment and learn those aspects that are of interest or use to the
individual!

>become a reality. We always need paper documents for something.

True - errors are certainly possible when re-engineering any complex
process. In fact, the only guaranteed way to avoid error is do do
nothing at all. But, to continue along without occasional review and
adjustment can have much more serious consequences. For example, if
Polaroid had not continually re-invented their processes over the
years, they would still be trying to market their old 'instant
picture' camera and film technology - which would be virtually
unmarketable today, in an era of digital cameras and home photo

printing technology. Those out of sync with progress do not survive.

Our hobby is technologically based, too. By virtue of the fact that it is a hobby, though, there is no need to retire older technology in favour of the leading edge stuff (in fact, some hobbies exist because they are the only place left to find people who share their interest in the obsolete - Antique Radios, or Steam Trains for example). Why, however, would we realistically expect newcomers to the hobby to be forced to learn specific 'niche' areas of this, or any other avocation? If there is a real need to do so, then OK - make it a requirement. But, if there isn't - why do it? "Because that's the way it has always been" is not a reason to do, there must be a specific benefit to keeping it, or specific hazard if it is discontinued - complacency won't do the job. We test regulatory knowledge, because the operator must know the legal limits within which the station must be operated. We test radio knowledge, because operators should know enough about how the equipment functions to ensure that they operate it correctly, and stay within the legal limits. And the FCC, IC and other worldwide regulatory authorities tested CW proficiency because it was an ITU requirement for all amateurs to be proficient in the sending and receiving of CW when operating on the bands under 30 MHz. Solid reasons for each - reasons that can change as the world evolves. Without the support of the underlying reason,

>

>numbers that cannot be found in any other radio service.

Exactly - but if we show them that what we're really interested in is protecting the class structure, hierarchy and outdated traditions of what is essentially a hobby, we're not going to convince anyone.

I believe that we need to position ourselves as forward-thinking, technically competent and highly motivated - ready to out our skills to use whenever required to do so by the various public safety and security organizations. Looking through the current FCC petitions regarding the infamous Code issue, we could easily be seen as a bunch of folks interested in creating unnecessary levels of proficiency testing within the hobby, without a real technological reason to do so. That will not help us, or our image, one bit.

>from 20/20.

Agreed - but to remain credible, we need to be careful that we don't overstate the real importance of, and the perpetuation of testing of, skills that are (outside the hobby itself) obsolete and no longer in common use. Unless we can come up with some real, tangible, meassurable benefits of doing so.

Otherwise, it's simply a matter of personal preference!

Hans,

I believe that you have missed my point a little bit (!) - it wasn't to start up a redefinition of the entire hobby all over again, but to stimulate an introspective look at the validity of the various arguements ongoing in this group (code / no code, more testing / less testing, etc.) based on the world as it stands in 2003. Things that made perfect sense in 1919, or 1941, or 1963 may well be seriously outdated today, based on the current state of our hobby. Example - In 1930, hams had to build just about all of their own equipment, so testing them on their ability to hand-draw and analyse radio schematics made good sense. Otherwise, the bands would be full of splatter and heterodynes from poorly-crafted transmitters. Now, where just about everyone is using commercially built transmitting equipment, that level of detail is no longer of critical importance, and is no longer tested. To propose that today would be quite difficult to justify - most folks never even take the cover off their radios anymore, let alone design one from scratch.....

My point is, if we argue from preference or personal bias, we tend to hold on to things because they are familiar, or comfortable, or just "the way it's always been". To review using an analytical mindset might just bring out the true value of some aspects of the hobby - sure, there are traditions that should be kept (everyone on SSB uses Q-signals in comon speech, even though they were only designed for brevity when using Morse code) - it is a quaint link to the past.

Others, like mandatory CW testing, should be able to stand on their own merit based on solid reasoning - after all, we are forcing people to learn it to get in to the hobby (me included - the current price of admission to HF...) - so there should be a good technical or procedural reason to do so. This ain't the Masons....<:0)

Your rule set is actually a good one - simple, and to the point. If only people could work within straightforward frameworks like this - the regulators would be out of business.....

More than this, his assumption that the rest of it relies on, that
Rust flew directly and non-stop over the East/West German border to
Moscow (what's that, more than 1500 miles?) in a Cessna 172, seems
a bit silly.

Rust actually entered the Soviet Union after a stop in Helsinki, which
means he crossed into the air space either from the Gulf of Finland
or the Finnish land border, so NATO had nothing to do with it. As for
why the Soviet border defenses didn't pick him up, Rust himself believes
it may be because the day he flew (May 28?) happened to be a holiday for
the Soviet military, and this may have left their defenses where he entered
undermanned and/or inattentive.

Heck, the "average" sixth grader in some American neighborhoods is quite different from his/her "average" counterpart elsewhere.

Perhaps a better way to word that idea is "the entry level syllabus and test should not require a knowledge of math, science or English above the sixth-grade level in order to understand the material".

I had to read that part of the KL7CC paper twice because I didn't believe it
the first time! And they're talking about the *rules and regs*!!

Once upon a time, FCC tried that approach with another radio service. Didn't
work very well.

>Why not extrapolate that to the
>whole test? Just think how easy the testing process would be! By gosh,
>we could get [people to sign that they had the equivalent knowlege of
>anything. The ARS could be populated by geniuses!

Exactly! No more need for VEC sessions and all that paperwork. If that approach
is valid for the rules, why not the whole test?

But the part of that paper I found most "amusing" was where the prime author
admitted that he could not pass the current written test for the license he

holds. It is written in such a way that he almost sounds proud of that fact. As dear departed N0BK would say: Surreal.

Boy, that's really misleading (though I assume unintentionally). You ask
a rhetorical question about "new hams", but then quote a number (10,000)
which is something else.

In the 41 months since restructuring, about 70,000 new hams have been
licensed. That's an average of 1670 new hams per month. About 10% of
current ARS licensees obtained their license since the April 2000
restructuring.

For comparison, in the 34 months prior to restructuring about 48,000 new
hams were licensed in the ARS. That's an average of about 1410 new hams
per month.

It seems, then, that the rate at which new hams entered the ARS increased
by about 20% after restructuring, and that this increase was sustained for
at least 39 of those 41 months (the last couple of months are suspicious).
Is a 20% increase in the number of new hams due to restructuring not "a lot",
and if not then how much would it have had to increase to be "a lot" in
your view?

You mean since July? If so, recall that a new Tech Q&A pool was put in place July 15. The new pool is quite a bit larger than the old one. This dropoff is significant because the numbers since July are not just down, they're way down - below what they were before restructuring. Some have suggested that WRC 2003 may be a factor, but that seems unlikely to me because the class most affected is the Tech, which has no code test anyway.

>Is a 20% increase in the number of new hams due to restructuring not "a lot",
>and if not then how much would it have had to increase to be "a lot" in
>your view?

My math says an 18% increase but close enough. You have a good point, Dennis - how much of an increase is significant? I'd say that 18% is significant but not "a lot". 50% increase (average of 2115 per month) I would call "a lot". Just my opinion.

Note that besides the elimination of the 13 and 20 wpm code tests, the restructuring significantly reduced the written exams:

Extra went from 5 exams totalling 190 questions to 3 exams totalling 120 questions
General went from 3 exams totalling 100 questions to 2 exams totalling 70 questions
Tech went from 2 exams totalling 65 questions to a single 35 question exam

How much each of these factors affected the number of new hams is anyone's guess. Personally, I thought that we'd have much more growth in the past 3 years - I even predicted that we'd be over 700,000 before the end of the last century. Didn't happen!

One more factor: In early 2001, the first of the Technician licenses that did not require a code test began to reach the end of their terms.

Those suppositions and assumptions are based on the fact that the airspace in question (Europe, Eastern Europe, and Eastern Russia) was monitored by some of the most sophisticated radar facilities in the world - radar facilities belonging to the United States, NATO, and the Soviet Union. To avoid mistakes, communications between those three were commonplace whenever an unexplained incident occurred. To do what you say, this person would have had to avoid detection by all three, which I believe was absolutely impossible. Instead, like many military situations of the time, I suspect a lot happened behind the scenes that was never, and may never be, made known to the general public. Of course, that's just what I believe. You're free to believe what you want.

His flight started in Hamburg Germany, with a stop in Helsinki for fuel. According to every report I've read, he crossed into East Germany on the border with West Germany. To do this without detection, he would have had to avoid United States, NATO, and Soviet radar. In my opinion, that was impossible. Therefore, there is more to this story that has not been told.

Yeah, right. It's a "secret". Do you really think that this "scam" you
propose included the sacrificial canning of Soviet Generals to cover
the real truth? Makes no sense at all.

I have enough stick, pedal and hanger bum time to know that if you
plan your flight properly and keep your head down while flying a light
A/C the chances of detection by ground-based radar are quite low if
you know what you're doing.
Ask the drug dealers who have flown DC-6s into this country undetected
how they did it. You can bet yer bippy that the kid was not flying at
10,000 AGL with his transponder squawking his S/N, yes?

In typical Russian fashion, Gobachov used the incident to eliminate a few Soviet officers he didn't like (officers appointed by his predecessor). Besides, if you're going to use this to support your position, you should also point out that the official reason they were fired was for not taking more aggressive action against the intruder, not for a failure to detect the intruder. Of course, I'm sure you see that as just propaganda, while anything that fits your version of the story is not.

That area (Eastern Europe and Western Russia) was perhaps the most heavily monitored region of the world at the time, by tactical and strategic radar, surveillance aircraft, and satellite. The Gulf/Mexico region is not nearly as well monitored (something the military and drug enforcement personnel has repeatedly complained about). I seriously doubt anything larger than an insect could have flown over Eastern Europe or Western Russia at the time without being spotted. However, if you choose to believe otherwise, that is certainly your right. Therefore, I will not continue to argue a contrary position. Take care.

Actually, the Civil War wasn't about slavery, but I'll avoid an unnecessary repetition of those facts. I'll instead point out that the majority of blacks in this country today are not decendents of American slaves - they, or their ancestors, entered this country in the 150 or so years after slavery was abolished (the majority of those within the last twenty years). Therefore, if you have a complaint, perhaps you should focus on those members of recent administrations who helped ease immigration requirements, not on something that happened many decades ago. Both political parties are responsible - the Democrats want voters and the Republicans want cheap labor for big business.

That's one way to look at it. OTOH, in 1930 there *were* problems with
transmitters splattering, chirping, clicking and buzzing all over the bands,
and getting outside the band as well. So it could be argued that the tests were
there to try to cure a problem as well.

>Now, where
>just about everyone is using commercially built transmitting
>equipment, that level of detail is no longer of critical importance,
>and is no longer tested.

Drawing schematics as part of the test (in the USA) was removed at least 40
years ago, when FCC went to 100% multiple choice. (1960 or 1961, for amateur
tests up to at least General, which had all privileges at the time.)

>To propose that today would be quite
>difficult to justify - most folks never even take the cover off their
>radios anymore, let alone design one from scratch.....

But some of us (ahem) *do* design them and build them from scratch. Amateur
radio is probably the only radio service where a licensee can simply assemble a
transmitter and put it on the air without any formal type-acceptance, approval
or certification - at least here in the lower 50 provinces.
>

>My point is, if we argue from preference or personal bias, we tend to

>procedural reason to do so. This ain't the Masons....<:0)

Sure - but what constitutes solid reasoning varies from person to person. I think that the simple fact that hundreds of thousands of hams all over the world use Morse on the HF ham bands is a solid reason to require at least a test for skill in the mode at a very basic level - say, 5 wpm. Others disagree.

I also want to announce a new net. It will be on 27.885. It will be for digital modes. Recommend using 7 bit baudot, inverted.

I always wondered- What authority "issues" these fake callsigns?
Is it just some guy promoting a "club" so he can bilk the
foolish out of "membership dues" by issuing them callsigns?
If so, I'd like to start one; I could use the money.
Maybe it'll be the "FI" series call signs (friggin idiots).

The call signs are legal and are issued by
Alfa-Tango International under authority of ITU.

You should really make an effort to be less hostile to
people who have interests other than your own
narrow minded views.

Got news for you twit, the FCC is the only authority that can issue
calls signs for stations in the U.S., and your on operations 27.885 are
in violation of FCC rules since you hold no valid license for those
frequencies and those frequencies are not within the current cb allocations.

In article <b7d1465c.0310231215.219a8d1d@posting.google.com>, wa2si@arrl.net (Bert Craig) writes:

(snip of excellent description of the 5 wpm code test)

Here's another way for those unfamiliar with Morse to look at it:

Imagine a test where the person being tested has to listen to a series of words spoken at a slow rate (one word every 2.4 seconds) and write down the the first letter of the word spoken. The same word is used for each occurrence of a particular letter. So a person being tested would hear something like "Table....History...Imagination....Salamander........Imagination...Salaman
der......Nexus...Oval...Table
.......History.....America......Raster.....Dominion......(etc.)

and when the letters were written down, a simple message would be spelled out. Person being tested could go back and make corrections, too.

That's all the Morse test is - except that instead of words, there are series of short and long tones.

>
>Funny thing happened the other day. My father asked me what all the

You can bet they'll try!

>How about an aspiring Engineer, why
>should s/he be forced to learn history? How about an aspiring history
>teacher, why should s/he learn physics?

(irony mode=ON)

And this can be applied at any age level. Consider how, in this age of give-away calculators, young children are forced by law to learn addition, subtraction, multiplication and division tables. Why? When arithmetic had to be done by hand, perhaps there was a case for it, but now we have methods that are faster, easier, less error-prone, etc. If a kid wants to learn how to do long division, fine, but why must arithmetic methods that go back to the ancient Greeks be required of all children? Because "we've always done it that way"? Or "I had to do it, so you do, too"? Heck, professionals don't rely on manual calculations for anything important.

(irony mode=OFF)

That makes sense - a cause - and - effect relationship is very
possible as well. Strong justification for adding requirements to a
licence test - solving real-time problems. The success of the
additional tests can be measured by the impact on the issue.

They hung on through the mid 60s up here, according to an old licence
manual that I found recently. My point was, though, that rules like
this made sense at one time in the history of the hobby, but later on
(by the 60s, in this example) they were outdated, and retired.

Here too - and that is one of the attractions for me, to be able to
try out just about anything on-the-air - experimentation at its best.
(no from-scratch projects yet - just a rebuild of an old Heathkit TX
from the 60s, and a few old military transceivers - I have a WS-19
almost ready to go!) I envy the guys who can build TX equipment from
scratch - my theory is not quite that current - yet.

The only difference up here is that building or repairing amateur
transmitting equipment is restricted to those holding the Advanced
licence (the higher of the two that we currently have). Basic licence
holders must operate commercially built transmitters designed
specifically for use on the amateur bands. The intent id to ensure
that those building or repairing TX equipment have sufficient
theoretical radio knowledge to do it right (theoretically, of course!)
and produce equipment that does not interfere with other users or
transmit out-of-band signals.

>

I don't think that I would agree that this would be a reason for
testing CW competence - more of a solid reason for keeping CW alive as
an approved mode on the bands. I tend to view making something a
mandatory requirement in order to correct a problem, or ensure
competency to prevent a problem. If CW was not a mandatory
requirement, would people still take the time to learn it? I believe
that they would - those who are interested enough to use it anyway.

OK twit (I stand by the lable), you want to make a bet you don't hold a
license to transmit on 27.885? And if you brush up on your reading
comprehension skills and re-read my post, you will notice I stated that
"the FCC is the only authority that can issue calls signs for stations
in the U.S." Notice I said "U.S.", that is "United States" in case you
don't understand. Now where did I say anything about outside of

sovereign territory? And here you are on a ham newsgroup inviting others to get one of these 'phoney' callsigns and operate on a frequency with this 'phoney' callsign that carries no authority whatsoever to operate on that frequency. And your ITU has no authority to issue these licenses to operate on those frequencies for any U.S. ham or anyone else.

After reviewing the info on the Alfa Tango website, it appears that it is just a radio club based in Italy. As such it obviously has no authority whatsoever to issue any type of operating licence or callsign, not in Italy where the Ministero delle Comunicazioni has the corner on that market :) , or anywhere else on this planet.

I suspect that the 'USXXXX' designators refer to individual member ID numbers. Of course, each member would require licencing by their respective regulatory agency in their home country before operating on the air. That would be like joining AAA, and claiming that their membership card is equivalent to a drivers licence....duh.

There may be the odd individual (!) who believes that membership in the club has provided them with a legitimate radio licence - if so, I'd strongly recommend that they go and discover the truth before they risk getting busted for illegal operation.

OTOH, if there's a lucrative market out there for radio callsigns, I've got dibs on the November Fox Golf XXX number series..... ;)

Go for it, Ace. Tell us all how it was... :-)

This going to be another one of those "bear shooting for naval intelligence" things?

Of course you carry a radar receiver in your ultra-light and can TELL whenever you are swept by a radar beam... :-)

Oh, and by the way, this sort of thing isn't close to amateur radio policy, is it? :-)

Subpart D of 95 was rewritten to its present form way back in '76?

Gosh, that's 27 years ago!

Nobody tried to change it back to lawyerspeak since then?

:-)

>(snip of excellent description of the 5 wpm code test)
>
>Here's another way for those unfamiliar with Morse to look at it:

Hundreds of thousands have "looked at morse" over the years,
shrugged their shoulders, and dismissed it.

Professional communications services don't use it because it
was never considered for their service to begin with, or other
services that did use it have either stopped using it altogether
or relegate it to the back room.

There's not even any landline telegraphy used in the USA and
the Morse-Vail telegraph system debuted here (Baltimore to
Washington, D.C.) in 1844.

SOME radio amateurs are still infatuated with it...but over two
hundred thousand US amateurs got into US amateur radio without
taking any code test whatsoever...in just a dozen years.

You like "Slow English?" Check with the Voice of America, maybe
they still have a few broadcasts with it.

Want to send a 100-word message with morse code at 20 WPM?
That will take 5 minutes to complete. An ancient Apple][with a
2400 baud modem can do that in less than a couple seconds.

>>So Dad pondered for a moment and furled his 77 yr. old eyebrows and

>
>You can bet they'll try!

Try what? Hold back progress?

Let's bring on Family Values of proper horsemanship, get rid of those stinky, polluting automobiles. [and create a methane pollution no one can imagine!]

Let's bring on Family Values of doing away with power tools to build things or appliances to prepare and cook food. Get down to Basic Values of physically working hard very long hours using only hand tools. Let's have the cooks and womenfolk slave away in the kitchen and bakery for most of the day to restore Family Values!

Let's get rid of all those damn aeroplanes that kill so many people. On December 17 this year there's a centennial on heavier-than-air flight. "If man was meant to fly, God would have given him wings!" FAMILY VALUES. Old things. Walk, don't run. Stay on the ground.

The Amish have the right idea, you think? FORBID the NEW.

>"I had to do it, so you do, too"? Heck, professionals don't rely on manual
>calculations for anything important.

Professionals in communications have STOPPED using morse code for anything important to be sent.

OH, yes...your idea of Family Values in amateur radio is to love, honor, cherish morse code. Just because you had to do it to get that much prized extra license.

Your idea of Family Values is to act the petty little dictator by arrogant superiority of Knowing What Is Best For All Amateurs!

Tradition. Family Values. Hold back progress. Forbid the new.

Emphasize the MODE, not the communication. That's a Family Value?

Family? That's more like the Jukes family...

Try not to strain yourself putting words into others' messages.

Don't get all passionate about your piquish puerile parsonage.

You were much better on the pulpit with your old Sermons On
The Antenna Mount.

I'm not at all interested in joining the Archaic Radiotelegraphy
Service.

Tens of thousands of radio people feel exactly the same way.

What did YOU do back in 1958 when U. S. Class D Citizens
Band was created?

NO test whatsoever back then, but licensed it was.

YOU've had 45 years to correct things. Doesn't appear that
YOU did anydamnthing except snap your suspenders and

look down at others from a safe distance.

Go back to Electric Radio and console yourself with state of the art of antique radio and "designing your own gear" by building kits.

I believe requirements for immigration and naturalization should be extremely rigid, involving extensive background checks and a requirement that the person immigrating have the means in place to make his/her own living. Eligibility for state or federal "welfare" benefits should also be severely limited. I'd also do away with the law that states that any person born in the U.S. is automatically a U.S. citizen, if the parents, at the time, are *not* U.S. citizens themselves. The children born to non-citizens would be considered to be citizens of the parents' own country of origin. Also, no person who is not a U.S. citizen, by birth or legal naturalization, should be allowed to vote in any local, state, or federal election. Liberal immigration and naturalization policies amount to political corruption in it's most dangerous form -- and the danger is to U.S. sovreignty.

>Dan/W4NTI

Dan:

I see. Well, I guess name-calling, as usual, takes the place of reasoned
argument here on rrap. Why am I "stupid?" What did I say that wasn't
true? If the Civil War wasn't about racism and slavery, then why, in it's
aftermath, did one of the most famous Confederate Generals, Nathan
Bedford Forrest, organize the Ku Klux Klan? Oh, yeah, it was all about
doing battle against all those nasty 'ole Yankee Carpetbaggers. Right.
Which is why they took their frustrations out on black slaves.

The South has a lot to answer for, IMHO. Modern-day Rebels with the
Confederate flags on their pickup trucks don't do much to heal the wounds
of the past. They all need to be rounded up and "deprogrammed."

Amateur Radio Newsline™ Report 1367 – October 24 2003

Amateur Radio Newsline report number 1367 with a release date of Friday, October 24th 2003 to follow in 5-4-3-2-1. The following is a Q-S-T. The FCC begins preparing for the 2007 World Radiocommunications Conference, a new all ham crew arrives at the I-S-S and a ham a is charged with violating airport security. Find out the details on Amateur Radio Newsline report number 1367 coming your way right now.

(Billboard Cart Here)

**

RADIO LAW: FCC COMMITTEE TO GET READY FOR WRC-07

The ink has yet to complely dry on the agreements reached ar WRC-03 as the FCC begins getting ready for the next World Radiocommunication Conference in 2007. As part of the preparations FCC Chairman Michael Powell has announced the appointment of Nancy Victory as Chair, and Peter Hadinger as Vice-Chair of the agency’s WRC-07 Advisory Committee. Amateur Radio Newsline’s Bruce Tennant, K6PZW, is here with has some background on each of the appointees:

--

Nancy Victory is the former Assistant Secretary of Commerce for Communications and Information and the former Administrator of the National Telecommunications and Information Administration. Prior to her appointment to the Department of Commerce, Ms. Victory was a partner in the Washington law firm of Wiley, Rein and Fielding, where she focused on legal and regulatory issues faced by communications companies.

Peter Hadinger is Director of Communications Initiatives for Northrop Grumman’s Space Technology Sector. Mr. Hadinger has taken industry leadership roles on global satellite issues, including privatization, protection and spectrum allocation. He is past Chairman of the Satellite Industry Association and current vice- chair of the Satellite Task Force in the President’s National Security Telecommunications Advisory Committee.

Also getting an appointment is Alex Roytblat who is Assistant Chief of the Strategic Analysis and Negotiations Division of the FCC’s International Bureau. He will direct the Commission's WRC- 07 preparatory activities and serve as the Designated Federal Official to the Advisory Committee. Roytblat directed the Commission’s preparatory activities for last June’s 2003 World Radiocommunication Conference held in Geneva.

For the Amateur Radio Newsline, I’m Bruce Tennant, K6PZW, reporting.

--

The Advisory Committee will be tasked with providing advice and technical analyses of the nations telecommunications needs. It will also make specific recommendations on matters relating to that conference. (FCC Release)

**

TALKING ON THE AIR: BIG SUNSPOT ACTIVITY MAY HAMPER YOUR QSO'S

If you are wondering why you may not be able to make contact on your favorite band, the answer is right out there in space. According to propagation reports from the Space Environment Center, a solar storm, centered around Sunspot number 484, has grown into the biggest in recorded history. And a solar storm with a sunspot that size can easily impact on radio propagation here on Earth.

Sunspot 484 is reportedly about the size of the planet Jupiter, and forecasters say that another big sunspot could soon appear near the sun's southeastern limb. The active region is not yet directly visible, but the Solar and Heliospheric Observatory satellite has seen material being blasted over the sun's limb from the approaching spot. Major eruptions are possible from these active regions as they rotate across the face of the sun over the next two weeks.

Also this word of caution. Never, never look directly at the sun. While these sunspots are easy to see its also very dangerous to try. Unprotected eyes can suffer severe and perminant damage from looking directly at the sun. Instead, as we have said before, visit www.spaceweather.com for safe solar observing tips. (ASWLC)

**

RADIO POLITICS: NOAA SPACE WEATHER SERVICE THREATENED

Solar propagation reports like this one could soon disappear. CQ Magazine's news service reports that the service on which many amateurs depend for reports on ionospheric conditions may have its funding sharply cut or eliminated under two versions of a Congressional spending plan for Fiscal Year 2004.

The Space Environment Center, part of the Commerce Department's National Oceanic and Atmospheric Administration, provides space weather reports on solar and geomagnetic activity that affect the ionosphere, which in turn affects radio propagation. In addition, the bureau monitors solar flares and similar events that can damage satellites. This gives advance knowledge that can help protect them. And for radio amateurs, the propagation predictions in C-Q and other publications depend on these space weather observations.

The Space Environment Center is actually operated jointly by NOAA and the Air Force, but its funding is in the NOAA budget. It suffered a 40% budget cut in the current fiscal year. The House budget proposal for 2004 calls for an additional 40% cut. But the nail that could close the coffin lid is in the Senate. That version of the bill cuts funding for the Space Environment Center altogether. The Senate says that such activities are rightly the domain of the National Aeronautics and Space Administration and the Air Force.

According to an e-mail from C-Q, the House Science Committee's Environment, Technology and Standards Subcommittee will be holding a hearing October 30th on

this funding bill. C-Q says that any letters and comments from the public will be entered into the record. If you are concerned about the possible loss of information gathered and disseminated by the Space Environment Center, you may write to the House Committee on Science, Environment, Technology and Standards Subcommittee, 2320 Rayburn House Office Building, Washington, DC 20515. (CQ News Release, W2VU)

**

HAM RADIO IN SPACE: NEW ALL-HAM CREW ARRIVES AT ISS

A new three man all ham crew has reached the International Space Station, but only two of the new arrivals will remain on-orbit the next several months.

Called the Expedition 8 crew, the commander is NASA Astronaut Mike Foale, KB5UAC. He is accompanied on the I-S-S by Russian Cosmonaut Alexander Kaleri, U8MIR, and the Europen Space Agency's Pedro Duque, KC5RGG. All three arrived at the ISS on October 20th on board a Russian Soyuz transport vehicle.

Foale and Kaleri will repace Expedition 7 crew members Commander Yuri Malenchenko, RK3DUP and NASA Science Officer Ed Lu, KC5WKJ. Duque, who's flying under a contract between the Russian and Europen space agencies and will spend the week in space before returning to Earth with the Expedition 7 crew.

KB5UAC and U8MIR hope to be active on the ISS ham radio station as time permits during their stint in space. We will have other ham radio in spaced news later on in this weeks report. (AMSAT, published news reports)

Break 1

From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world W4GSO Greensboro Amateur Radio Club repeater serving Greensboro North Carolina.

(5 sec pause here)

**

ENFORCEMENT: HAM CHARGED IN AIRLINER CASE

A 20 year old ham radio operator and college junior has been charged with breaching airport security. The FBI says that Nathaniel Heatwole, WZ3AR, has admitted to planting box cutters, bleach and matches on two airliners. Amateur Radio Newsline's Paul Courson, WA3VJB, gives us a profile of Heatwole and his involvement in the hobby:

--

If you're a contester, you may have worked WZ3AR, licensed to Damascus Maryland, a suburb of Washington DC. In research for Newsline, a profile of a fairly ordinary young ham radio operator has emerged.

His listing on QRZ.com shows a willingness to QSL both to short-wave listeners and the amateur community alike. The Advanced Class licensee appears to have been primarily active on HF, in the specialty of contesting.

In August of this year he won a thousand dollar scholarship from the Foundation for Amateur Radio, a coalition of radio clubs in the area around Maryland, DC and Virginia. In a club newsletter, he was shown as headed into his 4th year at Guilford College in North Carolina, pursuing a double major of Physics and Political Science.

His former call is KB3CBW, and an internet search has found a snapshot of a young man closely resembling who now is a 20 year old seen in television footage and accused of trying to breach airline security. As KB3CBW, he is listed several times with photos a Dayton Hamvention, 1999 gallery.

His call sign also turns up on a contest log dupesheet for Field Day 1999 on 40 meters phone, and in other contests including a Maryland-DC QSO party. On a contest e-mail reflector, someone signing that name and call sign is asking questions about the beverage antenna, and how he plans to buy a better contesting radio than his Kenwood TS-140S, that the person was using as of the posting dated 1999.

By Feburary 2000, the former KB3CBW was turning up as WZ3AR on the webpage minutes of the Potomac Valley Amateur Radio club, which serves the same area as his licensed station location in Maryland.

This call sign also shows up in various contest logs, including an Islands on the Airwaves event and Field Day. WZ3AR was shown in 2001 as operating from Virginia's Chincoteague Island on 15 meters sideband. One message thread refers to a June 2001 issue of CQ magazine, and an article on keeping a footswitch from sliding around.

There was other advice.

In a contest discussion board, someone signing those call letters rejected the practice among certain hams of tape recording contest activity to later enter the information in a competitive logbook. The posted message said such a practice raises ethical questions, and that he advised against doing so.

The New York Times has quoted friends as saying he has offered strong pacifist views and is highly principled.

For now, he is charged with carrying a concealed dangerous weapon aboard jetliners, reportedly as a test of airline security and to demonstrate his alleged protest to perceived flaws in that security.

In Weashington, Paul Courson, WA3VJB, for Newsline.

--

After a court appearance Monday, October 20th, Heatwole, a junior at Guilford College in Greensboro, N.C., was released without bail for a preliminary hearing slated for November 10th. If tried and convicted, he faces a hefty fine and up to 10 years in a Federal prison. (ARNewsline(tm), published news reports)

**

ENFORCEMENT: FCC TAKES MORE ACTION AGAINST EX-KG6IRO

A follow-up to last weeks story regarding Jack Gerritsen, the ex-KG6IRO. The FCC has now taken action against another one of his licenses and again warned him to stay off the air. Bill Pasternak, WA6ITF, has more:

--

FCC Special Councel Riley Hollingsworth has written to tell Jack Gerritsen of Bell California that the Commission's Wireless Telecommunications Bureau has acted to set aside Gerritsen's General Mobile Radio Service or G-M-R-S license. This, pursuant to Section 1.113 of the Commission's rules.

The action by to set aside Gerritsen's G-M-R-S license took place on October 14th. Hollingsworth's letter says the action is based on Gerritsen's alleged continued unlicensed operations and complaints of deliberate interference from transmitters the FCC says that he operates.

Hollingsworth letter tells Gerritsen that his G-M-R-S application has reverted to pending status. Also, that it will be made a part of a forthcoming hearing to determine if the former radio amateur is qualified to hold any Commission licenses. This is the same type of hearing that Gerritsen's ham radio ticket currently faces.

Hollingsworth letter again warns Gerritsen that he has no authority to operate radio transmitting equipment. If he continues, Gerritsen could face both to monetary penalties and imprisonment. Hollingsworth also suggested that Gerritsen consult an attorney in this matter.

For the Amateur Radio Newsline, I'm Bill Pasternak, WA6ITF, in Los Angeles.

--

Meantime, the number of Los Angeles ares repeater owner operators that claim Gerritsen is interfereing with their systems continues to grow. For the moment, they and their control operators continue to turn repeaters off whenever the station claiming to be KG6IRO attempts to make a transmission over one. (FCC, ARNewsline(tm))

**

ENFORCEMENT: UNAUTHORIZED OPERATION LEADS TO LICENSE TURN-IN

Meantime, a ham has surrendered his license to the FCC after it was found that he caused problems for police radio operations. The FCC's Daryl Duckworth, NN0W, has the rest of the story:

--

Duckworth: "In March, the Enforcement Bureau notified Justin Whaley, KC9DCP, Columbia City, Indiana, that close-in proximity direction finding indicated that on numerous occasions between January 2nd and March 13th he interfered with the operation of the Columbia City Police Department radio system. In order to resolve this matter, he has agreed to relinquish his license until

March 28th of 2005 and agreed not to maintain or operate an Amateur station.

--

Whaley was requested to return his Amateur Service license to the FCC. (FCC)

**

ENFORCEMENT: FCC: STAY OF THE W6RHC REPEATER

A ham who refused to stay off a repeater after being told to vacate by the licensee has now received a notice to comply from the FCC. Again, the FCC's Daryl Duckworth, NN0W:

--

Duckworth: "A warning notice has been sent to Scott Rogers, K6EVP, of Paradise, California, for failing to refrain from using the W6RHC repeater ass requsted both verbally and in writing by the trustee of the Golden Empire Amateur Radio Society. The letter was isssued as a result of his failure, verified by the Office of Emergency Services of Butte County California, to follow operational rules set forth by the licensee and control operators of the repeater system for its users."

--

The letter went on to say that the FCC expects Rogers to abide by the request to stay off the W6RHC system and any other such request by a repeater licensee, control operator or trustee. If he uses the repeater again after receipt of the FCC warning letter, the agency says that it will initiate enforcement action against Rogers license. (FCC)

**

ENFORCEMENT NEEDED: PHONY TEXT MESSAGE TO CA CELL PHONE USERS

Bakersfield California area cellular telephone would probably welcome some FCC enforcement action. This, after they were awakened early Tuesday morning, October 21st to a phony text message.

According to news reports, someone managed to hack the areas wireless communications' system. The hacker then posted a message urging cell phone users to support a strike by many of the states grocery workers now in its second week.

The United Food and Commercial Workers Union denies responsibility for the message. A spokeswoman for the wireless service providers says that she does not know how it happened. She says that that wireless providers have no position on the strike. The sender of the message remains unknown. (Published news report)

**

RESCUE RADIO: MONTANNA HAMS GET BIG THANK-YOU

Amateur Radio's role in last summers Montana's forest fires haave received official recognition. This, when the US Forest Service and Helena area organizations hosted an appreciation picnic for all the voluntees who put themselves on the line to assist fighting the blaze.

According to the ARRL Letter, the event honored the firefighters, law enforcement officers and community volunteers who assisted with firefighting efforts in Lewis and Clark, Powell, Jefferson, and Broadwater counties. This included a number of radio amateurs who volunteered their time and gear.

Among those recognized were Jim Haslip, W7CK, and Rollie Fisher, KC7WBP. Haslip has been an aerial fire spotter for 40 summers. Fisher set up at Lincoln's Hooper Park every day during the fires, providing current information to residents and visitors. He and his wife were among the many families forced to evacuate their homes because of the fire danger.

Amateur Radio's support of Red Cross and other relief agencies during the fire emergency also received recognition. Lewis and Clark County Emergency Coordinator Bob Solomon, K7HLN, accepted a plaque on behalf of the Amateur Radio Emergency Service and the Capital City Amateur Radio Club.

An estimated 300 people turned out for the event at the Lewis and Clark Fairgrounds in Helena. (ARRL)

**

PROMOTING THE HOBBY: JOTA VIDEO NEEDED

If you took part in last weekends scouting Jamboree on the Air, and have some good quality videotape of the event, the people who produce most of the ham radio documentaries want to hear from you. As reported two weeks ago, Dave Bell, W6AQ, Alan Kaul, W6RCL and Bill Pasternak, WA6ITF, are always looking for good video of ham radio happenings that they might be able to incorporate into a presentation about the hobby. As scouting and ham radio enjoy a very unique relationship, this is an event that is sure to make it into one of their shows, but only if they have the pictures and sound. If you have video that you want to share, please e-mail the production team to hamvideo@juno.com and let them know what you have. They will get back to you with information on where to send it. Again that e-mail address is hamvideo@juno.com (The Producers)

**

BREAK 2

This is ham radio news for today’s radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**

HAM GATHERINGS: RSGB INTERNATIONAL HF AT MONTHS END

Turning to the ham radio social scene, if you plan to be in the United Kingdom from October 31st to November 2nd. listen up. Thats the weekend of the Radio Society of Great Britain's International High Frequency and Islands on the Air Convention.

This years venue is the Britannia Country House Hotel at Didsbury in Manchester England. Planned events include presentations on DXpeditions, technical lectures, presentation of trophies and awards, a contesting forum, and specialist areas for 5 MHz, 136 kHz, 6 meters and Q-R-P. More information is on-line at the RSGB website Its in cybespace at www.rsgb.org (RSGB)

**

HAM GATHERINGS: HANDIHAMS IN CALIFORNIA IN MARCH 2004

Back on this side of the Atlantic, word that the HandiHams will hold their 2004 California Radio Camp in Malibu California begining on Monday, March 1st, and continuing to Sunday, March 7th. Tuition breaks will be provided for beginners from Western states working on a first license or on a General, and for early bird registrations. An Operating Skills course will also be offered along with opportunities for learning about blind computing with JAWS, public service communications, and lots of getting on the air!. Also, an open ham radio test session will take place on Saturday March 6.

The camp is open to HandiHam members with disabilities. Organizers provide all food, lodging, ham radio classes, and fun activities for the week long outing. To request an application or more information call the HandiHams toll free at 866-426-3442 toll-free or e-mail the group to hamradio@courage.org (HandiHams)

**

NEWSLINE: NO MORE FAX

If you have been trying to send Amateur Radio Newsline a fax the past week then you notice that our machine is not picking up. The reason -- its been taken off line due to our inability to get unsolicted fax spammers to stop sending us unwanted advertising.

Even though it is a violation of federal law to send an unsolicited fax advertisement, that has not stopped the fax spammers. They make their living by sending out this unwanted electronic junk mail. And while much the same as the junk e-mail we all get, the big difference is that unsolicited faxes waste print cartreges and paper. And that costs Amateur Radio Newsline money that we just cannot afford to waste.

After spending the past year trying to get these nuisances to stop -- including an official complaint to the FCC, we have given up. If you need to send us a fax, you will first have to call us or e-mail us to arrange for us to turn the machine on. Otherwise, the fax is gone until the federal government acts to put the spam fax mailing companies out of business. (ARNewsline(tm))

**

EMERGING TECHNOLOGY: BALLOON DELIVERED RADIO

Turning to the emerging technology page, it now looks as if balloon delivered radios could bring new sound to North Korean residents. This, if a preacher gets his way.

Revrend Douglas Shin wants to help liberate North Korea by delivering radio recievers by balloon. Shin’s idea is to have helium filled balloons would carry radios acrosss the Demiliterized Zone into North Korea. An automatic valve would let the gas out slowly so the balloons touch down softly without damage to the payload. Once retrieved by the people in North Korea, they would only have to turn them on and listen.

Shin says that he plans to launch his balloons from South Korea or ships off shore. Included aliong with each radio will be prayer material and a North Korean bank note. The latter is worth about one U-S Dollar. (Published news report)

**

HAM RADIO IN SPACE: THE AMSAT VOLUNTEER SURVEY

AMSAT North America says that it has developed an on-line volunteer survey designed to identify the interests and skills of those who may be available to directly help in efforts to develop the amateur satellite program. The survey is designed to be completed and returned on-line, and takes only a few minutes to fill out. To request the survey, simply send an e-mail request to volunteer@amsat.org. (ANS)

**

SPECIAL EVENTS: REMEMBERING THE EDMUND FITZGERALD

Turning to operating news, members of the Stu Rockers group will be on the air from Whitefish Point and Paradise, Michigan on November 7th , 8th, and 9th about 10. This, for an event called `Remembering the Edmund Fitzgerald.'

2003 marks the 7th year that the Stu Rockafellow Amateur Society has sponsored a special event in remembrance of the famed ship and her crew. Look for the call N8F on 40 through 10 meters and QSL to Richard Barker, W8VS, 264 N. East St., Brighton, Mi. 48116 (W9RIF)

**

SPECIAL EVENTS: REMEMBERING VETERANS DAY ON THE AIR

Also, in recognition of both Veterans Day and the birth of the late General Curtis LeMay, W6EZV, the Strategic Air Command Memorial Amateur Radio Club will be operating stations K0AIR and K0GRL. This, on Tuesday, November 11th from 1200 hours to 2400 hours Zulu.

According to Darwin Piatt, W9HZC, the stations will take top the air in the general phone bands on or near frequencies ending in the numerals 47. Piatt says that his is in recognition of the year 1947 when the Air Force became a single entity. He says to QSL K0AIR and K0HRL to the Strategic Air Command Memorial Amateur Radio Club, P.O. Box 1292 Bellevue, Nebraska, 68005. (Via e-mail)

**

ON THE AIR: THE SOUTHEASTERN 6 METER NET

And Jim Worsham, W4KXY would like to remind everyone of the Southeastern 6 Meter Net which meets on Sunday nights at 9 PM eastern time on 50.145 Mhz SSB. The net control is usually Jim who lives in grid square EM84ab. If anyone has any questions about the net they can contact Jim directly. His e-mail is w4kxy@bellsouth.net (VHF Reflector)

**

PROPAGATION AIDS: TRANSATLANTIC BEACON IN PLANNING

The Marconi Radio Club of St. Johns, Newfoundland and the Caccalieu Amateur Radio Club of Carbonear are currently working to put a new 2 meter transatlantic beacon on the air. According to information from the Irish Radio Transmitting Society, the proposed beacon will operate on 144.4 MHz with power output of 250 Watts into an 11 element Yagi. It will be sited at about 90 meters above sea level.

**

DX

In D-X, At least five special event stations are on the air from Poland through the end of October to celebrate Pope John Paul the Second's Silver Jubilee. Keep an ear open for HF8JP; SN25JP, SR25JP, SO25JP and HF25JP. If you make contact QSL as directed on the air. (Via e-mail)

And ten German operators and their guests from other countries will be operating from Liechtenstein through the 31st of October. Keep an ear open for the call HB0/HB9AON using SSB, CW, PSK and RTTY on all of the HF bands. (RSGB)

**

THAT FINAL ITEM: MEASURING THE SPEED OF GRAVITY

And finally this week, it appears as if Albert Einstein was right. Amateur Radio Newsline’s Mert Garlick, N6AWE, tells us about what:

--
The great Albert Einstein was correct when he said that the speed of gravity matches the speed of light. This, according to astronomers who took advantage of a rare planetary alignment to survey the relationship of these two fundamental forces of nature.

Edward B. Fomalout of the National Radio Astronomy Observatory, and, Sergei Kopeikin of the University of Missouri, measured the amount that light from a distant star that was deflected by the gravity of Jupiter as the planet passed in front of it. The researchers used 10 radio telescopes scattered around the world to precisely gauge how light from a distant quasar was bowed or warped as it passed by Jupiter on its way to the Earth.

To make the measurement, the instruments had to detect a minute deflection of the light. Dr. Fomalout compared the required precision to being able to

measure the width of a human hair from 250 miles away.

Jupiter is in the precise position for such a measurement only once a decade. The locations of the telescopes ranged from from Hawaii to Germany. Researchers are very happy with the experiments seeming total success.

For the Amateur Radio Newsline, I’m Mert Garlick, N6AWE, near the Queen Mary in Long Beach California.

--

Knowing the precise speed of gravity is important to physicists looking for technologic break-throughs. It also affects some of the basic theories of the relationship of space and time. (Science Today)

**

NEWSCAST CLOSE

And speaking about time, we are out of it for this week. So with thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB and Australia's Q-News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline @arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), P.O. Box 660937, Arcadia, California 91066.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I’m Don Wilbanks, AE5DW, saying 73 and we thank you for listening." Amateur Radio Newsline(tm) is Copyright 2003. All rights reserved.

Your lack of a sense of humor is obvious, Len ;-) ;-)

Actually it's a commonwealth.
>
> "Build from scratch?"

Yep.

> Sure.

In case you missed it, Len:

I've built-from-scratch (not including kits, no carbon copies of homebrew
articles)
in my home workshops, at least:

5 receivers
5 transmitters
3 transceivers
4 transmatches
12 power supplies
4 TR systems
5 pieces of test equipment
various shack furniture, antennas, power cables, control systems, etc.

The above list does not include:

- surplus units converted/restored
- manufactured equipment restored/repaired/modified
- kits built or rebuilt

I've worked several of the regulars here on rrap using my homebrew rigs.
I can often be found on or around 7040 using CW.

And my transmitters have all been legally used in the service for which I am licensed.

> You got the scratch, Elecraft has the
> KIT you can build. All by yourself.

I built one of those back in 2001. Kits are not homebrew.

Now explain to us again about your 1948 unlicensed operations...

Hans,

I'm only on 10 meters (and 440), but might talk Tim, WB2KAO into sharing his shack. As long as you aren't using a computer to send and receive Morse, I think neither of us will have too much trouble. No straight keys, though; too dang slow. The best I ever managed was 27 WPM on those things. Kills your wrist in a hurry. :)

73 from Rochester, NY

And, I believe the immigration laws are appropriate, although there is
probably room for improvement in the areas of process and validation
procedures. I think there are background checks in place as a matter of
policy--they just aren't done or aren't done adequately enough. We can put
all the laws and rules into place we want--it is getting them carried out
that is the problem.

>
> Eligibility for state or federal "welfare" benefits should also
> be severely limited.
>

State and Federal welfare programs need to be abolished. This would take
several years and I don't know the intricacies of the systems so I won't
pretend to know how to do it or how long it would take. The only allowance
I might be convinced of would be to have some kind of training program for
parents of children, with childcare provided through the system. And, who
would be providing the childcare? People who have been through the training
program and have chosen childcare as their avenue of profession. At any
rate, no more welfare, period.

>
> I'd also do away with the law that states that any

I am in support of any person born here being a US Citizen. There are too
many legal, ethical and social issues attached to having it otherwise.

>
> The children born to
> non-citizens would be considered to be citizens of the parents' own
> country of origin.
>

If your thinking is that parents of children born here are automatically
excluded from being deported, you are wrong. Having a child born in the
United States does not "save" the mother or father from deportation. It is
just that they will be deported *without* their child. This is if the
immigration laws haven't changed over the last several years. I say
several, because it's been that long since I was politically involved in the
US/Central America issue and, at that time, parents were sent back to El
Salvador, Guatemala, or wherever--even if they'd had a kid here. The kid
stayed and was put into the custody of the state.

> It is because you and your ilk are attacking those that enjoy the mode.
> See how simple that is.

BZZZZZZT !!!

Once again the logic buzzer goes off on you "and those of your ilk"

I have never attacked those who enjoy the code BECAUSE they
enjoy the code. I have attacked them via debate and conversation NOT
thier use of code but stance on the morse code TEST. You have proven
my point *exactly* that you guys REFUSE to seperate the two issues.
I like to use morse code and don't attack it. If there are hams in here
attacking
the use of morse code on the air as a means of communication, that is a
seperate issue and I am not one of them. If you "and those of your ilk"
cannot differentiate the two you have a problem.

however, via example I thank you for making my point *perfectly*.
I happen to honestly and genuinely believe that you "and those of your lik"

are purposefully doing this, that you, for various reasons, well not
seperate
the two. Among these reasons is that, like a poverty pimp in politics
throwing
around the race card incorrectly and illegitimately, you are trying to bring
others to your side of the fight when originally they may not have had
an interest in it; furthermore, I believe you know that, left standing on
it's
own without falsely creating allies, the code TEST debate is heavily
out of balance in the favor of those *against*.

>
> Now one more simple thing.....if you and your ilk would stop attacking
those
> that enjoy using Morse Code on the air, then perhaps the debate would be
> more simple.

AND, if you would quit trying to make it personal (one of the greatest flaws
in debate procedure there IS!), and trying to make it an attack against
those
enjoying morse code instead of just an attack on morse code, the debate
WOULD be more simpler, there is no "perhaps" about it. You won't do this,
though, because the pro code test types will lose even more quickly and
with a greater margin than otherwise.

As I said before, thanks for proving my point via example.

BINGO!!!!
You are exactly right. I explained this in another form in this thread,
but you captured the essence of the argument perfectly.

As in politics, often a very weak stand or concept must be artificially
supported by, as you said, creating an offence or outrage that didn't
really exist. Certain political figures frequently take entire races
and try to bring them into the argument when there isn't an honest case
for what they are claiming.

Well, David, next you'll be told by him to explain *where* he's being intolerant and he'll be proclaiming to be one of the most wonderful people he knows....blah, blah, blah. Seems to me a couple of months ago he also posted some message about how "circumstances" in his life were causing him to review his attitude...blah, blah, blah.

All having been said before, and all with no merit of evidence...

You don't think "racist traiterous confederates" is name calling? THen what
would you call it?

Why am I "stupid?" What did I say that wasn't
> true? If the Civil War wasn't about racism and slavery, then why, in it's
> aftermath, did one of the most famous Confederate Generals, Nathan
> Bedford Forrest, organize the Ku Klux Klan?

The WAR BETWEEN THE STATES was because of the north not being willing to
grant the south economic freedom, or to give the southern states their RIGHT
to determine their own destiny, as was allegedly given to ALL states by the

constitution of the United States.

The south chose to disolve the relationship with the Union. The election of Lincoln meant this was not to be allowed. The south could not remain in a Union it did not desire to be in.

The issue of slavery did not come up until the so-called emancipation speech when the Union finally had won some battles. Even that was a farce, because the ONLY STATES it applied to was "those presently in rebellion against the United States". Which had already left the union and were no longer under the rule of the President of the United States. In otherwords a political scheme.

Oh, yeah, it was all about
> doing battle against all those nasty 'ole Yankee Carpetbaggers. Right.
> Which is why they took their frustrations out on black slaves.

I can see you have no knowledge of what happened at all in the south after the war. Johnson was now president, he allowed the northerners to go south and literally rape the defeated confederacy. Lincoln had no intention of doing this. The northern politicians, out of revenge removed all southern white politicians and appointed blacks. Which, for the most part, were ill prepared for the office they were in. The results was another rape of the white people. This is the root cause to the hate we NOW call racism.

As for the idiots running around with what they call the Confederate flag. They don't even know what they are flying. In reality it is the Tennessee BATTLE FLAG that is being degraded as the confederate flag. Their beliefs and ideals are totally alien to the rest of free thinking southerners.

You sir, are seriously confused.

Dan/W4NTI

Dan/W4NTI wrote:

> You sir, are seriously confused.

Larry is boundlessly ignorant-
He, like most Americans
(tragically, including most southerners),
has swallowed a long, despicable line of lies,
propaganda and swill force-fed to Americans as "history."

He, like most northern chauvinists, vomits it back up
not because he has any honest moral ground on which to be outraged,
but because it gives him the cheap illusion of moral superiority.
(mis)Leaders have long regurgitated this filth,
because they can use the resulting hateful black racism
and baseless white guilt to divide and conquer,
manipulating masses of gullible people
into giving them money and power.
It's worked for a hundred and forty years
for the (mis)leaders evil enough to spout it,
and against the people foolish enough to believe it.

Know what's funny?
I remember when my high school in north Louisiana was integrated.
It was done by forced bussing. After some initial grumbling,
and with occasional exceptions due to racists of BOTH colors,
we seemed to get along OK.
That wasn't the case in another city.
In that city, when forced bussing came,
white people turned buses full of black children over
and SET THEM ON FIRE. Bet you see that in the liberal-written
"history" books, do you? Dig hard and you can find it.
And this wasn't 1964; it was 1972.
Take a good guess where that was....
Hint: It was far north of Virginia.
D.S.

Keep on doing that. Eventually some may work...

>I've worked several of the regulars here on rrap using my homebrew rigs.
>I can often be found on or around 7040 using CW.

7040 what?

You have absolutely verifiable proof, iron-clad, evidenciary
documentation that such RF was actually generated by
this "home-built" equipment?

Keep at it old-timer. Eventually you can get to changing
frequency and work some other bands...

>And my transmitters have all been legally used in the service for which I am
>licensed.

So you say...because the FCC was too busy with other
monitoring.

All of MY transmissions and transmitters have been legally
used in the services for which I am licensed...and in the
radio services and government contract work which did NOT
require any civilian license.

>> You got the scratch, Elecraft has the
>> KIT you can build. All by yourself.
>
>I built one of those back in 2001. Kits are not homebrew.

So, you built it someplace else other than your residence.

>Now explain to us again about your 1948 unlicensed operations...

Why? Those were within the regulations of unlicensed RF
emitters at the time. AM broadcast band "wireless
phonograph adapters." :-)

You are welcome to retain an attorney to bring legal action
to bear on alleged felonious radio emissions of 55 years
ago! :-) Have him show us his cute legal briefs.

Contact Riley Hollingsworth immediately! Let loose the
legal hounds. Sound the Hue & Cry on the NTS! Bring the
might of the US government LAW down on me!

Are you erecting a new statute of limitiations or are you
just erecting?

Tsk, tsk, tsk...in 1953 I was transmitting 4 KW PEP SSB
ON some amateur bands. Legally.

Sue the United States Army for that. [remember what happened to "Tail Gunner Joe" when that senator tried to "get" the U. S. Army on another matter...]

Your time machine isn't set properly. Get to work and FIX it. We are now on Standard REALITY time, not the daylight savings time of your fantasyland of long ago.

LHA

I thought it was all about not wanting to test for morse code?

Morse code was first used in 1844. The US Civil War came after
that.

Is the "root cause" for all the hatred against NCTAs due to the U.S.
Civil War?

>As for the idiots running around with what they call the Confederate flag.
>They don't even know what they are flying. In reality it is the Tennessee
>BATTLE FLAG that is being degraded as the confederate flag. Their beliefs
>and ideals are totally alien to the rest of free thinking southerners.

Please, foxhole Dan, don't bring in the Tennessee flag into this.

That will bring out a member of the United States Morse Codists
(USMC). :-)

>You sir, are seriously confused.

Ahem...aren't you all terribly, seriously, erroneously confused?

Subject title is about "BPL full rollout in Va."

Broadband over Power Lines. Virginia, state of...

There was no radio in 1861-1865. Morse code was used on both sides. Nobody had any "power lines" to have anything broadband on...

Hello? Anyone home over there?

LHA

I don't know of any serious radiosporters using a computer to copy Morse.
Computers don't like the wide variability which our wetware modems process
without a problem.

Only incompetents use a computer to receive morse code.

And doing so in a contest is really dumb. Takes more time to get it zeroed in than it would if you bothered to learn cw at a reasonable speed.

See you in SSCW single op. And SSphone multi op.

Oh and in the last five years I have 4 cups phone and cw. And one cup phone only.

Missed em both in 99.

That was one reason for the content of the writtens, at least here in the USA.
If you look at the old "study guides" of the 40s/50s/60s, they are quite
focused on issues like band edges, harmonic/spurious emissions, rectifiers and
filters, modulation and measurements - all sorts of things one would need to
have some familarity with to operate a properly adjust a transmitter of those
times. Receivers and antennas, OTOH, got relatively little attention.

"Incentive licensing" was (in part) a move by the FCC to increase the
technological know-how of hams by requiring them to know more theory.

>>>Now, where
>>>just about everyone is using commercially built transmitting
>>>equipment, that level of detail is no longer of critical importance,
>>>and is no longer tested.
>>

>They hung on through the mid 60s up here, according to an old licence

>manual that I found recently. My point was, though, that rules like
>this made sense at one time in the history of the hobby, but later on
>(by the 60s, in this example) they were outdated, and retired.

I don't think that sort of thing was retired in the US because it was "outdated" but simply because it made less work for FCC to go with only multiple choice questions. Multiple choice also removes all subjectivity from grading - either you picked the one right answer and get 100% credit for that question, or you picked one of the wrong answers and get 0% credit.

It can also be argued that being required to draw diagrams does not really indicate anything other than the ability to memorize a drawing, with little or no understanding of what it really represents or how the device functions.

Schematic and block diagrams are still part of the US exams, btw. For example, a block diagram will be shown, with all of the blocks except one labeled as to function. The question will be something like "The block diagram of a superheterodyne FM receiver is shown - what is the function of the unlabeled block?". And the person being tested has to pick the correct choice. Or a schematic is shown, and one component identified, and the question asks what that component does. I recall questions on my exams back in the '60s where an incomplete drawing was shown, and the question asked what was needed to complete it (1 - capacitor from Point A to Point B, 2 - Inductor from Point C to Point A, ...)

How much radio knowledge should new hams be expected to learn before they get the license? Beyond the basic rules, regs and safety, that's purely a matter of personal opinion - just like the code test.

I've been doing it since Novice days back in 1967. Not that hard if you start off with simple projects and work towards more complex ones. What mode permits the most results from the simplest equipment? Hint: It's not SSB.

>retained!

A story:

There's an old story (various versions exist) about how someone's Grandma made
the best brisket in the world. Before she passed away, one of the grandkids
made one with her and wrote down every single instruction. And the first step
was to cut off an inch or two from the end.

The recipe and procedure was passed down for generations and everyone in the
family cut off an inch or two from the end as the first step.

Then someone discovered an old, old letter from Grandma in which she described
the procedure to a long-dead relative. Grandma writes: "First thing I do is to
cut off an inch or so from the end - because the briskets the butcher gives me
are always a little bigger than the pan I like to use" (!)

>>
>>>To review using an analytical mindset

I'm not "conservative" - I do the radical thing of saying "noise" or "interference".

>The truly devoted (?) say 'Hi Hi" when they want to
>indicate laughter - oh well, to each his own...
>
I found an article in a QST from the 1930s decrying such things, so they aren't new at all.

My theory is that some hams use CW abbreviations on 'phone in an attempt to portray themselves as somehow so steeped in CW practices that they "forget". Oddly enough, the most proficient CW ops I know don't do such things.

>>>even though they were only designed for
>>>brevity when using Morse code) - it is a quaint link to the past.
>>>
>>>Others, like mandatory CW testing, should be able to stand on their
>>>own merit based on solid reasoning - after all, we are forcing people
>>>to learn it to get in to the hobby (me included - the current price of
>>>admission to HF...) - so there should be a good technical or
>>>procedural reason to do so. This ain't the Masons....<:0)
>>
>>Sure - but what constitutes solid reasoning varies from person to person. I
>>think that the simple fact that hundreds of thousands of hams all over the
>>world use Morse on the HF ham bands is a solid reason to require at least a
>>test for skill in the mode at a very basic level - say, 5 wpm. Others
>>disagree.
>
>I don't think that I would agree that this would be a reason for
>testing CW competence - more of a solid reason for keeping CW alive as
>an approved mode on the bands. I tend to view making something a
>mandatory requirement in order to correct a problem, or ensure
>competency to prevent a problem.

Then would you want to wipe out most of the written exams? Because, after all, most hams don't cause problems - nor do most hams build their own rigs.

Which do you think is more common in today's amateur radio - a homebrew station or a ham that uses Morse code?

>If CW was not a mandatory
>requirement, would people still take the time to learn it? I believe
>that they would - those who are interested enough to use it anyway.

Sure, some would.

If we took out most of the theory questions from the written test, would people still take the time to learn it?

>>>Your rule set is actually a good one - simple, and to the point. If
>>>only people could work within straightforward frameworks like this -
>>>the regulators would be out of business.....
>>>
>>Agreed! But experience has shown otherwise.

>
>Very true, unfortunately. One can only imagine a world free of
>regulators and lawyers..... :)

They would arise again out of necessity.

How about the Mexican women about to give birth that cross the border into the US just long enough for her child will be born here, thus reaping the benefits of citizenship? Now this child, who's parents have never lived in the US and have never contributed a single thing to the US society, is now eligible for medical care, schooling, and any other welfare out country has to offer. Your hard earned dollars, part of which you pay in taxes, will now help to finance this child who himself will probably never contribute to US society, only take from it.

> shooting for.

Nope.

What YOU guys won't admit is that you refuse to seperate the issues of removing the morse code from testing requirements and removing morse code from the air. The former issue has all the backers and the strength of numbers; the latter does not.

however, you guys know that your side of the fence is doomed so your trying to mischaracterize the NCTA by hoping to make everybody forget the "T" in the word, and thus draw hams into the argument that may not otherwise have an opinion, or be against you.

Just like I said before, nasty socialist politicians unfairly use races of people in politics in the form of the race card to draw minorities to thier camp as they need the extra help in thier weak argument; you guys are, likewise, using the "they want to remove ALL code from the bands!" argument to draw code loving hams to your side when they may not have a problem with removing code testing.

I'm a code using ham, i've had to pass morse code tests to get my license, but I likewise DO see code test removal as a step in the right direction.

Sorry, but your attempt to control the debate by defining the words and controlling the language (an old debate folly) has failed.

Pretty much the same here - block diagrams and 'fill in the
blanks'schematics, with multiple choice answers.

Well, the Heath SSB transceiver was the most complicated piece of
radio equipment that I've tackled so far for restoration. If I was
going to try a 'designed by me' homebrew project, it would be a QRP
tansmitter - fairly simple to construct and
troubleshoot...comparatively, anyway!

>Advanced to Basic hams in Canada, anyway?

Over 50% are qualified at the Advanced Level (requirement:
examinations consisting of the Basic 100 multiple-choice questions,
plus an additional 50 on advanced radio theory).

I pulled a quick count of the total licence stats from the RAC website
this afternoon, and the (rough) totals are as follows:

Total licences issued: 57, 188
Basic Qualification: 28, 047
Advanced Qualification: 29, 141

In addition, the total number of Canadian hams with Morse endorsements
on their licence is 31,557 - approximately 55%..

Absolutely not - the writtens are intended to ensure that everyone
operating an amateur station is aware of the rules and regulations,
similar to the written driving tests that must be passed before
allowing folks out on the road.

>
>Which do you think is more common in today's amateur radio - a homebrew station

Good question - but removal of the theoretical questions would likely
have a much more dramatic effect on the overall technical competence
level within the hobby than the removal of code testing would.
Without an understanding of radio theory, operators would be limited
in their potential to grow into new areas of the hobby!

Okay, all you morose code lovers, a new book just for beepers:

"Lightning Man; The Accursed Life of Samuel F. B. Morse" by
Kenneth Silverman, published by Alfred A. Knopf, 504 pp, $35.

A biography of "Polymath's Progress" as the L. A. Times Book
Review section titled a full-page spread by Henry Petrouski
(professor of civil engineering and history at Duke University)
in the Sunday, 26 October 2003 edition.

Glowing reviews on the book, not necessarily on the character
of Finley (as he was called when a young man)...a rather routine
portrait painter of the early 1800s looking for some grande
scheme of fame and fortune, only one of which made it...with
the help of a lot of other talent...and others' money.

Ancient mariner, let not the fumes of that rotting albatross around
your neck affect your brain so much.

CIVICS AND GOVERNMENT classes would study the governmental
structures and organization of the states. GEOGRAPHY goes for
the land itself, may touch on the human names and government
structures for identification.

You can't keep that straight, either. Tsk, tsk, tsk.

That's NOT an amateur radio policy thing, is it?

Somewhere close to general old radio subjects you claimed as "fact"
that ol' Reggie Fessenden made his historic 1906 Christmas Eve
voice broadcast with a SPARK transmitter. [nope, rotary alternator]

You've not admitted to any error of factual statements, but you should
as a long-time "leader" in ham radio, presenting a good attitude and
all that ("unique ability of amateur's good will," etc.).

Now you've made another wrong "fact" but this time NOT about radio
subjects, about grade-school level academic things. Tsk, tsk, tsk.

Both wrong. Two strikes. Third time and you are out.

Better luck at "radiosport." [harf..."sport"... :-)]

The light at the end of the carpal tunnel is the surgeon's little fiber optic imaging probe trying to separate your dits from your dahs...

LHA

PS: PLEASE try to remember the general subject of this newsgroup, quit trying to dumb everyone down to chat room nonsense.

It could be argued that having to identify what a particular component in a
schematic actually does is at least as much an indication of knowledge about
that schematic as is simply being able to draw it.

So we have almost exactly 50-50 split Basic/Advanced. Interesting to know. And
VE amateur radio licenses total a little more than 8% of those in the USA. (Of
course the populations are different too).

>In addition, the total number of Canadian hams with Morse endorsements
>on their licence is 31,557 - approximately 55%..

let's see - in the USA before the recent changes it was 470,000 out of 675,000
- just under 70%.

Looks like Canada may be the next to simply drop Morse testing, though.

>into the spoken communications of the hobby.

I can remember some hams back in the '60s doing such things as saying "Kay"
instead of "over" at the end of a voice transmission. This was on 6 meter AM,
of all things.

>>>The truly devoted (?) say 'Hi Hi" when they want to

Late 1930s - 38 I think. IIRC it was by K.B. Warner, who was one of the key
(pun intended) figures in amateur radio from the mid' 20s until his death about
1948. KBW was second only to HPM in this regard, but is not nearly so widely
known.

There was also a column in the late '40s and early '50s called "Phone Band
Phunnies" that described and decried certain bad habits some 'phone ops tended
to acquire.
>

OK, fine - the written exams must include the regulations. And perhaps some safety (RF exposure rules) to protect others.

But what about the rest of the writtens?
>
>>Which do you think is more common in today's amateur radio - a homebrew

It's that way for a number of reasons, the primary one being economic.

Some of us, however, still design and build our own rigs. Note how we are sometimes met (not by you, Leo) with disbelief and ridicule for doing so.....

Is that really true?

Is there a dramatic difference in the overall technical competence of Advanced vs. Basic hams in Canada?

Is there a dramatic difference in the overall technical competence of the various license classes in the USA?

>Without an understanding of radio theory, operators would be limited
>in their potential to grow into new areas of the hobby!

Sure - but is it the function of the license exams to force that understanding on everyone?

In the Canadian system, if I understand it correctly, a ham who wants to homebrew has to learn more theory, and a ham who only wants to use manufactured gear can stick with the Basic. Or are there more privileges than the ability to homebrew granted with the Advanced?

In the USA, every ham can homebrew, but to get access to more HF spectrum, one must jump through the hoop of additional written testing, even if one has no intention of building anything.

All regulations start out simple. Then real life gets hold of them.

For many people, those tests are *not* that easy. For me they were, but
I had plenty of experience. It was still a week of fairly intense study.

Can the tests be passed with one of these weekend classes? Probably.
Just like college students do all-night cramming for their tests. You
pass the test, then quickly forget about it. They cheat themselves.

Short of essay questions, with the grader making an often arbitrary
right or wrong judgement on anything that isn't a numerical answer, we
are stuck with multiple choice. It's the worst system, except for all
the others.

Bob:

Every ham who has (had) the motivation and initiative to learn the material
required to pass the Extra-class written tests (and all the rest along the
way) already *is* an Extra. The rest either haven't found it yet, or never
will. In either case, their status won't change until they change it for
themselves. Twenty-three years ago, I couldn't imagine being a licensed
ham of any class, until it finally dawned on me that I had to do something
to make it happen. Once I got started, I went from nothing to General
in about six months, and to Extra in about 18 months. I'm just glad I
didn't wait any longer for someone to make it happen for me.

I just had a great QSO in the Extra part of 80cw with a 84 year old guy.
Really enjoyed it. I was running my 40 year old Hallicrafters gear and had
a blast with it.

And I came here. Bye....back to CW.

In the end, the ONLY way to stop illegal immigration is to force employers to exercise restraint over who they hire, with truly serious consequences for those who knowingly hire, or should have known they were hiring, illegal immigrants. As long as jobs better than what is available elsewhere are available and we have a weak enforcement process, illegal immigrants are going to come. Cut off the jobs and you clearly cut off the problem. Employers claim it is not their responsibility to check out potential employees. Nonsense. Employers routinely run checks on everybody else they hire and it is every citizen's responsibility not to contribute to obvious crime.

SB-400. Cosmetically OK, but a disaster inside - corroded rotary
switches, poor solder joints, wiring errors (17 of them - including
one which shorted out the LSB crystal - somebody must have been less
than happy with this set ...) and of course a complete set of high-ESR
electrolytics. Almost 50 hours on the bench to get it up and
running....

CW, most likely - I would prefer to start with something relatively
simple.

Haven't heard much on this so far! I posted the results of the survey
condusted by the Radio Amateurs of Canada a while back - it has been
submitted to Industry Canada (the FCC equivalent), but nothing since
then. No idea how long a decision will take - we have a system of
NPRMs here as well, and we're waiting for some indication one way or
the other.

And I really am incapable of understanding this behaviour. The
ability to visualise, design and implement amateur radio equipment is
a gift - one that the amateur community should hold in the highest
regard. Anyone could purchase and operate a modern HT, with minimal
training - it takes a great deal of skill to create something from
nothing. And, for those who enjoy the traditions of the hobby,
homebrewing harkens right back to day one!

Not as much as there was years ago, I suspect - testing has become
very much simplified over the last 40 years...

The Advanced level, like the Extra, does require a fair amount of
additional radio knowledge to pass. Is it enough? It depends - I'm
not aware of a study that would indicate whether the goals of the
testing were being met!

>intention of building anything.

Here, an amateur with a Basic licence has access to all bands above 30
MHz. Add on a Morse Code test, and full access to the bands under 30
MHz is granted.

The Advanced kicence, aside from providing the ability to homebrew
transmitting equipment, provides a couple of other perks - high power

TX operation, the ability to operate a repeater, and the ability to apply to become a volunteer examiner. There are a couple of other minor ones as well, but I don't recall them at the moment!

No annual renewal fees are due (these were dropped in 2000).

Those with a Basic licence are encouraged to homebrew as well - only transmitters are legally excluded from that licence class. Modems, receivers, antennas - no problem.

I suppose that a basic requirement for entry into this hobby is, and always has been, an interest in the technical aspects of radio communications. And, for the level of freedom to experiment that this hobby provides, I don't feel that it is unrealistic to expect new licencees to be required to demonstrate technical competency, in the form of written exams. I would assume that those whose desire to become a ham is strong enough would also be the type of folks who would want to continue to learn and grow. Perhaps I'm wrong - but the people that I have met so far (for the most part) follow this model.

writes:

>"Look lid you still don't get it, I am well aware the CW test is gone, my
>complaint still is the Give away Written."
>
>So why are we all not extras, then? If the writtens are so easy?
>
Well, for starters:

1) Some hams are just not interested in HF.
2) Some hams are not in a position to have an HF station
3) Some hams are not that interested in the relatively small amount of
additional privileges an Extra provides
4) Some hams have lost interest completely
5) Some hams haven't yet heard about the rules changes, or don't understand
them
6) Some hams haven't gotten around to visiting a VE session

Note how slowly the number of Advanceds is declining. In the 42 months since
restructuring, their numbers have only dropped by about 15%. At least half of
that decline is expirations, so the number who have upgraded to Extra is pretty
small even though the 20 wpm code test is long gone.

I agree and of all the licensing decisions made under 98-143,
the ending of Novice was, IMHO, not a good idea. That said,
I think once the dust settles from the code "test" issue, then
perhaps ARRL may wish to take a top down look at licensing,
licensing requirements and the concurrent privileges associated
with each.

The real problem with CB at the time and to this day was the "buy it
anywhere"
ability at prices net to nothing. Even in the early 70s CBs were less than
$50. Same is true today for FRS...but the good thing about FRS is the
lack of any real DX ability.

One problem we have discused before is the stupid focus on some
testing on elements of the rules that very few hams ever engage in...space
communications for example. Better to test on what we really want

most hams to be knowledgeable on that VEC qualifications, etc.

"Kim W5TIT" wrote:
>
> And, I believe the immigration laws are
> appropriate, (snip)

We allow more immigrants into this country each year than any other country on Earth, including those countries where most of our immigrants come from. This mass influx is driving wages down and prices up. Our schools are overcrowded. Education costs are going up. Medical costs are going up. Home prices are going up. Land prices are going up. Food prices are going up. Crime continues to go up. Our overall standard of living is going down. At the same time, I don't see a single benefit for the average American. Can you describe one benefit for me or my family, Kim?

> State and Federal welfare programs need to be
> abolished. (snip)

Why would you want to cut off the parachute put in place to help Americans? If you want to fix welfare, cut off the many thousands of illegal immigrants who are taking benefits from others. Next, get rid of the obvious bums abusing the welfare system. This two steps alone would cut the cost of welfare programs dramatically, yet still provide help for those Americans why really need it.

> There is no danger to US sovereignty. It may not
> be a US you like; but it is no danger of losing its
> sovereignty. (snip)

Kim, we've allowed millions of immigrants into this country from areas of the world openly hostile to the United States, with no method to establish their views of this country and its people. After 9-11, this is clearly not safe for Americans. Can you be so sure it is not a threat to our sovereignty? This reminds me of an old joke that is perhaps not that far from the truth; an enemy doesn't have to invade today - they can just fill out immigration papers for their entire army.

Blacks have almost the entire continent of Africa and Hispanics have almost the entire continent of South America. Perhaps you can explain why either group needs to expand to this continent, or why it is so wrong to resist that expansion. Unless we're prepared to spend lots of tourist dollars, they're certainly not rushing to open their doors to us.

Even under such an argument, the role and purpose of amateur
test requirements must be justified by more than just tradition, values and
other vague and subjective aspects.

The message is the same as that stated by the FCC in R&) for 98-143...
Rules must be justified.

>73 de Larry, K3LT

Don't be too hard on the Confederates. They didn't start the Civil War
by themselves. England was still harboring hostilities about the
Revolutionary War and the War of 1812. Getting the Southern States
agitated, and thus getting an ally, was a way to rip the country
apart. England had a lot of close ties with many Southern states, and
exploiting the animosity that the South held toward the abolitionist
North was their last-ditch effort to tear the young country apart.
Lincoln did what he had to do. Whether it was state's rights or
slavery, the South *wanted* a war, because England hadn't quit
fighting the war. General Daniel Sickles, a union general who lost a
leg at Gettysburg, even said that he'd support the South in their
state's rights efforts if they went about secession peacefully. Of
course, Fort Sumter changed all of that.

Just my two cents. I'm now going back into lurk mode.

Also, according to the Parson, by inference, all the no-code-test Technicians are "not renewing." :-)

Novice class has been declining for LONGER prior to restructuring and is still declining. So? Where have all the "upgraders" gone.

And where were all those talented 20 WPM Extras existing for YEARS prior to restructuring wtihout doing any advancing of the amateur radio state of the art? Were all those just sitting around waiting for restructuring so they could piss and moan "no-coders going to do the art advancing?"

If the Civil War was about slavery, then why was there a war at all? Prior to the war, the slave states were the majority in both the House and Senate, insuring no legislation could be passed to end slavery. Slavery was only abolished after the war by not allowing the former Confederate States (which included several, but not all, of the slave states) to participate in that vote.

> (snip) why, in it's aftermath, did one of the most famous
> Confederate Generals, Nathan Bedford Forrest,
> organize the Ku Klux Klan? (snip)

When you answer that, perhaps you can also answer why so many Northerners join the KKK.

> The South has a lot to answer for, IMHO. (snip)

Why would they have any more to answer for than the Northern states that profited from the sale of slaves? Or more to answer for than those who used indentured or bound black workers in the North, even into the early 1900's? Or more to answer for than the many countries around the world which practiced slavery in this last century (the 1900's), the previous century, or in the many centuries before that?

> (snip) Modern-day Rebels with the Confederate flags on
> their pickup trucks don't do much to heal the wounds of
> the past. (snip)

Perhaps because they have absolutely no responsibility for what happened in a past long before they were born.

And *there's* the connection between CW skill and technological development and self education in the ARS. Without code skill, that transmitter would be almost useless to you. With code skill, you could use it to work the world.

For hams, code skill *is* another tool in the toolbox.

OK - thanks
>
>No annual renewal fees are due (these were dropped in 2000).

Annual fees? Wow!

Amateur license fees here were dropped in the '70s. VE fees are for testing
only. One fee can, in principle, be used to go from no license to Extra.

>Those with a Basic licence are encouraged to homebrew as well - only
>transmitters are legally excluded from that licence class. Modems,
>receivers, antennas - no problem.

Interesting concept!

I suppose a Basic could homebrew a transmitter, but not use it until the
Advanced license was in hand...
>
>I suppose that a basic requirement for entry into this hobby is, and
>always has been, an interest in the technical aspects of radio
>communications.

For some, yes, but for others the public service and communications aspects are
dominant. Should someone be excluded from amateur radio because they're more
interested in what the radios can do rather than how they work?

>And, for the level of freedom to experiment that this
>hobby provides, I don't feel that it is unrealistic to expect new
>licencees to be required to demonstrate technical competency, in the
>form of written exams.

I agree - but what level of competency is reasonable?
And why isn't it reasonable to require a very basic level of Morse competency,
given how popular Morse is in amateur radio vs. how popularity homebrewing is?

>I would assume that those whose desire to
>become a ham is strong enough would also be the type of folks who

Not true, Stebe. I can claim anything I want. You do.

Hey, I think you just mentored me a little more. Keep up the good work.

> > You've merely mentored me in the misspelling of peoples names. That

Yup, the report that RAC submitted pretty much followed along with the
results of the survey that they did (which was pretty poorly
advertised, and consisted of the votes of less than 1500 of the
57,000-plus licenced amateurs up here.

I was surprised at the three licence levels proposed, though - wonder
where that came from?
>
>I suppose a Basic could homebrew a transmitter, but not use it until the

Correct. And, the radio skills acquired to enable one to successfully
design and build a homebrew transmitter would more than prepare one
for the Advanced exam.

It isn't a pure hobby, though. If I were to be doing this as a pure
hobby, I would simply be doing PSK31, contesting, and homebrewing.
Instead I help with nets, do public service at events, and whatever
emergency service might be needed. Some hams may not, but that means
they are slacking off and shirking their civic duty, IMHO.

>>>I raised this question because, frankly, the vast majority of

The reasons to continue Morse code testing are as valid, and solid as
those for removing it. This is not like making the prospective ham clean
out toilets with his or her personal toothbrush. It's testing for a
purpose. And all arguments for it's removal or retention are as valid as
each other. I could make the same argument for tossing out the satellite
operation questions as I could for tossing out Morse code testing.

I don't care about the details that some people try to toss out. Its the
same thing as the core.

> Although it is a valuable mode of operation, especialy in high QRM or
> QRN situations, (and fun to use!!), it was only a mandatory requirment

> commercial?) CW stations could communicate with amateurs interfering
> with their signals, and order them to stop.

This is one that I have a little trouble with, Leo. The amateurs needed
to have *some* method to communicate, and Morse code was one of the few
methods around then. SSB was just being born, voice was pretty much out
of the picture. So what's left?

> A secondary purpose may

you are correct, there are no hard reasons, no truly logical reasons to
keep Morse code testing. Or to get rid of it either. It's all opinions.

Then why the heck don't they get rid of those stupid questions about
satellite operations!!!! 8^)

The reason I'm not too wild about this argument is that it reminds me
of those arguments people used to make for some of the "progressive
schools" where the student made up their own curriculum

Here I see the fundamental nature of your approach. You see the ARS as a hobby, whereas I see it as a service. I have other things I do as hobbies, like building telescopes and grinding mirrors. Purely personal stuff that I find interesting to do. But my ARS experience is not only the homebrewing, contesting, and digital mode work, it is a way of giving back to the community. And yes, the groups we do radio comms for are part of the community, and appreciate the work we do for them. It's a personal thing, like first aid and CPR training. Them ain't hobbies.

> I believe that we need to position ourselves as forward-thinking,

> testing within the hobby, without a real technological reason to do
> so. That will not help us, or our image, one bit.

But isn't there some contradiction in there? I can't reconcile forward thinking and reduction in knowledge together myself. I can understand why we wouldn't have questions on tube equipment on tests, but the removal of a basic method of communication that can be used worldwide that has as a drawback that it can't be learned instantaneously is beyond my comprehension. It is in place as the lowest common denominator between two communicators. To me it is like having children learn how to do longhand math before setting them loose with calculators.

Is there any value in doing longhand math now? Why should we if we have a calculator?

With all due respect, Bill,

Isn't that statement really a subjective opinion? I mean, when you get
right down to it, almost everything in the test process is there or is
not there because of someone's subjective opinion that it's
"reasonable" or "necessary".
>

Sure - that's the easy part. The tough part is "what constitutes justification?"

And the point I was making still remains valid. Since amateur radio is not the military, a workplace, a guild or craft or union or association of professionals, its requirements should not be governed by those groups.

Direct quote:

"Remember, that before the changes that created the present no-code
tech, the General and Tech exams were identical. Only the code
separated them, and even there it was only the difference between
5 and 13 WPM."

That sentence, and the lack of other clarification, says that the
General and Tech writtens were the same right up to when the Tech lost
its code test in 1991. That's simply not the case - the written was
split almost 4 years earlier.

Note that the paper wants to give *all* Techs a free upgrade to
General! It also ignores the fact that any Tech who got that license
before March 1987 is already able to upgrade to General with no
additional testing. And it's been that way since April 15, 2000. And
that's not a giveaway because those folks *did* pass the same written
as Generals.

I never saw them that cheap, but then again, I wasn't looking.

But what you are effectively saying, Bill, is that the real problem
with cb was "lack of investment" by many who used it. They did not
take it seriously because they had invested only a few dollars and
practically no time or effort into getting set up.

Does that mean if cb sets had cost, say, $500 back then instead of
$50, that service would not have become such a mess?

Almost sounds like a new version of "what isn't worked for isn't
valued"

It used to seem to me that the one thing we could all agree on was
that the basic regulations (not talking about the fine-print stuff,
just the basics) were one subject that absolutely had to be tested
for. But the KL7CC paper suggests doing away with most of that!
Surreal...

Because the states with the most slaves could see that eventually they
would either have to face the complete abolition of slavery *or* leave
the Union.

> Prior
> to the war, the slave states were the majority in both the House and Senate,
> insuring no legislation could be passed to end slavery.

When? Check a map of 1860. There were 19 slave states, of which 4
stayed in the Union. Delaware was a slave state but it did not secede.

> Slavery was only
> abolished after the war by not allowing the former Confederate States (which
> included several, but not all, of the slave states) to participate in that
> vote.

The Emancipation Proclamation was written in 1863. It legally freed
most (but not all) of the slaves.

> > The South has a lot to answer for, IMHO. (snip)

> Why would they have any more to answer for than the Northern states that
> profited from the sale of slaves?

Which states were they? Slavery was abolished in the North by 1804. In
many northern states it was abolished before the Constitution was
written.

> Or more to answer for than those who used
> indentured or bound black workers in the North, even into the early 1900's?

Where was that done?

Indentured servitude is in no way comparable to slavery, btw.
Indentured servants *voluntarily* agree to work for a specified period
of time, usually as payment for training or a debt.

> Or more to answer for than the many countries around the world which
> practiced slavery in this last century (the 1900's), the previous century,
> or in the many centuries before that?

> > (snip) Modern-day Rebels with the Confederate flags on

> Perhaps because they have absolutely no responsibility for what happened
> in a past long before they were born.

All depends on what that flag is meant to symbolize.

--

Here's what I learned about the War Between the States:

First off, it didn't start as a war to end slavery, but rather as a
war to keep the Union together. Lincoln's early (1861-1862) writings
make it clear his focus *at that time* was on preserving the Union at
almost any cost.

The Constitution, for all its wisdom, did not have any clear provision
for what should be done if one or more state(s) decided that they
simply wanted out of the Union at one point or another.

When the Constitution was written, there was a fairly even balance
between slave and free states. Compromises were reached in order to
get the new Union formed as a country rather than a confederation.
These were compromises with evil, and they could not last forever.

But over time the two parts of the US developed in such radically
different ways that the compromises and balance could no longer be
maintained. It was clear by 1855 or so that slavery's days were
numbered because eventually the abolitionists would reach enough of a
political majority to simply outlaw it everywhere. The trend was clear
- it was only a matter of time. Revolts like John Brown's and the
strengthening abolitionist movement made the moral issue unavoidable,
and the Supremes were starting to come around, too.

So, given the choice between leaving the Union or abolishing slavery,
15 states tried to leave. Some outside the 15 states said "Let them
go", but it was clear to Lincoln and others that if even one state was
allowed to secede, the Union would eventually fragment - and those
fragments would be ripe for takeover from other countries, many of
whom were patiently waiting for the "American experiment" to fail.

Once the war began, however, it slowly became clear to Lincoln and
many others that what had caused the split in the first place was the
idea that a country could proclaim itself "free" and yet allow
slavery. It became clear to him that the only way to preserve the
Union was to abolish slavery completely. Thus the Emancipation
Proclamation and the constitutional amendment.

Is any of the above incorrect?

What's interesting is that Great Britain, from whom the colonies split on the issue of "all men [sic] are created equal", abolished slavery years before the USA did.

Jim,

Much of what you seem to believe is based on the falsehood that the
Emancipation Proclamation
actually freed slaves. The proclamation ONLY APPLIED to those states in
rebellion against the Union.

Unfortunately those same states were not a part of the union at the time the
proclamation was issued.

Thus the proclamation applied to no one under the authority and/or control
of the then fragemented Union.

The slavery issue was indeed a major part of the root cause of the war
between the states. BUT a major other cause was that of states rights. And
whether we would be a republic or a federalist government. The struggle
continues to this day.

We are called a constitutional government, or a republic, or a democracy.
The reality is we are none of , and all of that. The founding fathers NEVER
intended for the federal government to have so much authority and control
over the states. That was a major reason the Southern states left. Lincoln
had NO RIGHT, or authorization to FORCE the South to rejoin the union. The
whole war was a major mistake, and to the victors go the spoils, and the
ones that write the history.

You may ask how, or why, do I say these things? Because I was raised in the
North, a world class Yankee state of Ohio. I was educated by the

Northerners on this subject. And before I came to Alabama I too believed it hook line and sinker. No longer.

The South was right. We all lost that war, look at the mess we have in DC now. Think about it.

1797. ARRL has no FIRE for sale?

Newsgroup: rec.radio.amateur.policy
Date: 2003-10-27 18:54:10 UTC
From: lenover21@aol.com
Message-ID: <20031027135410.25517.00001648@mb-m15.aol.com>
Source record: 81473

As of 1300 EST on 27 Oct 03, the ARRL news page has not one word about the many fires in California which have consumed a quarter million acres (half the land area of Rhode Island), over 500 homes destroyed, over 11 dead, now in its 5th day. Over 5000 firemen are deployed and personnel and equipment from six western states are arriving to help firefighters in an area from Ventura County to the Mexican border.

Where are all the "emergency ham teams" who are supposed to jump like minutemen into all the disaster work?

All the ARRL news page has on it are a single "In Brief" squib about "Montana hams receive recognition" for the long-past Montana wildfires. PAST news.

The nice comfy northereasterners apparently don't recognize much of the western states of the USA, hardly have in the past. They only consider hurricanes and floods as emergencies...because those things happen in the east. Nice "representation of all" by the League?

Yup, there's the premier amateur radio communications outfit sitting up there in Newington with the Internet at its disposal (not to mention W1AW) and can't get the word out. Too busy being "representative for all amateurs?" Lots of nice newsy stuff elsewhere, especially localized along the east coast.

Center of population for the USA is well WEST of the Mississippi and California has the greatest population of any state in the Union and on par in population with all of Canada. Apparently "6-land" doesn't exist in the thinking of new englanders.

>they are slacking off and shirking their civic duty, IMHO.
>
Good point - the ability to use the hobby for community service is
pretty unique to amateur radio. (try that with R/C model planes, or
Civil War re-enactment!.....).
>
> The reasons to continue Morse code testing are as valid, and solid as

...the only difference is that the written testing consists of a
question or so on satelite operation - Morse continues as a complete
syllabus and test in its own right. I'm not convinced that it is
quite that important anymore to warrant this.

I do see your point, though - we'll have to 'agree to disagree', I
suppose...(a rare achievement in this newsgroup <8*p)
>

>to have *some* method to communicate, and Morse code was one of the few
>methods around then. SSB was just being born, voice was pretty much out
>of the picture. So what's left?

Here's the way I understand this one:

Agree that there most certainly was a time when CW was all that was
available to amateur operators (and was heavily used for commercial
radio as well as landline operations too).

Then, if an amateur were to be allowed to go on the air with no code
training, what would the impact to amateur radio be? You would have a
guy sending signals out that no one could understand, or answer. A
very frustrated operator, most likely - but no real damage to the
service itself. However, if that guy was interfering with commercial
or governmental traffic, and did not know enough code to understand
their signals to clear off the band immediately, major problems would
be possible. Multiply this by the number of amateurs playing around
with radio, and it would be a huge problem. CW proficiency testing
pior to licence issuance would be a big step towards preventing
situations like this one.

Now, with virtually no one using code except amateurs, and all of that
strictly within the amateur bands, this problem seems to be a thing of
the past. Just like a guy who sets up an improperly-functioning RTTY
setup (like I jusy did, a couple of nights ago...) - no major problem
- and no two way communications, either :)

Agree, to a point. There don't seem to be any logical reasons to keep
CW testing (I was hoping that this thread would flesh them out...).
OTOH, there is a reason to discontinue CW testing - the reason being
that CW is (for all practical purposes) no longer any more important
than any other available operating mode, today, in 2003. As such, is
it fair to compel people to learn and pass a practical test on one
mode in deference to all others? I don't see it!

Likewise, if the school board decided that "The Adz, Plane , Bow Saw
And Other Pioneer Tools" was to become a seperate mandatory subject,
which must be studied and passed prior to gaining a trade
certification in Carpentry - that would be equally wrong. It is
interesting to some (and at one time, the only way to build a log
cabin), but not relevant enough to be given its own course today.
Still, there are those who enjoy building with these types of tools -
more power to 'em!

You're right - for me, at least so far, it is only a hobby . Since I'm
relatively new to the avocation (a year and a half, so far), I'm still

in learning mode - I am interested in getting involved with ARES, and
may do so in the next few months or so, time permitting.

BTW - grinding mirrors? Now there's something that requires a lot of
patience! Wow!

>do longhand math before setting them loose with calculators.
>
>Is there any value in doing longhand math now? Why should we if we have
>a calculator?

But there is a technolgical reason in continuing to teach longhand
division - and that is, without knowing how it works, how will you
know when the calculators' answer is incorrect? (My kids have
demonstrated this concept to me many times.....they tend to believe
whatever answer the thing displays, without applying logic to see if
they entered something wrong - grrr) And for that reason, I think
that the current level of testing that we do to become an amateur is
not enough - as I have explained in previous threads, the level of
technical knowledge has dropped considerably over time. Longhand is
the check-and-balance for the answer presented by the calculator.

I don't quite see the analogy to CW, though - sure, if SSB
communications are not possible CW could be used to get through. But
the rest of the world is moving away from it (first the commercial and
government users, and now amateur administrations all over the world)
- I'd suggest that if there was any value to retaining it even as a
back-up mode of communications, it would have been retained by
someone.

I'd think, anyway.

> Much of what you seem to believe is based on the falsehood that the
> Emancipation Proclamation
> actually freed slaves. The proclamation ONLY APPLIED to those states in
> rebellion against the Union.

That's why I wrote:

"It legally freed most (but not all) of the slaves."

It did not free any slaves in the states that didn't secede, but those
states didn't have many slaves anyway. And although it declared most
slaves to be free, in practice almost none of them were actually freed
because the union did not control the land where the slaves actually
were.
>
> Unfortunately those same states were not a part of the union at the time the
> proclamation was issued.
>
That can be argued both ways. Unionists would say they were in
rebellion, secessionists would say they had seceded and were defending
themselves against invasion from a foreign country.

> Thus the proclamation applied to no one under the authority and/or control
> of the then fragemented Union.
>
> The slavery issue was indeed a major part of the root cause of the war
> between the states. BUT a major other cause was that of states rights.

Besides the "right" to have slaves, what rights did the seceding
states want that the Union denied them?

> And
> whether we would be a republic or a federalist government. The struggle
> continues to this day.
>
> We are called a constitutional government, or a republic, or a democracy.
> The reality is we are none of , and all of that.

We're not a democracy, because that oft-misused word means that issues
are directly decided by vote of the people. That's not the case for
most issues.

We are a constitutional republic, because the power rests primarily
with elected representatives but is limited by the Constitution.

> The founding fathers NEVER
> intended for the federal government to have so much authority and control
> over the states.

How do you know what they intended?

Even if the folks who came to Philadelphia in 1787 did not intend for
the federal government to have as much power as it grew to have, one
thing is certain: They did not intend for the Constitution to remain a
static, unchangeable document.

Do you really think that a country which proclaims "all men are
created equal, with certain inalienable rights" could long endure if
certain men were allowed to *OWN* certain other men? Particularly when
those *OWNED*, or their ancestors, had been kidnapped?

Even back then, in the case of anything other than a human being, such
actions would be declared "dealing in stolen property" and the goal of
law enforcement would be to return the stolen property to its rightful
owner. Why were human beings treated differently? How can *anyone*
argue that an innocent human being not own his/her own life?

>That was a major reason the Southern states left.

So it is claimed. But which rights were they concerned about? Did they
not want to pay federal taxes?

> Lincoln
> had NO RIGHT, or authorization to FORCE the South to rejoin the union. The
> whole war was a major mistake, and to the victors go the spoils, and the
> ones that write the history.

That's one interpretation of the Constitution. Another is that states
did not have the right to unilaterally secede from an agreement that
they had voluntarily entered into with the other states.

The US had already tried to operate under a looser system (the
Articles of Confederation) and had found them unworkable.
>
> You may ask how, or why, do I say these things? Because I was raised in the
> North, a world class Yankee state of Ohio. I was educated by the
> Northerners on this subject. And before I came to Alabama I too believed it
> hook line and sinker. No longer.

Then what should Lincoln have done? Simply let the seceding states
leave the Union?

Once that precedent was set, how long before the "United States" split
into more and more fragments? How long before the various fragments
were taken over by other world powers, such as England?
>
> The South was right. We all lost that war, look at the mess we have in DC
> now. Think about it.
>
It certainly would have been better if there could have been a
nonviolent resolution, but I don't see how that could have happened
other than to allow the Union to fragment - and the crime of slavery
to continue.

By compromising with the evil of slavery, the founders delayed the day
of reckoning - and made it that much worse.

And I'll ask again: What rights were the seceding states so adamant
about keeping that they were willing to fight a war in an attempt to
preserve them?

I'm sure they are like the rest of the country... We all know that
California is there - but we try not to dwell on it too much.

Most likely, you are not hearing news reports by hams in the west because
they are currently too busy doing something useful. One pattern I've noted
over the years is that reporting of ham involvement in emergencies generally
has a significant time-lag. I'm not saying that this is good or bad; I'm
just saying that that's how it generally goes.

P.S. Is it really true that they call California the "cereal bowl state"
because once you get past all the fruits and nuts, the only thing left are
the flakes?

From the Southern point of view the North was interfering with the Southern lifestyle. Folks take that real serious down here.

The North was applying taxes to Southern goods, the North was sending abolitionists down South to stir up the blacks into insurection.

Basically the South saw the North as interfering in what they had no business in.

And to this day. The southerners hated Lincoln. And that was the catalist to kick it all off.

Jim, you need to come down here a bit, you would understand a bit more.

>It's all an opinion, Jim.

My point exactly. And those opinions change over time. From the early '30s to
1951, FCC thought 3 license classes was the right number. Then they went to 6,
then to 5, then back to 6, then back to 5, then back to 6 yet again. Then in
1999 they decided 3 is the right number.

The more things change...

The ARRL is ultimately responsible for the production and delivery of
their magazine, however much they may choose to contract out; the
printer will do whatever the ARRL will pay them to do, within reasonable
limits. It's the ARRL's decision.

Up here in Minnesota it just doesn't seem to be of any importance what some radio-hobbiest club near Hartford, CT, writes about on their web page. The ARRL isn't relevant to the massive tragedy you folks are facing.

Rather than sending hobby radiomen, the State of Minnesota DNR is sending you one of our new Canadian-built arial tankers, an augmented flight crew, and additional DNR firefighters to help you and your neighbors.

Stay safe, Len.

Only problem with "200" is that it stops at 1936 and there was never a followup
book.

If you want a really good history of US amateur radio from the very beginning
to almost the present day, google up W2XOY's "Wayback Machine". Excellent
history in many chapters. Free for the download.

(extra bonus question: what is the significance of that callsign?)

One of the good things about amateur radio is that it defies a simple
definition. That's also one of the bad things!
What is a core purpose of the service to one person may be of minor interest to
another. For example, are technical smarts more important than public service?

>>>>I raised this question because, frankly, the vast majority of

>operation questions as I could for tossing out Morse code testing.

Most hams do only a small fraction of the activities open to them, in part
because most of us haven't anywhere near the time or money to do all of them or
even most of them. Yet almost all of them are on the test.
>
>I don't care about the details that some people try to toss out. Its the

>methods around then. SSB was just being born, voice was pretty much out
>of the picture. So what's left?
>
The anti-interference thing was just *one* reason - there are lots more. And it
really wasn't that much of a reason because hams had their own frequency
allocations and the government/commercial folks had theirs.

In fact, there was no international requirement for hams to pass code tests
until 1927.
>
>> A secondary purpose may

Try telling the hams who searched for shuttle pieces, or who are right now
helping fight the wildfires in California, that it's "a hobby". They might not
agree.

Looking through the anti-code-test petitions, though, we could also be seen as
a bunch of folks making a really big deal out of eliminating a test that
requires only the most basic level of skill in a mode widely used in the
Amateur Radio Service.

Does it not seem odd to require lots of theory testing for a license to use
manufactured radios, yet to claim that a simple 5 wpm Morse code receiving test
is a "burden" and a "barrier" to a license?

: BTW, you do know that the ITU only requires ID every _15_ minutes, don't
: you? It's always been that way, too.

If you're speaking of the ITU (nee CCITT) headquartered over here in Geneva,
their regulations reads:

S25.9 2) During the course of their transmissions, amateur stations shall
transmit their call sign at short intervals.

In your imaginations perhaps that short interval is 15 minutes. In your YL
imagination it perhaps that short interval is several weeks.

> but it did not secede.

Depends on the definition of a slave state, I guess. There were 18 Union States and 11 Confederate States. The three border states did not side with either and four of the slave states stayed in the Union. Even if you believe the three border states, and all of the Union States (including the four slave states), would have voted to end slavery, the Union did not have enough numbers to abolish slavery in 1860 had the South not seceded- remember, it takes 2/3rds of the Congress to pass an amendment. Since slavery was not threatened had the South remained in the Union, slavery obviously did not cause them to secede. In other words, the Civil War was not about slavery until the Union (then and now) decided to make it so. Whatever, it is certainly not what the South fought for.

> The Emancipation Proclamation was written in 1863. It legally
> freed most (but not all) of the slaves.

It freed only the slave in states "now in rebellion against the United States" and listed the specific states. It did not apply to slaves in any state that was not part of the Confederacy (it did not apply to slaves in the Union States). The 13th amendment, passed after the war, ended slavery throughout the United States. Read how the 13th amendment was passed by Congress and later ratified.

> Which states were they? Slavery was abolished in
> the North by 1804. In many northern states it was
> abolished before the Constitution was written.

So that makes their accountability less? In essence, you're arguing that the Northern states are somehow better only because slavery ended there before it ended in the South.

> Here's what I learned about the War Between the States:

It is "racist crap" to state the obvious, Hans? Do you deny Blacks control most of Africa and Hispanics most of South America? Why aren't you screaming about the inherent racism of single ethnic cultures such as those? Why is your outrage, your words of anger, always directed only at whites?

> Carried a little farther, yellow people have the entire
> continent of Asia, white people have almost the entire
> continent of Europe.....

Yes. And your point is? My point is that many, perhaps even you, openly and loudly advocate the movement of other races into Europe and North America, but not whites into Asia, South America, or Africa. Indeed, whenever whites do move elsewhere, it is immediately characterized as evil, racist, power hunger, and greedy.

> what Indian, Eskimo, or Inuit tribe does Dwight Stewart
> belong to that gives him a right to be in North America?

See what I mean? Do you really think whites came to this country solely to kill indians - that indians had no influence over those events? Why isn't there even a hint of sorrow in your words for the many whites killed by indians as they tried to peacefully settle across this country? Why is what the settlers did somehow worse then what indians did to other indians in their many wars?

IF (and it is a big IF) the FCC ever entertains some type of
license changes of the type being discussed there will be two
choices as to the affected hams already licensed. You can repeat
the 1968 approach and take away privileges or you can give
some people a "pass" while still impacting all new hams or
hams not already licensed at a particular level. Time will tell.

Probably because the sets wouldn't have found such a wide
market of accepatance for that price. Clearly the other
factor was the "no license" other than send in the
application approach.

Found this reference on Google:

Feb. 1, 1939. Broadcasting reports General Electric engineers recently
set up two experimental frequency modulation transmitters at Albany
and Schenectady, operating on the same frequency. They drove a test
car between the two cities and found almost no areas of interference
between the stations. The stations were W2XDA Schenectady and W2XOY
New Scotland

Haven't seen those stats - but seperate testing for Digital modes died
out with it!
>>
>
>And merely because something is old doesn't make it bad. Look at the way words

Certainly wasn't connecting 'old' with 'bad', Jim - just an
observation that as times change, priorities tend to shift as well.

>Try telling the hams who searched for shuttle pieces, or who are right now
>helping fight the wildfires in California, that it's "a hobby". They might not

It's a unique hobby - one where the skills learned and practised
within it can be taken out into the community in times of need, to
augment the 'professional' emergency services.

>>Is there any value in doing longhand math now? Why should we if we have
>>a calculator?
>>
>Exactly!

Not quite - longhand is still required to be understood before relying
on calculators, as it teaches the underlying principles of division
(and works without batteries!). It is simply a more rigorous method
of accomplishing the identical task - but without competence in it,
how would you know if the answer the calculator gave you was correct?
How would you check it? You would not really understand the mechanics
of division.

CW, in this analogy, is a different animal - more like comparing an
abacus to a calculator. In skilled hands, an abacus can give you the
same answer as a calculator (faster, too - watched a guy do it once!)
- but it is outmoded, in a world where calculators are cheap and
common.....one would be hard pressed to devise a compelling arguement
for teaching the abacus nowadays!

Well we have (on code testing) pretty good knowledge as
to what doesn't constitute justification.

Yet if you go back to 1968, wasn't an argument in favor of
incentive licensing by the FCC attributed to the needs of
industry for technically inclined people?

Cheers,

As defined by one not remotely involved in ham radio?

> The CW skilled all have maximum interest, the only ones in US
> amateur radio. All the rest are "knuckle-dragging CB-plussers"
> according to two extras in here.

So you take the view of two Extra Class licensees as representative of
all code-tested radio amateurs? You really should devote some time to
learning a bit about amateur radio.

> >5) Some hams haven't yet heard about the rules changes, or don't understand
> >them
>
> Inconcievable in an activity that is all about communication.

It isn't any worse than a fellow who passes himself off as a
"professional" writer and who can't spell "inconceivable".

> amateur radio state of the art?

Who says that none of them have done anything to advance the radio art?
Do you believe that it is necessary for every radio amateur to advance
the radio art? Better hop to it and obtain a license. Maybe you can be
a shining example for all of us.

> Were all those just sitting around
> waiting for restructuring so they could piss and moan "no-coders
> going to do the art advancing?"

They were probably getting on the air and operating. What were you
doing for those several decades during which you've declared an interest
in amateur radio?

I believe that crime rates have actually gone down, Dwight.

> Our overall standard of living is going down.

Really? I have trouble accepting your claim.

> At the same time, I don't see a single benefit for the average American. Can
> you describe one benefit for me or my family, Kim?

I can think of one, Dwight. Those folks work and pay social security
taxes so that you can retire and draw SS benefits. They also pay State
and Federal taxes. Many of them are very bright individuals. Some are
doctors. Some do computer design work. Some do menial labor which most
American workers don't desire.

> immigrants who are taking benefits from others.

I don't believe that we owe illegal immigrants anything. Legal
immigrants are entitled to the same protections and benefits which we
enjoy.

> Next, get rid of the obvious

There are a number of places in this world where governments are hostile
to the United States. That does not indicate that citizens of those
countries are all hostile to the U.S.

> ...with no method to establish
> their views of this country and its people.

On this one, you need to do your homework.

> After 9-11, this is clearly not
> safe for Americans.

I have trouble accepting your claim at face value. While it may be clear
to you, it isn't at all clear to me.

> Can you be so sure it is not a threat to our
> sovereignty? This reminds me of an old joke that is perhaps not that far
> from the truth; an enemy doesn't have to invade today - they can just fill
> out immigration papers for their entire army.

It wouldn't work. They'd all find jobs, start families, buy homes, cars
and TV sets. After they settled in, they could start complaining about
the newer immigrants fouling things up for them.

> Blacks have almost the entire continent of Africa and Hispanics have
> almost the entire continent of South America. Perhaps you can explain why
> either group needs to expand to this continent, or why it is so wrong to
> resist that expansion.

I hadn't realized the extent of your racist views, Dwight. Maybe you
have some insider knowledge of organized attempts by Africans or South
Americans to take over "our" country through immigration.

> Unless we're prepared to spend lots of tourist
> dollars, they're certainly not rushing to open their doors to us.

I lived in four African countries over a period of nearly ten years. In
all of those places, I found thousands of whites who live in harmony
with blacks. I don't know of many African countries who have government
policies aimed at restricting the flow of white residents into their
countries. That aside, I never found an African country where I'd
choose to spend the rest of my life. Many whites have.

Indeed, why should anyone learn longhand? (substitute Morse CW or
abacus) Calculators (substitute Yeacomwood boxes) are so available and
inexpensive, that there is no need to learn longhand mathematics
(Substitute Morse CW) any more. I have personally seen little children
crying over their difficulties with learning longhand math. If they just
used calculators they wouldn't be so frustrated, and perhaps even learn
to love math. Longhand math is keeping potential mathematicians from
getting their degrees and infusing the field with their fresh ideas! 8^)

Actually, if you at all buy the argument about longhand vs a calculator, you can hardly toss out CW by calling it an abacus (BTW, I learned how to use an abacus in grade school) Toss 'em both out or accept them both.

Second item down - "Amateur Radio in the 21st Century"

You can skim through the code test stuff - we've agreed to disagree on that.
What is really interesting is the *other* ideas, such as what should happen to
the entry-level license class, free upgrades, written testing....

The quaint press prodigies of the 1840s called the Morse-Vail
Telegraph System "The Lightning Wire." On the basis of that
they dubbed old Finley as "The Lightning Man."

I don't think Parson Jimmie goes into professional or commercial
communications history, only amateur stuff. The 1844 Baltimore
to DC line was for commercial communications using morse.

>Up here in Minnesota it just doesn't seem to be of any importance what
>some radio-hobbiest club near Hartford, CT, writes about on their web
>page. The ARRL isn't relevant to the massive tragedy you folks are
>facing.

The ARRL's vaunted Emergency classes are SUPPOSED to be
relevant to this sort of thing.

>Rather than sending hobby radiomen, the State of Minnesota DNR is
>sending you one of our new Canadian-built arial tankers, an augmented
>flight crew, and additional DNR firefighters to help you and your
>neighbors.

That's good to hear, Hans. My thanks to the good state of
Minnesota for their help.

The total of firefighting personnel is now greater than 8000 from
many states, engaged in three major firestorm locations over a
120 mile radius, North of Los Angeles County to south of San
Diego to east of San Bernardino.

Air Carrier flights have been slowed greatly due to evacuation of
an FAA air traffic control center near San Diego. That has
reflected to major urban air centers around the country. The
desert TRACON in northern part of Los Angeles is operating at
capacity trying to absorb some of the ATC load.

>Stay safe, Len.

Not a problem, Hans, but I thank you for your good wishes.

I'll just access ARRL news page for the latest "emergency
steps" to take. :-)

Have fun in the code contest. Keep that carpal tunnel open.

In article <m%inb.6096$083.3677@news02.roc.ny>, "Jim Hampton"
<aa2qa@frontiernet.net> writes:

>Len should subscribe to our newspaper. Late sports info is printed *two*
>days later. He may not understand that it takes time for information to be
>collected and printed (even if only on the internet).

Newspapers here in Southern California are printed DAILY. They
are as up to the minute as a press run for 1.4 million copies of
TWO daily editions of the L. A. TIMES.

Radio propagates faster than 180 thousand miles per second. So
does light. 15 million folks out here in the southern region can
SEE the smoke from (now) over 250,000 acres burned and burning.

Telephones work here, despite the insistence of some that "telephones
always fail during emergencies and disasters!" Communications
satellites work fine (there's a full set of them every 3 degrees along
the geosynchronous orbit). We have more Uplink mobile sets that
"work" commsats in the southern part than exist in the entirety of
most individual states.

There's the INTERNET whose well-distributed Backbone will defy
destruction from a massive nuclear onslaught. One in five Americans
has some Internet connection capability in 2002 according to the
U. S. Census Bureau.

FEMA "field-tested" its fly-away video bulletin board systems back
in the '94 quake to show, visually, health and welfare messages in
their most personal and familiar form.

Wire services have all kinds of data terminals and lines (most of
which are dedicated, leased lines, not through dial-up POTS).
Staffers and stringers at the wire news service bureaus are working
24/7 here as well as in the northeast.

ARRL has been advertising its vaunted Emergency Planning and
Operations classes for about two years now. It's time for them
to put their keys where their mouths were...time for the NTS to
quit trying to play Western Union impersonator games (they were
never very good at it).

It's also time that the Newington crowd recognized that MOST of
the United States and MOST of the radio amateurs it is supposed
to represent live WEST of the Mississippi.

NBC evening news with Tom Brokaw featured the decade-old
Emergency Communications Center in Los Angeles that
coordinates the firefighting efforts. NBC didn't interview any ham
radio "emergency groups" nor mention ham radio in any way.

>I only wish that my worst problems were the ARRL and CW vs no code. LOL.
>These guys are going to drop from coronaries or stroke long before their
>time.

Fine, then activate an Emergency Medical Team on Ham Radio to go
rescue those guys south of Boston having all those coronaries and
strokes. ARRL's image is more important than their substance.

ARRL is the ham savior. Ham radio shall not want. Beep, beep.

>I'm sure they are like the rest of the country... We all know that
>California is there - but we try not to dwell on it too much.

More than one tenth of ALL Americans live in California, dumbass.

It's the most populous state in the Union. Or did you think Tay-hass seceeded from the Union again?

>Most likely, you are not hearing news reports by hams in the west because
>they are currently too busy doing something useful.

Such as?

While I can't get much reach outside of NVIS' 300 km radius from these hills, I didn't hear anything on any HF ham band nets.

They are "doing something useful" just like they did in the 1994 Northridge quake...getting the hell out...MOST LIKELY.

>One pattern I've noted
>over the years is that reporting of ham involvement in emergencies generally
>has a significant time-lag. I'm not saying that this is good or bad; I'm
>just saying that that's how it generally goes.

Radio waves propagate at faster than 180 thousand miles per second, dumbass.

Are all these "emergency workers" getting organized by mean old telephone landline? Don't they know that "telephones always fail during emergencies and disasters?" [they are always saying that in here]

>P.S. Is it really true that they call California the "cereal bowl state"
>because once you get past all the fruits and nuts, the only thing left are
>the flakes?

No. California has a tremendous agribusiness that feeds most of the western, mountain, and middle western states. Texas couldn't possibly do near as well...they try with steer and say that their steer manure is "manna."

>Charles (No Texas jokes, please!) Brabham, N5PVL

Don't have a cow, dumbass.

Tsk, tsk, tsk. 5 1/2 days. Then, suddenly, "news" appears on ARRL that Something Is Happening Out West...a bit over two hours after I posted a No News Statement.

Somebody in Newington must have gone into the archives back room and found an Almanac showing more than 48 states in the USA. Wow! Discovery!

No problem on hurricanes...those are reported constantly after NOAA puts out the word. Busy morose code users activate Nets and Prepare For The Worst. This last one really had an impact with all the "devestation" everywhere, didn't it?

Really "with it" news reporting from New England...

Shut the hell up, you little USMC feldwebel. Learn to READ English.

As of 1 PM EST on the 27th of October the ARRL website news
page had NOTHING about the California wildfires. NOTHING.

Go "munch" someone else's shoes, preferrably some CROW
as dessert.

>> Rest of Len's typical ARRL bashing snipped.
>
>Hasn't Len made it clear on any number of occasions that he is not
>anti-ARRL?

ARRL is an EASTERN headquartered organization, more specifically
in the northeastern USA. ARRL doesn't seem to recognize that
MOST of the USA lives WEST of the Mississippi...including licensed
US radio amateurs.

I'm not "anti-ARRL." I'm just showing what they are and what they
are NOT. What they are NOT is NOT "representing ALL amateurs."

ARRL is eastern-oriented, almost obsessively so in concentration
east of the Mississippi. Not my problem. It's ARRL's problem.

Maybe that's why ARRL membership remains a minority of all
licensed US radio amateurs (only a quarter).

All the ARRL "represents" is its membership...but mostly it is the
executives and staff and board of directors of the ARRL that is
represented. Membership has to fall in line with that or be
excommunicated.

To bad about your demotion in the United States Morse Codists (USMC). You deserved it, though. Enjoy.

I sort of agree with below to a point. We have more than enough people in this country as it is. There are not enough jobs out there for those that are already here as it is.

We also need to stop this crap of being the worlds Welfare payor! If you go back as far as 50 years ago, the amount of aid and "forgiven debts" would cancel out our national debt! Now we are going to give Iraq a ton of money after bombing them??? Screw 'em..... It's not our problem, and I as a taxpayer resent having to pay for it.

> >
> > (snip)
>
> Salaries are going up.

Compared to the cost of living, salaries are going down. The minimum wage is a good example. To keep up with the cost of living increase over the last twenty-five years (to have the same spending power as 25 years ago), the minimum wage should be over $19 per hour. By the same token, a person earning $19 an hour twenty-five years ago should be earning well over $50 an hour today. Check it out yourself. Look at the minimum wage 25 years ago (or any typical wage 25 years ago) and increase it by the same percentage that living costs (rent, house payments, utilities, food, and so on) have increased over the years since.

> I can think of one, Dwight. Those folks work and

> Some are doctors. Some do computer design work.
> Some do menial labor which most American workers
> don't desire.

Americans working at those jobs would do the same things (pay taxes and so on), Dave. Why do we need immigrants to do that? Some of those Americans are even bright. As for the "menial" jobs, the only reason those jobs are menial is because employers choose not to pay decent wages to do those jobs. And as long as employers continue to find cheap labor to fill those jobs, there is no incentitive whatsoever to increase those wages. If anything, a ready supply of cheap labor only drives down wages for other jobs, increasing the number of menial jobs and decreasing jobs that pay decent wages. The direct result is less well paying jobs for all working class Americans.

> I hadn't realized the extent of your racist views, Dwight.
> Maybe you have some insider knowledge of organized

Obviously, if you twist what is said hard enough, you can call anyone a racist. I talked about expansion to this country, not "organized attempts" or "take over." Those were your words. For my reply to the charge of racism, see the last paragraph below.

> I lived in four African countries over a period of nearly ten
> years. In all of those places, I found thousands of whites
> who live in harmony with blacks. (snip)

A few exceptions don't change the rule, Dave. With the exception of South Africa, there are few countries in Africa where large numbers of whites work in government, the military, or in black owned businesses. In South Africa, whites (the minority) were loudly criticized for taking jobs, money, and power, away from blacks (the majority). The people leveling that criticism were not called racist - only those in the majority here are called racist for saying such things. After blacks gained control of the South African government, white employees were routinely replaced with blacks throughout the country. There was no criticism of this. After all, since South Africa belonged to the blacks (the majority), they should obviously have the jobs, money, and power. Of course, if a white (the majority) says that here, it is immediately called racism. Clearly, there is an absurd double-standard when it comes to the words "racism" and "racist."

I'll repeat - "I don't have a gun to your head." That in no way
insinuates that I have a gun to your head, because I don't and I said
I don't.

Do you now understand that I don't have a gun to your head?

Or don't you understand the contraction "don't?"

Me too - the guy who operated it was awesome - faster than me +
calculator, even today!

Not sugesting that either be tossed out, Mike - my comments are
related to the relative importance that should be placed on CW, or
abacuses (abacii?) in the context of the modern world. Some folks
will want to continue to use 'em, for a variety of valid reasons - but
they are no longer the primary tools for accomplishing the tasks that
they were originally designed for - does that mean that we should
insist that everyone gain competence in their operation, whether they
intend to use them or not? For what purpose? To accomplish what
objective? I don't see it.....

So let me make sure I understand your position......

Using your exact words, but interpolating your statement into US terms, it would read like this: "Since the US government (President, Vice President, Congress, the Judiciary) is clearly under white control, then black employees throughout the country should routinely be replaced by whites. After all, since the US belongs to the whites (the majority), they should obviously have the jobs, money, and power."

Does that fairly represent your position?

Good luck on this one now!

With warmest personal regards,

de Hans, K0HB

The closest thing I can find to a logical argument is that Morse CW will
allow an amateur to communicate with an other amateur in another country
who may not share his or her language. This *may* be of some use in an
emergency. Will it? Odds aren't all that hot. But here we have one of
those opinion things again. I think it is worth the effort, while many
others do not. And the odds favor them. Then again, I'm first aid, CPR
and defib trained, and will probably (hopefully) never need to use those
skills. But if I need them.....

Remember though, there is a difference between the adz and Morse CW.
hehe, the thought makes me chuckle. I look at it more like the way the
(Coast Guard?) has a sailed vessl for training on. There are many
important things that can be learned, even though those recruits are
using really ancient technology.

It is a tremendous amount of fun for me. I'm kind of an obsessive
compulsive person, and I can take out my tendencies on a mirror.
Grinding and polishing and testing are so darn much fun, and it's one
field where all the fussing pays off in the end.

>>>I believe that we need to position ourselves as forward-thinking,

Actually I agree. Too many people don't kow the basics of math anymore.

> I don't quite see the analogy to CW, though - sure, if SSB

> back-up mode of communications, it would have been retained by
> someone.
>
> I'd think, anyway.

What I think leads to the decline in use is that it uses a very
expensive processor - a human. We've tried to take humans ot of the loop
for years now, or at least skilled ones. It is a lot easier to train a
person to hit a button and make a copy than it is to teach them
something like Morse code.

And that I think is why the ARS can still get away with using Morse CW.
Our "wetware" does a superb job of translating the recieved signals, and
since this is a hobby/service/avocation, we aren't being paid, so we can
continue to economically use Morse/CW. In fact, the economics are the
reverse of what everyone elses are. They want to buy a piece of
equipment to replace an expensive human, and we already have - indeed
are stuck with the human - ourselves, and would have to spend extra
money for the needed equipment to work other emergency modes.

No it is not. The major problem is the Hawaii hams want first class service
and not have to pay for it. The block is actually with the postal service
who has contracted have all bulk mail to Hawaii sent by boat.

> either and four of the slave states stayed in the Union.

You're forgetting at least two states. There were 34 in 1861, but
18+11+3 = 32

Let's look at the states/commonwealths as they were in 1861:

Confederate states (formally declared secession, all slave states): 11
(VA, NC, SC, GA, FL, TN, AL, MS, LA, AR, TX)

Union states that did not allow slavery: 19 (ME, VT, NH, MA, RI, CT,
NY, NJ, PA, OH, IN, IL, MI, WS, IA, MN, KS, OR, CA)

Slave states that did not secede: 4 (KY, MO, DE, MD)

West Virginia was admitted as a Union state in 1863 by breaking away
from the rest of Virginia. "Mountaineers Are Always Free!"

> Even if you believe
> the three border states, and all of the Union States (including the four
> slave states), would have voted to end slavery, the Union did not have
> enough numbers to abolish slavery in 1860 had the South not seceded-
> remember, it takes 2/3rds of the Congress to pass an amendment.

Check your math, Dwight. 23/34 = 67.64..% - more than the 2/3 needed.
It would have taken 23 states to pass such an amendment. 19 nonslave
Union states plus only 4 others would have been enough - and that's
without West Virginia.

> Since
> slavery was not threatened had the South remained in the Union, slavery
> obviously did not cause them to secede.

But slavery *was* threatened, because the trend was clear to see. As
the West and Midwest developed, more and more free states would be
added. Many of the border states, like Delaware, had a low and

decreasing percentage of slaves and
slaveholders, so soon they would become de facto free states. (1860
census shows Delaware having a total population of 112,216, of which
1,798 were slaves. That's 1.6%.)

> In other words, the Civil War was
> not about slavery until the Union (then and now) decided to make it so.
> Whatever, it is certainly not what the South fought for.

Then what *was* the South fighting for? What rights did the 11 states
cherish so greatly that they would secede and fight a war to keep
them?
>
> > The Emancipation Proclamation was written in 1863. It legally

>
> It freed only the slave in states "now in rebellion against the United
> States" and listed the specific states. It did not apply to slaves in any
> state that was not part of the Confederacy (it did not apply to slaves in
> the Union States).

No argument there - but where were most of the slaves? In the
Confederate states!

> The 13th amendment, passed after the war, ended slavery
> throughout the United States. Read how the 13th amendment was passed by
> Congress and later ratified.
>
Do you have a problem with how it was done?

Consider this: According to the 1860 census, the *MAJORITY* of the
population in South Carolina and Mississippi were slaves. Do you think
the state governments of those states accurately represented their
population's views on the issue?
>
> > Which states were they? Slavery was abolished in
> > the North by 1804. In many northern states it was
> > abolished before the Constitution was written.
>
> So that makes their accountability less?

YES! Because:

A) they recognized the inherent contradiction of proclaiming "all men
are created equal" and then allowing some men to own others.

B) they did not have to be forced to abolish it from outside - they
did it on their own.

C) they did it *generations* before 1861.

> In essence, you're arguing that
> the Northern states are somehow better only because slavery ended there

> before it ended in the South.

Is that not correct? I'm not saying the northern states were without any guilt or accountability, or that they never had any slaves. The northern states, by compromising with evil, enabled the slave states to flourish. If someone does business with a thief, they become an accessory to the theft, and share the guilt.

It seems like you are arguing that all states are equally guilty, regardless of when they abolished slavery or how the abolition happened. Somehow I find that hard to accept.
>
> > Here's what I learned about the War Between the States:
>
> Fine. Since there are other messages to respond to, I'll ignore the
> remaining nine paragraphs.
>
Was anything in those nine paragraphs incorrect?

And I'll repeat the key question:

What rights did the 11 states cherish so greatly that they would secede and fight a war to keep them?

There are all kinds of indicators that both support and contradict
your point, Dwight. But what I see is that the general trend is for
some necessities (housing, medical costs, college education,
insurance, *taxes*) to be increasing in price faster than wages, and
for other items, mostly "luxuries" but some necessities (computers,
electronics, energy, food) to be increasing slower than wages. So what
you get are people who can afford a really sweet ham rig but cannot
afford a house to put it in.

The trend is further muddled by the increasing number of
two-career-by-necessity families. People forget that 30-40 years ago a
family of four could live a very nice middle-class lifestyle on one
middle-class income - and you did not need a master's degree to get
such a job.

There's also the increasing number of things to spend money on. I can
remember a time when, for most people, things like a second car, cable
TV, a computer, and many other things were luxuries. Today they are
almost essentials.

> result is less well paying jobs for all working class Americans.

Then what's the answer? Shall we eliminate all immigration, or just the illegals? Who gets to decide who should be kept out and who should be admitted, other than obvious threats to security?

There's also an important factor being left out: Many of the "good" jobs of former eras are being exported. Try to buy a shirt or shoes or computer that's "Made In USA". If you think immigrant labor is cheap, look at what the wages are in the developing countries. Remember NAFTA? Remember the demonstrators at the GATT meetings? What do you think they're demonstrating against?

How about this example:

Almost 100 years ago, my grandparents came to the United States from Italy. They left in part because of the 1906 earthquake, but mostly because they wanted a better life than they could get in Italy at that time.

They were admitted through Ellis Island, like millions of others. They wound up in Philadelphia, where they found jobs, learned the language, built businesses and lives, etc. I don't think any of them even had a grade-school education. They were from southern Italy, not northern or western Europe. They didn't speak English when they got here, and some of them never learned to speak it without an accent. They were Roman Catholics, a religion widely despised in the US for various reasons. They had to deal with all of the usual stereotypes applied to their ethnicity.

Today their grandchildren all have college degrees, good jobs, successful lives, etc. Typical American dream stuff.

Should they have been admitted to the USA or not?

(I'm sure some folks here would be really happy if they had been kept out ;-))

>
>Moron.

The legal population, legal as is common to all states, of
California, is still the largest of all the states. The "illegal
immigrant" population is estimated as a bit over 4 million here.
Had I counted that (but did not), California's population would
exceed that of all of Canada.

Texas ALSO has an "illegal immigrant" population...except you
wish to hide that under a 25-gallon hat as if it doesn't exist.
[oversize hat to fit swelled heads...]

Sorry, your yellow roses are wilting and your oil well is pumping
out noxious gas.

Meanwhile, ARRL does recognize Texas as belonging to the
amateur radio union due to Jim Haynie as elected president.
The executive-president-for-life (Sumner) gets to travel to Geneva
and play bigshot with all those "we know what is best for you"
editorials in QST...while enjoying having that other callsign for
his "Residence Radio Club."

ARRL has yet to recognize a REAL emergency/disaster except
for very eastern-defined emergencies and disasters which are
presented in almost excrutiating detail for days on the "we
represent 'all' amateurs" news page. Six days, almost a week
went by since their start before ARRL recognized wildfires in
California...which have now consumed 480,000+ acres,
destroyed over 1100 homes, and killed 15 human beings.

Feel justified in practicing socio-political-geographic bigotry.
After all, U. S. amateur radio is made up largely of white
males, isn't it?

Sacred purity in all things, including beeping.

"Kern?!?"

Who the hell are YOU, "JJ?" You one of them "knuckle-dragging
CB-plussers?"

You can REPEAT a phrase (write it verbatim) or make subtle
changes to PARAPHRASE it or you can invent a new phrase as
if to COIN it. "Kern" refers to particulars in the shape of type
fonts...you can kern a character's appearance but you CANNOT
kern a phrase.

ARRL doesn't pretend to represent any Citizens Band Radio Service
users. There's no license for CB in the USA. There has NEVER
been any test for CB ever, not once since it was created 45 years
ago. Morse code was never, ever required in USA CB...and CB
does exist IN the HF spectrum.

ARRL pretends to "represent" all radio amateurs but all it REALLY
represents is the opinion of a minority in control of a minority
membership that has not exceeded a quarter of all licensed U. S.
radio amateurs.

I have been a ham for over 40 years, so how long have you been one?

"Kern" is the word Ed Norton use for coin in the "Honeymooners". My use
of it is just a valid as you saying "one of them" instead of "one of
those". Good grief you are dumb.

Why should the ARRL pretend to represent the CB Radio Service? It was
established to represent the Amateur operators long before CB ever came
into being. Who would want to represent the sewer pit of communication
that CB has become? Why would they want to represent a bunch of idiots

who haven't a clue as how to properly use radio communication, that operate in a number of illegal ways and cause general havoc on the radio spectrum. The ARRL should not touch CB with a 10 foot pole.

> Morse code was never, ever required in USA CB...and CB
> does exist IN the HF spectrum

And there are a lot of other users of the HF spectrum that do not require knowledge of Morse code. When it comes to the code issue the subject is Amateur radio not the chicken band. So what's you point?

So who in the hell are you? Just another knuckle dragging dumb cber I suppose. As I said, "you don't know shit from Shinola".

>feet wet with it.

40 Meters, but there seems to be some confusion over where the digital
band assignments really are.....the RAC band plan lists 7.035 to 7.050
MHz for digital modes, while ARRL has 7.040 MHz as a DX RTTY freq.,
and 7.080 to 7.100 for RTTY communications. And, the last RTTY gut
that I copied was on 7.075 MHx. Hmm.... (scratches head...)

45 Baud seems to be the usual format for Ham traffic, but I have
copied a couple of 75 Baud ones.

I have been hanging out there receiving transmissions and setting up
the equipment. RX works pretty reliably (on my hamfest PK-232). My
old analog Heath TX tends to drift too much for reliable RTTY TX at
the moment (and maybe forever - still working on it...).

Looks like fun, though - if I ever get it together ;)

With the way thing are going, I'm not sure if I would want to rely on CW for emergency comms - the infrastructure isn't as solid as it was years ago, and will deteriorate further quickly as CW contnues to be dropped as a requirement.

As far as communicating with non-English speaking people, I hadn't considered that... Does it work? Is there enough commonality to get a message through? (my Morse so far has been primarily Englosh (not a spelling error ;)) - example "wx hr is cldy / ovrcst, ant is a dipole" -type stuff. A lot of English-based stuff - is that sort of an accepted International language?

I know that there are variants of morse for other character sets (cyrillic, for example) - I suppose that this might cause a problem too...

>

>

And this manifests itself in other areas than the CW arena. So many people are using microprocessor-controlled, dial & talk radios these days that a big piece of technical ability has been lost there too. Last week, I had some guy tell me to get my rig fixed because it was off frequency by about 20Hz. 20Hz - on my old analog Heath? With that set, I was doing good to be within 100.... The gentleman didn't know if his set had RIT, and was reluctant to QSY 20 Hz to 'correct my problem' - really! Jeez.

>And that I think is why the ARS can still get away with using Morse CW.

>are stuck with the human - ourselves, and would have to spend extra
>money for the needed equipment to work other emergency modes.
>

CW is by far the most economical mode of operation, from an equipment standpoint - no argument there. Progress frequently has significant costs associated, though - look at the millions that the owners of general aviation aircraft will have to spend to replace all of the current 121.5 / 223 MHz analog ELTs with the new digital 406.025 MHz ones! (or, you could gamble and risk not being found for a long, long time if you land off-airport somewhere.....)

Costs, as usual, passed down directly to the end user of the service. Of course!

Gang,

Shall we start a religion that is all about Morse?

We would get a whole lot better treatment than we do now, plus, we can deduct our CW expenses.

Our hymns are monotonic. Only the tempo changes.

Sincerely, and may Marconi bless,

The Reverend Dave, KZ1O
High Priest
The Live Free or Die State

Bill Sohl wrote:

<A whole litany of stuff snipped>

> I'll have to find that paper and read it.

http://www.qsl.net/al7fs/NCVECplan.doc

I think it is pretty important to read it, Bill. It is a very
interesting piece.

One of the emost interesting parts is that while the NCVEC claims it is
not "official" policy, the name of the doc is NCVECplan.doc.

and:

> "First, who is this committee, this ï¿½Gang of Fourï¿½? Who are these people,
>and who elected them as ï¿½Godï¿½? They are the NCVEC ï¿½Rules Committeeï¿½.
>This group of 4 persons consists of: Fred Maia, W5YI, John Johnstone, W3BE,
>Scott Neustatder, W4WW, and myself, Jim Wiley, KL7CC.

So this isn't official, but it comes from the committee, it's namedwhat
it is. But they tell us it isn't...................

Just one of the reasons that a few of us are kind of uneasy about the thing.

It takes a few gratuitous potshots at those who believe in the Morse
Code test, as well as a patricularly bizzare dig at homebrewers.

Oddly enough, it wants to encourage people who do not wear glasses to
join the hobby. That little jab was almost certainly at people who do
not wear bifocals, but as a wearer of glasses since the second grade, I
can tell you it was neither funny or appropriate.

It proposes HF access after taking a 20 question quiz that is passable
by an "average" 6th grader.

It proposes the applicant sign a statement that they have read and
understood part 97 - This is a hoot! I envision a "click here" like we
get when we install software and the terms of use screen pops up. And we
all read all of those, don't we? 8^)

It wants to take out "some of the math" two or more of the theory
questions because "we aren't making engineers - yet"

It offers some questions like:

>"What do you think is better for our hobby ï¿½ lots of enthusiastic
>newcomers, or an ever-declining number of increasingly older hams?"

Let's see, that sounds an awful lot like a "Have you quit beating your wife?" sort of question.

>"Morse will probably retain most of itï¿½s exclusive band segments, at >least for now. We are not addressing this issue at this time. This may >change in the future."

I give them half a point for being half honest - whoops, maybe only a quarter point for being only half right! Just how many "exclusive band segments" are there for Morse? Which is telling me that as soon as they have their way with getting the qualifications reduced for HF access, they will be going after getting the narrowband segments opened up for SSB. and if that isn't what they mean to do, why would they put that in the piece?

Their proposal to "slide" the bands down to take over the Novice segments and give the upper part of the bands to the "communicators" isn't removing anything from the data bands is it?

Finally, in one of the most strange bits of reasoning I have ever seen:

>"All existing Techs will be upgraded to General. Assuming that the >Morse requirement is removed first, our opinion is that most of the >Techs will take (and hopefully pass) the element 3 exam as soon as they >can, thus becoming General class licensees."

They are telling us that the existing technicians will study for, test for, and pay for something that they will get even if they flunk the test, or not take it in the first place!!!!!!!!

Someone who make a statement like this has no place throwing out the gratuitous insults they make towards those who believe that the Morse tests should be retained. It is plain stupid, can't sugar coat that one!

Some things I wonder about:

Is a person who is granted HF access on a 20 question very simple test that the hypothetical average 6th grader going to be all that worried about staying within the allotment given him or here? My guess is that they will not be too worried about straying outside their allocations. It happens already with generals in the Extra segments.

Will they be amenable to OO's? some will, and some probably won't. It won't take too many to make a mess.

If I were to hazard a guess, I suspect if a plan like this is adopted, there will be a rush of people getting the lowest level license. They will be on HF, and won't feel much reason to upgrade. They will very likely spread out from thier allotted segment of band, and talk where they like.

>"You know, fresh ideas, new blood, people that can actually see their >radios without having to put It pon (sic) glasses ï¿½ what a concept!"

Sometimes fresh ideas are not what we may want them to be!

Will I be wrong? Great Gawd I hope so! But it will be an interesting social experiment to see if we will improve a service by lowering the entrance requirements.

In the meantime, I'll be here, wearing my glasses, homebrewing, and enjoying myself.

My favorite quotes:

>"There are no black helicopters."

>"This is not a plot by ARRL or Fred (W5YI) or anyone else to sell more
> books, antennas, radios, or (fill in the blank)."

>"There is no conspiracy, no secret agenda, no kickback from the
>manufacturers, no ï¿½black planï¿½ from the ARRL, no anything. Just some
>guys that want nothing more than to see our great hobby prosper for
the >next hundred years, or longer."

Thing one:

Why do they go on so about conspiracies?

Thing two:

With a few notable exceptions, I think that those of us who wish to see Morse CW testing continued DO care very much about our great hobby. I take exception to the apparent belief on some NCTA's that we do not.

Final analysis:

If this isn't NCVEC opinion, they should get it off the title and quit referring to it so much. This is like the person that says "not to interrupt you as they interrupt you. If it isn't the NCVEC, then don't talk about the NCVEC. But it is.

What's with the gratuitous potshots? Want to turn people off? Start accusing us of seeing black helicopters or needing "It pon glasses" as if it is something bad to wear them (maybe we're genetically inferior?) Or even better, infer that the only people who care about Ham Radio are those who want the code test removed.

This is a bold step, to improve something by radically simplifying the requirements for admission. I haven't seen it work yet, but perhaps there is something different here?

1858. FCC Regualtions & Public Entities Policies

Newsgroup: rec.radio.amateur.policy
Date: 2003-10-28 21:13:27 UTC
From: Phillip Michael <gtg154a@mail.gatech.edu>
Message-ID: <bnmm64$s4v$1@news-int.gatech.edu>
Source record: 81334

Is an entity such as a public school allowed to adopt a policy that allow
them to confiscate any device on their property that interferes with their
wireless devices?

For example:
Both devices are Part 15.
The school owns a wireless access point.
A student owns a cordless phone.

If a cordless phone interferes with a wireless access point and
the school's policy says "they have the right to confiscate any device that
interferes with their wireless network"
Does the school really have the right to confiscate the cordless phone?

Also if a student's device is under part 97 do you still have the right to
confiscate it?

Here is a phrase from Part 15.5.b
interference must be accepted that may be caused by the operation of an
authorized radio station

Does this only apply to a device or to an individual using a device?

writes:

>I have been a ham for over 40 years, so how long have you been one?

I was on HF legally beginning in February 1953, a 1 KW BC-339,
one of 36 total transmitters at Army station ADA...increased to 43
by 1956. I got my first radio operator license from a single test at
an FCC field office in Chicago in March, 1956 (First Class
Radiotelephone).

I've never had, or tried to get, any amateur radio license. Mostly
because I've been a professional in radio-electronics for a half
century.

You know what? The FCC doesn't require any commissioners or
staff to have amateur radio licenses in order to MAKE regulations
concerning amateur radio. How about that!?

>"Kern" is the word Ed Norton use for coin in the "Honeymooners". My use
>of it is just a valid as you saying "one of them" instead of "one of
>those". Good grief you are dumb.

The "Honeymooners" went OFF the air long ago. Jackie Gleason
left this world a long time ago. Not everyone was a fan of a New
York based TV show on CBS during the black and white years.

DOS Tip: Not everyone speaks in New Yorkese or Jerseyish or buys
"gaz" for his auto while in Philly.

>And there are a lot of other users of the HF spectrum that do not
>require knowledge of Morse code. When it comes to the code issue the
>subject is Amateur radio not the chicken band. So what's you point?

The subject is NOT old black-and-white broadcast television, either.

>So who in the hell are you? Just another knuckle dragging dumb cber I
>suppose. As I said, "you don't know shit from Shinola".

Leonard H. Anderson

You want my mailing address? Look in the FCC ECFS for the 14
petitions for and against amateur radio code testing. You will find
my name and address and comments in there, at least two documents
per RM.

I don't work with feces and I don't make shoe polish. I'm a professional
in radio-electronics who has not hidden his identity.

YOU on the other hand, HIDE behind a couple letters and act tuff.
No USA database lists any "JJ" as the name of any licensed radio
amateur. Perhaps a foreign country might have it? :-)

Insufficient courage to reveal your identity "JJ?" Or are you going
to rationalize your gutless fear somehow?

Years ago I suggested here that one way out of the code test argument
would be to create a new "Homebrew" class of license. No code test,
Extra class written, all privs. Just one special requirement -

amateurs with that license class could only use equipment they'd built themselves (except in a genuine emergency). No kits, either.

You can imagine how that idea went over.

> >And merely because something is old doesn't make it bad. Look at the

All progress requires change but all change is not progress. Newer is not always better.

Some folks hold up "change" as some sort of mantra, saying that we should all accept change without resistance or question. I don't buy it.

> >Try telling the hams who searched for shuttle pieces, or who are right now

The emergency and public service aspects take it beyond being purely a "hobby".
>

> (and works without batteries!).

How does memorizing tables of addition, subtraction, multiplication and division teach underlying principles? It's just a mechanical skill, right?
Memorize the tables, practice the way you are shown.

Light-powered four-function calculators have been giveaway items for many years now. Yet we still spend enormous resources teaching children to do basic arithmetic manually - which usually requires pencil and paper anyway.

Every single argument used against Morse code can be used against doing basic arithmetic by hand.

> It is simply a more rigorous method
> of accomplishing the identical task - but without competence in it,
> how would you know if the answer the calculator gave you was correct?

How often are calculators wrong?

> How would you check it?

Why does it need checking? By that logic, we should resend RTTY
messages in Morse to check them.

Yes, I know more advanced TOR modes include error detection and
correction. So do more advanced calculators. If you are worried about
a human typing in the wrong numbers, the same problem occurs with any
TOR mode.

> You would not really understand the mechanics of division.

Why is it necessary to do so?
>
> CW, in this analogy, is a different animal - more like comparing an
> abacus to a calculator.

I disagree!

Morse is like doing manual arithmetic. Direct interaction with the
signal, just as manual math is direct interaction with the numbers.

No difference.

Your whole argument rests on *not* allowing Morse to be analogous to
manual arithmetic calculation...yet it is.

> In skilled hands, an abacus can give you the
> same answer as a calculator (faster, too - watched a guy do it once!)
> - but it is outmoded, in a world where calculators are cheap and
> common.....one would be hard pressed to devise a compelling arguement
> for teaching the abacus nowadays!

The abacus never achieved any great acceptance in western culture.
Morse did! And Morse is still widely used by hams.

>there will be a rush of people getting the lowest level license. They
>will be on HF, and won't feel much reason to upgrade. They will very
>likely spread out from thier allotted segment of band, and talk where
>they like.

How dare they?!?!?

And not even "approved" by the long-timer morsemen!

> >"You know, fresh ideas, new blood, people that can actually see their
> >radios without having to put It pon (sic) glasses – what a concept!"
>
>Sometimes fresh ideas are not what we may want them to be!

Of course not. Old, aged, long-time-in-the-bottle vintage
morsemen can't possibly accept that!

>Why do they go on so about conspiracies?

Tsk, tsk, you've named at least TWO such. :-)

>With a few notable exceptions, I think that those of us who wish to see
>Morse CW testing continued DO care very much about our great hobby. I
>take exception to the apparent belief on some NCTA's that we do not.

NCTAs understand that you, as a PCTA, want a Living Museum of
the Airwaves to Preserve and Protect morsemanship forever and ever.

> If this isn't NCVEC opinion, they should get it off the title and quit
>referring to it so much. This is like the person that says "not to
>interrupt you as they interrupt you. If it isn't the NCVEC, then don't
>talk about the NCVEC. But it is.

For many more years ARRL has said it "represents ALL radio
amateurs" yet they obviously do NOT.

Last I looked there were 14 Volunteer Examiner Coordinators in the
USA. Four does NOT equal 14, does it?

I apologize for using mathematics too complicated for you...

> What's with the gratuitous potshots? Want to turn people off?

159-year-old morse code hasn't "turned on" many new folks... :-)

Nobody in any VEC is required to kiss up to some long-timers who
think they own amateur radio and can use their squatters rights to
tell all they "know what is good for ham radio."

>Start
>accusing us of seeing black helicopters or needing "It pon glasses" as
>if it is something bad to wear them (maybe we're genetically inferior?)

Let's see...YOU just accused THEM of "conspiracies." :-)

>Or even better, infer that the only people who care about Ham Radio are
>those who want the code test removed.

Oh, my, how COULD they, those heinous 20 WPM code-tested Extras?

> This is a bold step, to improve something by radically simplifying the
>requirements for admission. I haven't seen it work yet, but perhaps
>there is something different here?

Oh? You do NOT believe amateur radio has ALREADY been "dumbed
down?"

Why don't you go argue with Broose, the "Extra-Lite CB-plusser?"

Most HF emergency communications by hams is done on SSB - because it's
easy to use. But under poor conditions it is sometimes backed up by
Morse.
>
> As far as communicating with non-English speaking people, I hadn't

Most DX hams I've worked pick up enough English to have a basic
conversation in Morse. Accents and such aren't an issue. Sure, the
same is true with TOR modes, but again they are not so common among
the DX.

> days that a big piece of technical ability has been lost there too.

Which brings up a major factor in anything done by amateurs: is a
thing being done for its own sake, or is it a means to an end?

In most applications, radio is simply a means to an end. Does someone
watching TV really care if the program gets to their set by means of
direct broadcast, satellite relay, coax cable, fiber optics, or some
other technology? In most cases, the answer is no - all the viewer
cares about is getting the program.

Same for things like telephone service. Once upon a time terrestrial
microwave was the cutting edge technology - then there were satellites
- now it's optical fiber, which isn't even "electrical" at all.
Indeed, communications satellites are already essentially obsolete for
communication between fixed points in most parts of developed
countries. Fiber offers much more bandwidth at much less cost.

Hams do radio for its own sake - which makes all the difference.

> Last week, I had some guy tell me to get my rig fixed because it was

In fact, if the human is eliminated, what's the point?

> CW is by far the most economical mode of operation, from an equipment
> standpoint - no argument there.

Not just economy but simplicity. How many homebrewers are we going to
have if they have to build rigs accurate to less than 20 Hz as first
projects?

> Progress frequently has significant

Since you do not hold an amateur radio operator's license nor seem to
care about ever getting one, what business is it of yours if the amateur
service has code testing or not? So what is your purpose for all the
petitions on amateur testing? You seem to think it is strange that the
FCC does not require those making rules concerning amateur radio to hold
an amateur license, yet you, without holding an amateur radio license,
can file petitons concerning amateur radio. How about that? Since you
seem to have such a hard on about the amateur radio service, of which
you are not even a member, why do you even bother? Why does it bother
you about what the ARRL is doing, or if the hams are or aren't handling
emergency comms in Calif. Perhaps you are just one of those types who
sticks your nose into things that don't concern you just to stir the
pot, or perhaps you can't pass the test for a license.

When I first became involved in electronics, slide rules were the one absolutely necessary calculation tool owned by every engineer and technician. They were simple, uncomplicated, easy to use (after some period of rather tedious practice), and delightfully low tech. They were the calculation tool-of-choice for over three centuries.

Then, as the giant asteroid was to dinosaurs, overnight the $9.95 pocket calculator killed the slide rule. Despite it's ubiquity and utter simplicity the mighty slide rule went extinct in less than a decade! Perhaps somewhere, in a backward company in a backward country
without sand from which to make silicon chips, a group of stalwart engineers still treasure their Pickett or K+E slipsticks, and still require a practical examination, down to the third significant digit, of an engineers proficiency, and whether they actually could explain the difference between the CIF and DIF scales.

Perhaps some amateur mathematicians still are proficient on slide rules
(after all, they haven't been outlawed!). I bet they even hold speed and
accuracy contests at a nostalgic "Slippers" convention each spring in Akron, Ohio. Led by the scratchy but firm voices of their oldest club members, Jim 'Bentupcursor' Nichols and Larry Elscale, they close each convention by quoting the 1940's fight song of that bastion of wood-assisted math, Cal Tech:

"E-to-the-x du dx, E-to-the-x dx,
Cotan secant tangent sine,
three point one four one five nine.
Square root, cube root, QED
Slipstick, slide rule, Hooray! CT!"

The next SLIPS newsletter duly reports the resolution of the IEEE BoD to

gain legislation to include slide-rule competency testing as a
requisite
to all engineering degrees, except those seeking 2-year Stickless
Technician degrees. Regular Technicians will require 5CPM (Calculation
Per Minute) exams, BSEE will require 13CPM, and MSEE will require a
20CPM exam.

On another front, when I first became involved in amateur radio, Morse
code was the one absolutely necessary communications mode used by
every
ham. It was simple, uncomplicated, easy to use (after some period of
rather tedious practice) and delightfully low tech. It was the
communications mode-of-choice for over three generations.

Then, as the giant asteroid was to dinosaurs, overnight.....

observe where the administrations went their own seperate ways...

I have just about finished the 'Wayback Machine' articles - what a
strange regulatory path the US ARS has taken over the years! More
politics than the average Tom Clancy novel....

>The emergency and public service aspects take it beyond being purely a
>"hobby".

That's where I was going with my comment above - they actually take it
right out of the hobby, and into mainstream emergency comms!

>How often are calculators wrong?

Fairly frequently - and always dur to input error! My kids have
illustrated this point often - I ask my 11-year-old "how do you figure
that 700 divided by 10 is 7?, and I get "that's what the calculator
said!". So, we get a piece of paper, and do the calculation longhand
- and the correct answer becomes obvious pretty quickly.

Point is, if you don't know how to do math the manual way, you don't
know how to do math!

>> CW, in this analogy, is a different animal - more like comparing an
>> abacus to a calculator.
>
>I disagree!

Well, long division is, by definition, the more rigourous manual way
of using a calculator to solve the identical problem. Really, they
are the same - or very closely related, anyway.

Morse communication is an entity all its own - with its own 'rule set'
(the code), and its own 'tools' (the key). You could say that Morse
could be sent today using a computer, and the long method would be by
hand and by ear - that would be a similar relationship to the division
analogy.

But to work the analogy around such that SSB (or any other mode, for
that matter) is the easy way, while Morse is the longer way - that's a
bit of a stretch, I 'd suggest. They're too different to link like
that!

>
>Morse is like doing manual arithmetic. Direct interaction with the
>signal, just as manual math is direct interaction with the numbers.
>
>No difference.

That statement is true, but only when comparing apples to apples.
Morse by key or bug and ear would be the manual, direct interaction
method compared only to using a PC to do it automatically.

>
>Your whole argument rests on *not* allowing Morse to be analogous to

>> common.....one would be hard pressed to devise a compelling arguement
>> for teaching the abacus nowadays!
>
>The abacus never achieved any great acceptance in western culture.
>Morse did! And Morse is still widely used by hams.

Agreed, And it will undoubtedly continue to be used, if only because
of its superioity under certain circumstances. I use it myself - not
nearly as proficiently as many, but I'm workin' on it....

But the question isn't whether it is a useful mode or not, or whether
it should continue or not - it should, and it will. It's whether it
is important enough to stand as a seperate test item for qualification
and privileges within the modern ARS.

There was a time that it should - but I remain convinced that time has
passed. By discontinuing Morse, there is no longer an impact on
public safety, or on emergency services, or on other users of the
spectrum - they all abandoned the mode some time ago. Its only
remaining practical use is for hobby purposes within the ARS.

And, don't forget the rest of the world - they are dropping the
requirement as fast as they can. Has anyone heard of a single
administration that has stated that they intend to continue to retain
their mandatory code testing? I haven't!

It would seem that anyone can control access to and use of any device on their property. Most likely it would be returned when the student (or whoever) left the premises. I remember well a problem at my worksite back in the 70s. Due to bickering over radio stations, department policy was to no longer allow radios at work (unless earphones were used). A couple of idiots had to have a boom box turned up loud on one machine. A supervisor went over to ask them to turn it down. "you aren't our boss" was the reply. The supervisor returned with the department head (he was the department head over 3 departments - and this was one of his departments). "who the h*ll are you?" the one asked. 10 minutes later, security turned up along with the superintendent. The radio was comfiscated. They were told that the radio would be returned when they left work. If it ever showed up again, they would be out the door and out of a job, no questions asked.

I suspect that something like this may be going on. Some schools may have a policy against cell phones. It is their call and taxpayers' money. I had a problem with a neighbor some years ago (I had a judgement against him and he wasn't going to pay). He had roofers working on his house and they had their ladder on my property. I asked them to move it. They didn't. I called the police. The cop was nice and tried to explain the situation to me. I simply informed him that he didn't have the full story. I didn't have to let anyone on my property, not even him unless he had a search warrent. He got the message and sent the roofers packing. Pure and simple.

Larry,

I'd gently remind you that there wouldn't be any citizens (well, very few - only the decendents of the original folks after the revolutionary war) at all under those rules. My great-grandfather and my grandfather (when he was 7) immigrated to the US in the late 1800s (my dads side). My mother's grandfather (my great-grandfather) immigrated from Canada. If their children couldn't become citizens, I wouldn't be one now. Heck, how could they hold a draft back in WWII with no citizens? Only draft foreigners?

>
> Does that fairly represent your position?

No, that's not what I said. That what racist liberals said about blacks (the majority) in South Africa. Now, let's see if I understand your position. As I see it, your position is that whites should NOT have the jobs, money, or power exactly because they are the majority - much of it should be transferred to minorities instead. Is that what you're trying to say? If not, what exactly are you trying to say, Hans? Where do whites fit into your grand vision of the perfect America? Where do the minorities fit into this vision of the perfect America? Are you sure the others races are going to agree and comply with your vision? Or do you think you just can whip them into submission by calling them racist when things don't go your way?

Your amateurish attempts at social engineering are damn scary to me. You're assuming the minorities are just going to goose step to your views of a perfect world - that none have an agenda of their own (an agenda that may not be so rosy for whites in this country). Blindly following that belief, and ignoring the inherent racism of the single race cultures these immigrants often come from (they have no desire for multi-race cultures in their home countries), you're inviting millions into this country each year. Pardon me if this causes me concerns (concerns you call racism).

Getting back to South Africa, liberals didn't like the white MINORITY having jobs, money, or power, in South Africa and they don't like the idea o f the white MAJORITY having jobs, money, or power, in this country. The only thing consistent about those contradictory views is a dislike of whites, minority or majority.

What "words have I put in others messages", Len?

It's clear from your many, many posts here that you want amateur radio to become a multiband version of cb.

You rail against "rank, status and privilege", and you make it clear you want one class of license, or no licenses at all.

You're against any sort of standards, values, or traditions in amateur radio.

You're constantly criticizing ARRL without justification, and even accusing them of fraud - again, with no evidence.

You deny the homebrewing success of others, and the public service
contributions of radio amateurs.

Quite clear what you would like amateur radio to become, good buddy ;-)
>
> Don't get all passionate about your piquish puerile parsonage.

I'm simply pointing out where your many complaining posts lead. If all of the
things you complain about were eliminated from amateur radio, it would become
quite like cb. You'd like that, I think.
>
> You were much better on the pulpit with your old Sermons On

What is that?
>
> Tens of thousands of radio people feel exactly the same way.

How do you know?

> What did YOU do back in 1958 when U. S. Class D Citizens
> Band was created?

Not much. But by the time I became aware of it, I was repelled by the immature
behavior of some of the users there.

What did YOU do to keep that service from becoming such a wasteland?
>
> NO test whatsoever back then, but licensed it was.

All it took was a fee and a signed form saying the licensee understood the
rules and would abide by them. Yet within a few years of 1958, many of the
licensees simply ignored the rules and did whatever they pleased on that
service.

> YOU've had 45 years to correct things.

Not my responsibility, Len. I'm not a cb user. Never have been. All I did was
listen there, and tune away in disgust.

I'm know many cb users are fine people, but the service is a mess, has been for
decades, and it was a mistake to have ever been created.

You seem to think it's a paragon to be emulated.

> Doesn't appear that
> YOU did anydamnthing except snap your suspenders and
> look down at others from a safe distance.

Not my job to fix cb. It's *your* job, Len - you're the "professional in
radio", right? You've been there since before the beginning, right?

What have YOU done to fix cb?

SB SPCL @ ARL $ARLX010
ARLX010 Amateurs Aid Agencies in California Fire Emergency

ZCZC AX10
QST de W1AW
Special Bulletin 10 ARLX010
>From ARRL Headquarters
Newington CT October 28, 2003
To all radio amateurs

SB SPCL ARL ARLX010
ARLX010 Amateurs Aid Agencies in California Fire Emergency

Amateur Radio Emergency Service (ARES) and Radio Amateur Civil Emergency Service (RACES) teams are assisting local authorities and relief organizations as fire has burned more than 500,000 acres in southern California. Authorities report 11 separate fires have erupted and more than a dozen people have died.

ARRL San Diego Section Manager Kent Tiburski, K6FQ, estimated that about 100 ham ARES and RACES volunteers are participating in his section, where most of the fatalities took place. Amateurs are supporting the Red Cross and The Salvation Army and staffing six shelters throughout San Diego county. Additional hams have deployed to San Diego-area emergency management offices and hospitals.

Communication is mainly taking place on VHF. The San Diego ARES Net has been activated on 7.233 MHz with 3.905 MHz as a backup. The Salvation Army Team Emergency Radio Network (SATERN) also has been using 7.233 MHz as a coordinating frequency.

San Diego-Area SATERN Coordinator Paul Cook, N6RPF, reports that SATERN has helped with communication for a number of busy canteens in the San Diego area.

In San Bernardino County, Orange SM Carl Gardenias, WU6D, said ARES volunteers have been supporting emergency communication in the county.

ARRL Los Angeles SM Phineas Icenbice, W6BF, reports ARES members from his section have been assisting volunteers in the Orange and San Diego Sections. Los Angeles SEC Dennis Smith, KA6GSE, says ARES volunteers from the section also are helping at Red Cross shelters in LA.

Dear Reverend Dave,

I'm shocked that you haven't heard of one of the great religions of Amateur Radio. Morsodism has been widely discussed here on rrap, but you might be an ignorant newcomer here, so I'll fill you in.

So you want to be a Morsodist. It's not easy, you know: you'll have to impose the stiffest constraints on your mind, accepting authority without question -- you will be subject to jeers and persecutions at the hands of the Spawn of NoCode, and you will suffer during your entire lifetime trying to throw pearls before the swine. But in the end, you will receive your reward from the Almighty in Heaven, and you will have the satisfaction of seeing all others being tossed into the Lake of Fire and QRM.

But enough of that; you're not there yet. You must first prove yourself worthy of being a Morsodist.

Lesson One: Developing Your Psyche

Right now I would like you to relax. That's it -- just sit quietly and let your mind go blank. Concentrate on one thing and one thing only: concentrate on your thumb. Now that thumb is no ordinary run-of-the-mill thumb: what you see is THE THUMB. That Thumb is your world. Nothing besides that Thumb concerns you in the least. As far as you are concerned, that Thumb rules over all. The only thing that should be in your mind right now is your Thumb and its absolute

authority over your life. Each and every line, ridge, wrinkle, and bit of cuticle is a Divine Mandate, eternal in its wisdom, power, and relevance. That Thumb was made by MORSE, and its sole purpose is to guide you to your Salvation.

Now, while still concentrating on that Thumb, begin to think about the world around you. Careful! Don't try to take in everything at once: start with the rest of your fingers, and slowly spread from there. See how your fingers are connected with and dominated by your Thumb. Now, slowly extend your perception to embrace your forfinger. It too was created by Morse, and it is all guided by the Thumb. Between your thumb and forefinger lie all the secrets of The Keys of Morse. The rest of the universe is of no concern.

Lesson Two: Establishing Your Doctrine

Congratulations! You've come a long way, but you're not there yet. What I want you to do now is to go to the nearest book store and purchase a copy of the FCCRuleBook. Preferably, it should be bound in nice, shiny black leather, and should have gilt edges and a red silk ribbon. It should be fairly hefty in size, but not so large that you cannot hold it with one hand. Finally, it should have the words of Samuel in red letters, for as you know the Son of Morse only spoke using red letters.

Now that you have yourFCCRuleBook, read it, and read it thoroughly. I imagine that some of it will fit in perfectly with your beliefs and morals, since you have been inspired by Maxim to attempt this indoctrination into Morsodism. As you read, you must remember that your beliefs are the ONLY right beliefs, and all others are falsehoods and are totally incompatible with Morse Divine Truth.

Now you may be dismayed as you read through the FCCRuleBook to find that much of it is outside your beliefs, or may even contradict them. No problem! All you have to do is take a black marker pen and blot out those paragraphs which you don't like. Simplicity itself! Now don't you worry if it seems that more of the FCCRuleBook is blacked out than left behind: just remind yourself that the remaining words are emphasized all the more.

Lesson Three: Living a Morsodist Lifestyle

Well, I'm sure that you Novices are simply bursting with questions on how to apply your new-found faith to your lives. I am pleased by your enthusiasm: such zeal is a necessity if you want to begin to work your influence on this filthy and sinful world and mold it into a clean and upright one. Those Spawn of W5YI are simply itching to be preached at, whether they want it or not, so let's get cracking.

First, obtain for thyself some sort of access to the internet newsgroups, specifically any (and all) newsgroups in the "rec.radio.amateur.*" lineage. Never mind that only one of them, the "policy" group is fit for Morsodists like yourself; you must spread

the word ALL the heathen NoCodists. Crosspost like crazy, verily even if attacked by Horrible Herman, the Lord High Newsgroup Purity Defender.

As you preach the word of Morse to others, you will inevitably run into those who not only doubt the veracity of your words, but who also pose trick arguments inspired by Lenny Liberal and his henchman, Crazy Charlie, the head Oracalist, in an attempt to trap and discredit you. This lesson deals with some of the major swords wielded by various tempters, and gives you some ideas on how to parry those weapons.

Technobabble scholars: these vermin use their high-falootin' technical jargon and book-learning to pervert the words of the Morse and read things into Part 97 which aren't there. The FCCRuleBook was written by Morse for YOU to use, and contains EVERYTHING you need to know for Salvation, plainly stated in black and white and red. There is nothing magic or mystical about it: it speaks out in the Words of Morse and speaks directly to YOU, as you have personally modified it to your belief set.

If other Spawn of NoCode say that the FCCRuleBook cannot speak the utter Truth because it is inconsistent in what it says, you can reply that there is no inconsistency in your FCCRuleBook: everything that you have in your FCCRuleBook perfectly supports your beliefs (remember Lesson Two). If they quote passages from the FCCRuleBook which they claim contradict your beliefs, you can reply that Oracle has inspired them to pervert the words of Morse and to twist their meaning around in order to try to subvert the Truth. If they say that you are being totally ignorant and irrational in your absolute belief in your Morsodist Doctrine, you can reply that they are being totally ignorant and irrational in their absolute refusal to believe in your Doctrine. And if they say that you are shutting your eyes to reality, you can reply that they are shutting their eyes to Morse.

Peace to you!

Hans, K0HB

I don't know if they can confiscate it, but they certainly are within
their rights to prohibit use of the device on their premises. Since a
cell phone transmits a signal even when not placing a call, they can
require that the unit be turned off at all times while on the
premises.

Tsk, tsk, going to add stuff after the "signature" of "imporance?"

I'm an NCI member also.

I'm also a Life Member in the IEEE.

>Don Ross (an extra who has never logged an HF
>contact)
>NL7CO/EM04

What a nice coincidence. Sergeant First Class Donald A. Ross
was the Maintenance NCOIC at Army Radio station ADA in the
mid- to late fifties. ADA was exclusively on HF using 43
transmitters. I have a nice digitized Signal Corps photograph of
SFC Ross adjusting a 4 KW PEP Western Electric transmitter.
Don was an amateur radio licensee, held both Radiotelephone and
Radiotelegarph First Class Commercial licenses. He would be
in his early 80s by now if still with us.

>
>What "words have I put in others messages", Len?

Those following -

>It's clear from your many, many posts here that you want amateur radio to
>become a multiband version of cb.

That's just your DELUSION and fantasy.

>You rail against "rank, status and privilege", and you make it clear you want
>one class of license, or no licenses at all.

I've never been for "no license at all." Poor baby, still delerious.

>You're against any sort of standards, values, or traditions in amateur radio.

I'm not interested in the standards, values or traditions of the
Archaic Radiotelegraphy Service.

Stop trying to be a proselyte for the Past.

>You're constantly criticizing ARRL without justification, and even accusing
>them of fraud - again, with no evidence.

Plenty of evidence of hypocrisy, false "representation," no verification
of their alleged ability to "know what is best for amateur radio."

>You deny the homebrewing success of others, and the public service
>contributions of radio amateurs.

I've never "denied it," delusional fellow.

You've never offered proof YOUR wonderful amazing state-of-the-art
homebrew radios worked...or even existed.

>Quite clear what you would like amateur radio to become, good buddy ;-)

I'm NOT your "good buddy." Haven't you got your eyes in?

>I'm simply pointing out where your many complaining posts lead. If all of the
>things you complain about were eliminated from amateur radio, it would become
>quite like cb. You'd like that, I think.

No, you are just voicing your fantasies and delusions and terrible
parsimonous pique and not honoring and respecting your noble

viewpoints.

>> You were much better on the pulpit with your old Sermons On
>> The Antenna Mount.
>
>Typical personal insult from Len rather than debating the issue.

You are preachy to a fault. You need a refresher at the
seminary. Or a retreat.

>Not much. But by the time I became aware of it, I was repelled by the immature
>behavior of some of the users there.

:-)

How old were you in 1958? How "mature" were you that you could
"judge" others?

>What did YOU do to keep that service from becoming such a wasteland?

Irrelevant. CB has far too many users for too little bandspace.

What have YOU done to eliminate CB or reduce all that waste?

YOU seem to know all, be all, yet do nothing of value except
extoll your own alleged expertise in OLD radio arts.

>> YOU've had 45 years to correct things.
>
>Not my responsibility, Len. I'm not a cb user. Never have been. All I did was
>listen there, and tune away in disgust.

Poor baby. "Disgust," is it? :-)

>
>I'm know many cb users are fine people, but the service is a mess, has been
>for decades, and it was a mistake to have ever been created.

Poor thing. You could have DONE something for the betterment
of mankind in 45 years, yet you have not...

>What have YOU done to fix cb?

Irrelevant. What needs to be "fixed?" Restore it to radio amateurs?

You can always file a petition with FCC to abolish CB. Go ahead,
make everyone's day. :-)

It might be done some time. It only took 24 years to make the first
dent in the 40m problem with SW BC interfering with the "rightful
ownership by hams" there. :-)

That "news copy" was on the ARRL website opening page.

There is NO corroboration of that information with any other
commercial news service.

ARRL is NOT a news service despite play-acting as if they were.

If the ARRL was a news service, they would have put that
information out at least four days before the 27th of October,
AFTER the wildfires had begun and weather reports indicating
ideal wildfire conditions.

All the ARRL news seems to be AFTER-the-fact "reporting,"

>
>And your point is?

Obvious to those who can think.

Those who REGULATE U. S. amateur radio are NOT required to be granted any amateur radio license.

You don' tsee the point?

Pity those unable to think.

The FCC does NOT sanctify any fraternal orders/organizations.
You are acting like the U. S. ARS is a fraternal order, all
"answerable to the ARS community" and all that folderol.

ARRL is a fraternal order of sorts. ARRL does NOT regulate
U. S. amateur radio. Never did.

>Since you do not hold an amateur radio operator's license nor seem to
>care about ever getting one, what business is it of yours if the amateur
>service has code testing or not?

What "business" is it of yours, anonymous entity?

> So what is your purpose for all the
>petitions on amateur testing?

You must have been away, far away from here if you don't know.

I'm advocating the elimination of ALL morse code TESTING.

Retention of code TESTING is just a constant dumbing down to
standards and practices in all communications of seven
decades ago.

Why do you wish to keep the U. S. amateur radio service
dumbed down to ancient methods of communications?

>You seem to think it is strange that the
>FCC does not require those making rules concerning amateur radio to hold
>an amateur license, yet you, without holding an amateur radio license,
>can file petitons concerning amateur radio.

ANYONE can file a petition with the FCC if they show good
cause for a petition's existance. Whether or not such a petition
is made an "RM" and put on the public record for comment is
up to the FCC, not you, anonymous one. [FCC will not accept
anonymity[

I have NOT filed any petition. I HAVE made Comments. That is
within my rights under the United States Constitution. Ever hear
of that document? It's a pretty good document. Read it some time.

>How about that?

How about what? Are you an advocate of abrogating the First
Amendment of the United States Constitution, anonymous one?

>Since you
>seem to have such a hard on about the amateur radio service, of which
>you are not even a member, why do you even bother?

Radio has NO sexual appeal to me. Apparently it does to you.

Have you seen a mental health professional about your strange
desire?

>Why does it bother
>you about what the ARRL is doing, or if the hams are or aren't handling
>emergency comms in Calif.

ARRL is a membership organization based in the U.S. northeast.
It has a MINORITY membership among all the licensed U.S. radio
amateurs. ARRL is also a political special-interest group with a
lobbyist firm and a DC legal firm on retainer.

I accuse ARRL of favoring regional northeastern interests and being
hypocritical over their ACTUAL "representation" of amateur radio.

Why do you wish control over who can say what in the USA?

Are you in favor of dictatorship? You must be from the way you
talk-type in here.

>Perhaps you are just one of those types who
>sticks your nose into things that don't concern you just to stir the
>pot, or perhaps you can't pass the test for a license.

Perhaps you need an attitude adjustment. A SERIOUS adjustment.

I'm NOT interested in joining any Archaic Radiotelegraphy Society.

All you've done so far is to target an individual with an ateempt at
personal attack. The subject is the geographic provinchialism of
the ARRL which is a political special-interest group.

You continue to hide behind a pseudonym. Why are you afraid?

Times change. Years ago, there were great open spaces throughout America just waiting for new immigrates to settle. Those shopkeepers, craftsmen, farmers, laborers, and so on, clearly benefited a new nation. The benefits today are subtle and the problems (job shortages and so on) more pronounced. Because of that, we have to cut back on immigration at some point. We can't have the entire world's population, or even a significant portion of it, living here. I think we've reached that point - the point where we cut back on immigration except for the very most extreme cases. And when I say extreme cases, I mean extreme cases. Economic considerations would not qualify. Those facing persecution or death in their home country would only be allowed to stay only as long as those threats exist, after which they must leave. To fill labor shortages here, we should retrain those already here.

The other states did not get involved. There were 18 Union States and 11 Confederate States. California and Oregon wanted nothing to do with the issue or the conflict. The four border states did not secede.

> But slavery *was* threatened, because the trend was
> clear to see. As the West and Midwest developed, more
> and more free states would be added. (snip)

The trend was not so clear. Certainly some of the Midwest states, dependant on farming, would want slaves.

> Then what *was* the South fighting for? What rights did
> the 11 states cherish so greatly that they would secede and
> fight a war to keep them?

You're looking for an easy answer to a very complex question. I suspect there were as many reason for the conflict as their were people involved. Some of the roots of the Civil War dates back to the Revolutionary War nearly a century earlier, where many Southerners did not want to break with England, sided with England during the conflict, and were persecuted for that afterwards. Others objected to the taxes and tarrifs on farm goods heading overseas, seeing that as similar to what the North objected to leading up to the Revolutionary War and reducing profits from their primary markets. Others saw the attempts for fix market prices on farm goods by Northern firms as a threat to free markets (and were angry the government did nothing to stop the practice). Others objected to what they saw as efforts by Northern States to limit the political influence of the Southern States. The list goes on and on (and I certainly don't have the time to go on and on here).

> No argument there - but where were most of the slaves?
> In the Confederate states!

Only if you ignore indentured, bound, or apprentice, workers in the North. These were people purchased at slave auctions (blacks), or from poor families (whites), and given contracts to work for years in Northern factories to hopefully earn their eventual freedom. Ben Franklin and his maternal grandmother were both once apprentice workers. She married the man who held her contract. Ben Franklin escaped to Philadelphia (breaking his contract and the laws). The only differences between this and outright slavery were the legal papers and the idea of possible freedom some day. Of

course, because of the working conditions, few ever lived long enough to be free. This practice continued long after slavery was abolished.

Better think of a better example than a cordless phone unless you are
referring to a cell-phone..... Unless the kid lives really close to the
school. The range is not that great on those things, at least not for
sustained communications.

The school district may decide to confiscate anything that violates their
publicized rules. If they feel it is interrupting or distracting the
students or feel that whatever the object is, is unsafe, then they could
confiscate. (unsafe object could be a knife for example)

A student is considered a "guest" on the premises and therefore does not
have exclusive rights as he would in his own home.

You talk a lot of sense, Jim.

I don't think we need look any further than the robber barons who are running corporations to see why living standards are declining. Not all can be an Enron or Arthur Anderson, but they can still manage to rip off their own employees quite well. They send jobs overseas, and layoff as many here as they can get away with, so each person left has more than one person's job to do. Even a blind man could see it going on.

Immigrants (like me) make handy scapegoats. Most legal immigrants, however, get in on 'family reunification'. If you want reform, that's a good place to start. Being from a 'first world' country _none_ of my family are interested in comimg here to live. Most of the people who get in that way are not well educated or highly skilled. There again, Jim's grandparents obviously turned out OK, so who's to say?

I got here by job-related immigration, where you have to prove that no American is available for the job, amongst other things. You do this by advertising the job, and you are allowed to advertise either in a newspaper, or a professional journal, or through the state employment service. Human nature being what it is, you choose whichever is _least_ likely to turn up a viable candidate. For a professional level job, that would be the state employment service.

If you truly want to make immigration tougher, and in fact the US is already one of the toughest countries to get into, you have to really look at these details, instead of spouting rhetoric. You also have to deal with the hard truth that every turn of the screw boosts illegal immigration, and there are limits to where the border patrols can watch. If there is any answer to that, it probably involves bringing the economies of Mexico and points South up to US levels. Somehow.

Discuss!

They can draft foreigners, who can then refuse to actually go on the ground of 'alienage'. This refusal is grounds to be refused a green card, but it seems, as far as I can tell, that an alien who already had a green card would not be affected in any way by refusing the draft. Also, an alien on a visa could stay as long as they had a current visa, even though refusing the draft would bar them from ever getting a green card. Bear in mind, also, that aliens who come here after age 25, like me, can never be drafted because we never get onto the selective service register. Of course, there is no draft at present, but all these rules kick in if it is ever reintroduced.

They were involved to the extent that they supported the Union cause financially and politically.

You previously claimed that "slavery was not threatened" because the free states could not get the needed 2/3 majority. I showed that was simply not true - it would have taken 23 states of the 34.

It's not a coincidence that 11 states (34-23=11) seceded.
>

Not at all! Iowa, Minnesota, Wisconsin, Indiana, Illinois...all farming states back then, all free.

The simple fact was that more free states than slave states were being admitted, and that as time went on the days of slavery were numbered - unless the Union were broken.

I'm looking for the facts. Some of those facts may not be things anyone today is proud of. I'm not proud that the founders could "proclaim liberty" and say "all men are created equal" and then allow slavery to exist in their country.

>I suspect
>there were as many reason for the conflict as their were people involved.

I'm looking for the facts.

>Some of the roots of the Civil War dates back to the Revolutionary War
>nearly a century earlier, where many Southerners did not want to break with

The Constitution forbid tariffs and taxes on exports. Only imports could be
taxed or tarriffed. This was obvious economic protectionism.

>Others saw the attempts for fix market prices on farm goods by
>Northern firms as a threat to free markets (and were angry the government
>did nothing to stop the practice).

In very broad terms, the problem was that the North industrialized and the
South stayed agrarian. The North rejected slavery in favor of immigration,
while the South allowed slavery to grow to the extent that by 1860 in at least
two states the number of slaves exceeded the number of free people.

>Others objected to what they saw as
>efforts by Northern States to limit the political influence of the Southern
>States.

That game was played both ways. The original Constitution counted 60% of the
slave population when allocating seats in the House of Representatives - but no
slaves were allowed to vote! So the slave states had a built-in political
advantage over the North, based on the illogical and immoral idea that a slave
was not a human being when it came to rights, but *was* a human being - or
rather 60% of a human being - when it came time to determine the political
population.

Was that fair in any way?

>The list goes on and on (and I certainly don't have the time to go
>on and on here).
>
The point is simple: Slavery was at the bottom of all those causes. It was the
root cause of the differences in economy, politics and culture that caused 11
states to secede.
>
>> No argument there - but where were most of the slaves?
>> In the Confederate states!
>
> Only if you ignore indentured, bound, or apprentice, workers in the North.

Those were not slaves.

>These were people purchased at slave auctions (blacks), or from poor
>families (whites), and given contracts to work for years in Northern
>factories to hopefully earn their eventual freedom.

They had *contracts* - BIG difference!

Which is completely different from being enslaved *forever*, together with all of your children. Most indentured servants worked out their contracts and became free. Most slaves never did.

Indentured and bound workers were (for the most part) working off debts. It was common practice for poor European immigrants to indenture themselves for 7 years to pay for their transatlantic passage. After that 7 years, they were free.

Apprentices traded their labor for education, working a set number of years in order to learn a skilled trade.

In most cases those workers entered into the contract *voluntarily*. And the contract had a definite time limit.

Those contracts were valid because both parties got something of value.

Slaves, on the other hand, were simply *stolen* from their homes by raiders and shipped off. They received *nothing* for their work and had no choice in the matter. There was no limit on their service.

>Ben Franklin and his
>maternal grandmother were both once apprentice workers.

Were they dragged from their homes in chains and sent thousands of miles away, to work the rest of their lives in a strange place with little hope of freedom? Or was it a voluntary, temporary agreement for economic and educational reasons?

>She married the man
>who held her contract.

How many slaves did that?

>Ben Franklin escaped to Philadelphia (breaking his
>contract and the laws).

Yep - he stole a few years labor from the man who held the contract. I understand that later on he paid off the contract.

>The only differences between this and outright
>slavery were the legal papers and the idea of possible freedom some day.

WRONG!

There's also the fact that the apprentices were not stolen from their homes and dragged away against their will.

>Of
>course, because of the working conditions, few ever lived long enough to be
>free. This practice continued long after slavery was abolished.

That's simply not true. Most indentured servants worked out their 7 years and were freed.

In fact, indentured servants were used widely in the colonies before the revolution, but in the South the practice became unpopular because the

plantation owners were always having to buy new contracts and the now freed indentured servants were setting up their own plantations using skills and knowledge learned while indentured.

We still have contract labor today. Actors, athletes and executives, to name a few, sign contracts where they agree to work for a certain period of time and receive certain benefits. Both sides are legally bound by the contract.

To equate the immoral horror of slavery with contract labor is simply not valid in any way.

Wow! Another revelation! Do you think you should be revealing this
kind of closely-held information, Len?

> Radio propagates faster than 180 thousand miles per second. So
> does light.

Those are interesting points, Len. That's why it is strange when we
have a power outage and don't receive our light at faster than 182k
miles per second, we tune our radio receivers to a local (this part of
the Ohio Valley) station and become upset that none of those stations
has a live news crew to provide updates on the power outage.

> 15 million folks out here in the southern region can
> SEE the smoke from (now) over 250,000 acres burned and burning.

Seeing smoke doesn't necessarily provide those inviduals with up to the
minute information on which specific areas have burned or whether they
or their homes might be in immediate danger.

> Telephones work here, despite the insistence of some that "telephones
> always fail during emergencies and disasters!" Communications

The snarly Una-basher speaks again. He must have been scared
(scarred?) by an ARRL diamond when he was a baby.

ARRL is in fact very California-centric.

There are more W6 ARRL members than any other call area.
Two of the fifteen ARRL Divisions are in California.
Ten of the seventy ARRL Sections are in California.

Amateur Radio volunteers, like hundreds of other various
volunteer groups, believe in doing it first, talking about it later.

Amateur Radio PAO folks are volunteers just like the folks who
are supporting the fire effort...Guess they just decided to prioritize
thier efforts and take care of business first.

> Radio propagates faster than 180 thousand miles per second. So
> does light. 15 million folks out here in the southern region can
> SEE the smoke from (now) over 250,000 acres burned and burning.

No doubt.

I have no sympathy for Southern Californians and thier "brush
fires" any more. I've been there...I've seen the mass butchering of
the land in order to put thousands upon thousands of cookie-cutter
homes in over-priced subdivisions, only to subsequently complain about
the overcrowding, pollution, excessive taxes, etc.

Many of these fires either occur or are exacerbated by the fact
that the natural watershed is shot and there's no natural defense
against fire.

> Telephones work here, despite the insistence of some that "telephones
> always fail during emergencies and disasters!" Communications

YadaYadaYada...Usually LennieRant soup-puss rhetoric.

Thata Amateurs are called to serve in some capacity byt the
organizations HE claims doesn't need them just eats at him...

> There's the INTERNET whose well-distributed Backbone will defy
> destruction from a massive nuclear onslaught.

Thanks for that bit of inciteful silliness, Lennie. After the
nukes hit, we'll drive right in to the affected area and see how well
we can access AOL from the local "backbone".

(...sheeesh...what an idiot...)

> One in five Americans
> has some Internet connection capability in 2002 according to the
> U. S. Census Bureau.

Will they STILL have internet after the phone lines have burned
down or a nuke just levelled thier homes, Lennie?

> FEMA "field-tested" its fly-away video bulletin board systems back
> in the '94 quake to show, visually, health and welfare messages in
> their most personal and familiar form.

Gee, Lennie...That was almost 10 years ago...A whole
decade...Then WHY does FEMA and every other disaster related
organization (INCLUDING California's OES) still feel compelled to keep
MoU's current with the ARRL, and STILL ask's then to participate at
these shindigs, Lennie?

> Wire services have all kinds of data terminals and lines (most of
> which are dedicated, leased lines, not through dial-up POTS).
> Staffers and stringers at the wire news service bureaus are working
> 24/7 here as well as in the northeast.

Yep. And they are not used for the purposes Amateur Radio is
used at these incidents.

Your point?

> ARRL has been advertising its vaunted Emergency Planning and

Most REAL Californians consider anyone not born IN California,
regardless of their United States citizenship, to be "illegal aliens".

That would be you, Lennie...

Blacks were obviosuly held as slaves in the South (nobody has denied that) and I've acknowledged that slavery played a role in the Civil War (the Emac. Proc. shows that). I simply don't agree slavery was the cause and have given some reasons why - which you've either ignored or tried to downplay. At the same time, you've pointed your finger at everyone else (the South, the founders, and just about anyone else you can think of) while ignoring or downplaying your own State's involvement in the slave trade. Above, you said the North rejected slavery. In another message, you said they did so before they were forced to do so. Both are true. But what you didn't say is that both are just barely true when it comes to your State. According to the Central Pennsylvania African American History Web Site (www.afrolumens.org/slavery/), quoting from the Pennsylvania State Archives (Harrisburg), slaves were owned in Pennsylvania as late as 1842, only 18 years before the Civil War. Seems like your State got out of the slave trade just in the nick of time - just in the nick of time for you to look down your nose at others today.

> > Only if you ignore indentured, bound, or apprentice,
> > workers in the North.
>
> Those were not slaves.

It was simply slavery by a different name. Most were sold into indentured servitude (especially the very poor and blacks) and were held in that situation by force of law. Most blacks were sold into lifelong servitude. Indentured workers serving fixed terms were rarely paid, instead promised money or land afterwards. Of those who were supposedly paid, the money was

often collected back to cover the costs of the employer. Their working and living conditions were horrible. Many, if not most, were abused by their employers and, because of working conditions or abuse, many died before completing their indenture. Of those who did serve out their terms, evidence suggests most remained poor afterwards, routinely deprived of the things they were promised. [Source: America, A Narrative History, pgs 118-121, Norton & Company Publishing, New York/London]

> They had *contracts* - BIG difference!

See paragraph above.

> working off debts. It was common practice for poor
> European immigrants to indenture themselves for 7
> years to pay for their transatlantic passage. After that 7
> years, they were free.

Yes, probably half the white settlers from England, Ireland, and Germany, entered the country using this method. But we're talking about blacks, not white settlers from Europe (the living and working conditions were rarely the same).

> > >become a multiband version of cb.
> >
> > That's just your DELUSION and fantasy.

Why?

You are not a licensee in the Amateur Radio service.

You have no vested interest in the Amateur Radio service, either
in a pecuniary interest, or it's practical value as it exists.

You bad mouth anyone and everyone who dares to stand up for it,
wether they "support" your version of code testing or not.

I'd say you support a multiband version of CB...That may not
havev been your exact words, but it's certainly what you've been
pontificating for.

> > >You rail against "rank, status and privilege", and you make it clear you want
> > >one class of license, or no licenses at all.
> >
> > I've never been for "no license at all." Poor baby, still delerious.

You've suggested this on several occassions, stating that the
"one license fits all" should be a "license for everyone". So what's
the difference, Lennie?

> > >You're against any sort of standards, values, or traditions in amateur radio.
> >
> > I'm not interested in the standards, values or traditions of the
> > Archaic Radiotelegraphy Service.
> >
> > Stop trying to be a proselyte for the Past.

He was talking about the Amateur Radio service, Lennie...What's
this "Archaic Radiotelegraphy Service" you cite? It's not in FCC
regs.

You call HIM "delusional", yet YOU are citing some radio service
that does not exist...Guess this fits right in with your assertion of
radio services that exists "solely for recreational purposes" that you
tried to pawn off on us a year ago.

Still doesn't fir the facts, Sir Putzalot.

> >You're constantly criticizing ARRL without justification, and even accusing
> >them of fraud - again, with no evidence.
>
> Plenty of evidence of hypocrisy, false "representation," no verification
> of their alleged ability to "know what is best for amateur radio."

Absolutely NO evidence has been provided by YOU, despite your
assertions to the contrary.

And we're STILL waiting on your "proof" that the ARRL is
dishonest.

That was yet another LennieLie that's yet to be substantiated.

> >You deny the homebrewing success of others, and the public service
> >contributions of radio amateurs.
>
> I've never "denied it," delusional fellow.
>
> You've never offered proof YOUR wonderful amazing state-of-the-art
> homebrew radios worked...or even existed.

And you've never offered us any proof of YOUR "state-of-the-art"
projects either, Lennie. Whare are they?

> >Quite clear what you would like amateur radio to become, good buddy ;-)
>
> I'm NOT your "good buddy." Haven't you got your eyes in?

You got THAT one right, Lennie...I doubt you are ANYone's "good
buddy".

I know >>I<< wouldn't hang out with an idiot like you.

> >I'm simply pointing out where your many complaining posts lead. If all of the

> >quite like cb. You'd like that, I think.
>
> No, you are just voicing your fantasies and delusions and terrible
> parsimonous pique and not honoring and respecting your noble
> viewpoints.

A lie on your part, Leonard H Anderson.

You've "offered" numerous acidic assertions about Amateur Radio
in general and many licensed Amateurs in particular, yet offer "proof"
on none of them.

> >> You were much better on the pulpit with your old Sermons On
> >> The Antenna Mount.
> >
> >Typical personal insult from Len rather than debating the issue.

How old are YOU in 2003, Lennie. You seem to have the same
problem TODAY.

> >What did YOU do to keep that service from becoming such a wasteland?
>
> Irrelevant. CB has far too many users for too little bandspace.

So we are just going to allow that type of behaviour to run
rampant through the spectrum...?!?!

> What have YOU done to eliminate CB or reduce all that waste?

But...but...but...LENNIE!

YOU are the "radio professional", here! You've been telling us
that all along!

What are YOU doing to make it better?

> YOU seem to know all, be all, yet do nothing of value except
> extoll your own alleged expertise in OLD radio arts.

Whew! Didya get bruised by the door swinging back and smacking
you in the face, Your Putziness?

How many rants have ceneterd over what you did in 1950s era Japan
at a rear area radio relay statuion...?!?!

> >> YOU've had 45 years to correct things.
> >

> >Not my responsibility, Len. I'm not a cb user. Never have been. All I did was
> >listen there, and tune away in disgust.
>
> Poor baby. "Disgust," is it?

Must be, Lennie.

And must be YOU are disgusted, too...You've told us about how
utilitarian CB is, yet I've challenged you to tell us just HOW
"utilitarian" it is by detailing your use of it...

You've not done so.

> >I'm know many cb users are fine people, but the service is a mess, has been
> >for decades, and it was a mistake to have ever been created.
>
> Poor thing. You could have DONE something for the betterment
> of mankind in 45 years, yet you have not...

YOU could have done so for 70+ years, Lennie.

Where are YOU accomplishments? I do not own ONE electronic
device that says "Made Better By LHA" on it.

> >What have YOU done to fix cb?
>
> Irrelevant. What needs to be "fixed?" Restore it to radio amateurs?

Only an idiot would ask "What needs to be "fixed?"" about CB
radio.

Oh...wait...an idiot DID ask what was wrong!

> You can always file a petition with FCC to abolish CB. Go ahead,
> make everyone's day.

Too bad we can't petition them to abolish you, Lennie.

> It might be done some time. It only took 24 years to make the first
> dent in the 40m problem with SW BC interfering with the "rightful
> ownership by hams" there.

And Amateurs will be enjoying that reduced interference even
while you are rotting in the nursing home, Lennie...

Steve, K4YZ

> than you and done far more.

I'm impressed with your PROFESSIONAL status, Len. You've been a
professional in radio longer because your were born earlier. As to
whether you've done more, you have no way of knowing. That said, my
comment was that you aren't a radio amateur. That statement is still
completely accurate.

> Poor baby, got your state department shorts all knotted up?

Why are you interested in my underwear? It would seem, Poor Baby, that
you are upset about not being part of the amateur radio crowd.

> >> >2) Some hams are not in a position to have an HF station

> >
> >So far, you're the only individual making such statements. How would
> >you know? You aren't involved in amateur radio.
>
> I'm not eager to "get involved" with working DX on HF with CW.

I didn't write anything about your eagerness. I wrote that you are the
only person making such statements and I asked how you'd know. You
aren't involved in amateur radio.

> That was done over a half century ago by others.

It was done last night by others. When you write of anything involving
amateur radio, it is all done by others.

> Amateurs, and I use that in its most pejorative appelation, LIKE YOU
> insist on reliving the past so that you can claim "pioneer" status when

I read standard English just fine, Len. Maybe you could start writing
some instead of including phrases which read like the rantings of some
demented homeless person.

> >> >4) Some hams have lost interest completely
> >>
> >> OBVIOUSLY not real hams.
> >
> >As defined by one not remotely involved in ham radio?
>
> As defined by idiots like yourself who only want to attack people,
> not subjects.

You wrote the phrase, Len. I didn't make such a definition so the
sentence above makes no sense.

> Heil, all you have left is Personal Attack of anyone who displeases
> you.

That's your mode, Len. It applies to anyone or any entity not in
agreement with your views.

> Typical dictatorial prussian.

Neither applies to me. Maybe you could uses complete sentences and
communicate what you mean.

> >> The CW skilled all have maximum interest, the only ones in US

>
> YOU wouldn't know "state of the art" in radio if Norman Rockwell
> came back to life and painted portraits of Peter Martinez and Phil
> Karn and Dan Tayloe.

You didn't answer the question.

> YOU are just an AMATEUR in the radio arts, capable of little but
> restoring OLD radios and operating ready-built radios designed by
> professionals.

Then again, you'd have no way of knowing. I am enjoying amateur radio,
though. What steps are you taking to become a part of amateur radio?

> Come back when you've gone beyond Ohm's Law.

I'm not going anywhere.

> >> Were all those just sitting around
> >> waiting for restructuring so they could piss and moan "no-coders
> >> going to do the art advancing?"
> >

> >They were probably getting on the air and operating. What were you
> >doing for those several decades during which you've declared an interest
> >in amateur radio?
>
> WORKING for a living IN radio and electronics, dumbass,doing > PROFESSIONAL work...

Did any of that preclude your taking part in amateur radio? Many,
including myself have found time for both though few of us ever found it
necessary to write "PROFESSIONAL" when describing our work.

> applying for patents and gettin one,

Others here have done the same but have found the time to become
licensed hams. None of them have spent time frequently blowing their
horns about a patent. You have.

> going farther along the EM spectrum in radio communications than is > legal for US
amateurs.

How does that preclude obtaining an amateur license?

> Design engineering, you dumbass, not sitting around
> shoveling bullshit about being some hobbyist in off-hours
> pretending to
> be a radio pioneer and "in the service of your country" by beeping
> morse.

So it appears that your decades-long declared interest in amateur radio
is a sham. Your rambling, disjointed statement shows your lack of
regard for those who are radio amateurs.

> You LOST it Heil.

I lost it? Reread your own rant above.

> You don't have the proper prussian arrogance for
> an oberst anymore. You are demoted to just a feldwebel, a minor-rank
> NCO, in a fantasy life as a United States Morse Codist (USMC).

Just be sure your "insinuations" stay that way, Mr. Burke.

> Do you now understand that I don't have a gun to your head?

Do YOU understand what I have said, Brain?

> Or don't you understand the contraction "don't?"

I understand it fine. As I said...WATCH your insinuations,
Brain.

> > > > You refused to accept the conditions...Anything else is a lie on your part...

> > Lennie's edification, you have nothing to refer to.
> >
> > If THAT is the basis of your rants, sorry to leave you wanting.
>
> Was your military service a lie?

Nope. Care to inquire of the Veteran's Administration? You are
certainly at liberty to do so.

In the mean time, we'll try and find the name of that "military
commander" who allegedly gave you "permission" to operate Amateur
Radio from a UN controlled zone without UN authorization.

We'll even try to find someone who "worked" you from T5...

> > > > Hardly.
> > >

> > The LAST person...
>
> Sounds like a threat, Stebe. Are you threatening me?
>
> I want you to withdraw your threat and apologize.

Thre's no apology to offer, Brain.

I am TELLING you that ANY insinuation of use of firearms on MY
person IS a threat, and that it's the LAST thing you want to do.

Someone else in this forum tried that, and I can tell you that he
found out that my reach exceeds the length of my arms to this
keyboard...And the results were expensive AND quite legal.

> > > > > > Sorry.
> > > > >

> >
> Stebe, you're the one who needs luck and help.

No, Brain...On THIS one I am sure.

Anyone who posts in a public forum that he is "mentored" by a
known pathological liar like Leonard H Anderson and then tries the
wordsmitihing you've tried here in the last few days is a fool.

THAT would be YOU. You stuck your foot in it, Brain, so now YOU
get to wash it off. Sorry if you don't like the texture or smell.

SOMETHING. SOMETHING.

> Go "munch" someone else's shoes, preferrably some CROW
> as dessert.

I'm not the one who took the potshot at amateur radio and the ARRL only
to have it blow up in his face.

> >> Rest of Len's typical ARRL bashing snipped.
> >
> >Hasn't Len made it clear on any number of occasions that he is not
> >anti-ARRL?
>
> ARRL is an EASTERN headquartered organization, more specifically
> in the northeastern USA.

There are many WESTERN headquartered organizations. Is it your opinion
that all organizations should be headquartered near the center of
population? If not, why the fuss?

> ARRL doesn't seem to recognize that
> MOST of the USA lives WEST of the Mississippi...including licensed
> US radio amateurs.

It doesn't seem that way to me. Directors are representative of the
areas in which they live. Why should you be concerned? You aren't
involved with the ARRL.

> I'm not "anti-ARRL."

Your frequent statements about the League would indicate otherwise.
Would you care to see a few of them googled up?

> I'm just showing what they are and what they
> are NOT. What they are NOT is NOT "representing ALL amateurs."

How are you "showing" anything? You aren't involved.

> ARRL is eastern-oriented, almost obsessively so in concentration
> east of the Mississippi. Not my problem. It's ARRL's problem.

No, your errors are your problem. You've gone from making statements
about an EASTERN headquarted organization to stating that the ARRL is
eastern-oriented. You keep trying to make an issue of something which
is not an issue.

> Maybe that's why ARRL membership remains a minority of all
> licensed US radio amateurs (only a quarter).

Only a quarter? What other amateur radio organization has more than a
fraction of that number making up its membership?

> All the ARRL "represents" is its membership...but mostly it is the
> executives and staff and board of directors of the ARRL that is
> represented.

AARP claims to represent retirees. The American Legion claims to
represent veterans. Labor unions claim to represent workers. The NAACP
claims to represent colored people.

> Membership has to fall in line with that or be
> excommunicated.

If those words came from anyone else, I'd say that they were an error.

Cute, Lennie.

Even the "Have you stopped beating your wife" trick can be
defeated.

Come on, Lennie...YOU know how...

> Ah, but there's never any proof. His standard answer is "it's in my
> record" but nobody in here has seen that famous "record."

words".

> The guy who labels others a "liar" claims to have worked on lots of
> military communications equipment but never mentions a single
> detail about it, rationalizing his reasons as "it's all classified..."

Lennie, I've asked this question before, and I'll reiterate it
again...

WHEN have I said ANYthing about what I did as being
"classified"...?!?!

What I HAVE said is that I will not get into this CV silliness
YOU have.

MY USMC MOS is available if you care to look.

The equipment I had to be qualified on in order to hold that MOS
is ALSO available, again if you care to look.

> >> I'll argue the imagination part, Brian. Remeber Stebe's "hostile
> >> actions?" :-)
> >
> >The famous Seven instances of self-abuse?

At least some of us remember what "masturbation" (of ANY kind)
was supposed to accomplish, Lennie.

All those "Viagra" commercials on TV hitting a bit close to home?

> >> Careful, Brian, those are His study books for the Civil Air Patrol.

> the state-of-the-art of amateur technology then.

Ahhhhh....Llennie and Brain back to bashing yet ANOTHER volunteer
organization...Of course Lennie took his shot at CAP and Civil Defense
a couple years ago and never gave an adequate defense of his
assertions THEN, either.

Of course Lennie was never OLD enough to have been a member of
either during the war.

> >Wet or dry? Doesn't matter. He couldn't work the hypsometric

>
> Never mind...too many in here don't have any knowledge of "other"

> radio or meteorology...meteorology other than "putting up a front,"
> that is...

As for "putting up fronts", we have "Lennie The Licenseless"
preaching to us about how Amateur Radio SHOULD be, from the comfort of
never having to be concerned withe the consequences of his meddling.

Oh..And yes...About how aerial navigation is taught and employed
without the benefit of a valid Airman's Certificate...Oh yes...He DID
fly a few ours as a student pilot in the 50's...

As a matter of fact, seems ALL of Lennie's "experience" comes
from the fifties...Kinda like his "parenting" experience from which he
has suggested that an age limit should be enacted in Amateur
Radio...No doubt from his exposure to Marlon Brando in biker regalia,
tearing up Southern California...

Still hasn't provided us with his credentials in THAT
venue...Seems anyone who had successfuly raised offspring would be
anxious to tell us of thier child rearing days...

Yet ANOTHER unanswered LennieRant...

Salaries are going up. Buying power for consumer items is up. TV's,
VCR's, DVD players, computers, microwave ovens and the like are dirt
cheap. Ham gear, in terms of hours worked to purchase it, is extremely
inexpensive. Houses cost more but are generally much larger than in the
past.

>
> Americans working at those jobs would do the same things (pay taxes and so
> on), Dave.

Do some research on the number of retirees and the number of workers
paying taxes to support those retirees.

> Why do we need immigrants to do that?

Because there aren't enough Americans born to do it.

> Some of those Americans are
> even bright.

...and some aren't. Having been back in the U.S. for about 3 1/2 years,
I've encountered quite a number who just aren't that bright.

> As for the "menial" jobs, the only reason those jobs are menial
> is because employers choose not to pay decent wages to do those jobs.

No, that isn't correct. Moving dirt is menial work. Lifting boxes is
menial. Clerking at a convenience store is menial. Employers choose
not to pay folks in those positions more than the jobs are worth.

> And as
> long as employers continue to find cheap labor to fill those jobs, there is
> no incentitive whatsoever to increase those wages. If anything, a ready
> supply of cheap labor only drives down wages for other jobs, increasing the
> number of menial jobs and decreasing jobs that pay decent wages. The direct
> result is less well paying jobs for all working class Americans.

So let's all make 30 bucks per hour and then wonder why the cost of
everything skyrockets, huh? Americans want good pay and they want the
price of everything to be dirt cheap. Tell us how to achieve both of
those. Then explain why everything wrong with our economy can be laid
at the feet of black, hispanic or Asian immigrants.

> > I hadn't realized the extent of your racist views, Dwight.

> > who live in harmony with blacks. (snip)
>
> A few exceptions don't change the rule, Dave.

What "few exceptions"? I wrote of thousands of whites in four African
countries.

> With the exception of South
> Africa, there are few countries in Africa where large numbers of whites work
> in government, the military, or in black owned businesses.

I submit that you don't know what you're talking about. In many cases,
the whites build or operate a business employing hundreds of Africans in
all kinds of jobs.

> In South Africa,
> whites (the minority) were loudly criticized for taking jobs, money, and
> power, away from blacks (the majority).

Poppycock! For taking which jobs were whites criticized? For taking
what money were whites criticized?

> The people leveling that criticism
> were not called racist - only those in the majority here are called > racist
> for saying such things.

You're making this stuff up.

>After blacks gained control of the South > African
> government, white employees were routinely replaced with blacks >throughout
> the country.

That statement just isn't true.

There was no criticism of this. After all, since South Africa
> belonged to the blacks (the majority), they should obviously have the jobs,
> money, and power. Of course, if a white (the majority) says that here, it is
> immediately called racism.

There are large numbers of white-owned businesses and farms in South
Africa. The white owners provide jobs for blacks. No one in South
Africa seems poised to change that and to do a full "Robert Mugabe" ala
Zimbabwe.

> Clearly, there is an absurd double-standard when
> it comes to the words "racism" and "racist."

...or there is a clear misunderstanding of what is taking place in
Africa (both inside and outside of your only example, South Africa) by
you.

Could be Dave, but I think not. Lennie does a great job of showing how
silly he is all by himself.

He must be a lonely old man. With nothing to do in life but wait around to
die. And in the meantime annoy as many folks as possible.

He obviously hates ham radio. Probably because his 'higher' in the military
was a ham and made Lennie look silly......you think so?

Not at all. It's the sum total of what you've been preaching here for
years and years. It explains the motive behind every single post
you've made here.

> > >You rail against "rank, status and privilege", and you make it clear you want
> > >one class of license, or no licenses at all.
> >
> > I've never been for "no license at all."

That's why I wrote: "one class of license, or no licenses at all".

So you want one class of license - just like cb used to have.

> > >You're against any sort of standards, values, or traditions in amateur radio.
> >
> > I'm not interested in the standards, values or traditions of the
> > Archaic Radiotelegraphy Service.

What is the "Archaic Radiotelegraphy Service"?

You obviously don't want any sort of standards, values, or traditions
in amateur radio - again, just like cb.
>
> > >You're constantly criticizing ARRL without justification, and even accusing
> > >them of fraud - again, with no evidence.
> >
> > Plenty of evidence of hypocrisy, false "representation," no verification
> > of their alleged ability to "know what is best for amateur radio."

You have presented no evidence of any of that, just League-bashing
based on your obvious desire for amateur to be without a strong

national organization. Cb never had a strong national organization....
>
> >You deny the homebrewing success of others, and the public service
> >contributions of radio amateurs.
>
> I've never "denied it," delusional fellow.

Yes, you have. When you repeatedly tell untruths about others' projects, even when corrected, that's denial. Or lying - take your pick.
>
> You've never offered proof YOUR wonderful amazing state-of-the-art
> homebrew radios worked...or even existed.

You'll just have to take my word for it, Len. Besides, you've made it quite clear that you would reject any "proof" offered by anyone.

And I've never claimed that any of my homebrew projects were "amazing" or "state-of-the-art".

Cb did not allow its users to homebrew legally.

> >Quite clear what you would like amateur radio to become, good buddy ;-)
>
> I'm NOT your "good buddy." Haven't you got your eyes in?

Y'know, Len, with that attitude you're not anyone's good buddy.

> >I'm simply pointing out where your many complaining posts lead. If all of the
> >things you complain about were eliminated from amateur radio, it would become
> >quite like cb. You'd like that, I think.
>
> No,

Yes. It's what you obviously want amateur radio to become. One license class, no homebrewing, no standards, values or traditions, no strong national organization, no public service.....
>
> >Not much. But by the time I became aware of it, I was repelled by the immature
> >behavior of some of the users there.
>
> How old were you in 1958?

Figure it out. Oh wait, you couldn't remember how old you were in 1948, nor what screen names you've used in rrap.

> How "mature" were you that you could "judge" others?

I didn't encounter cb until about 1965. And I found the on-air behavior of those involved to be extremely immature. I was mature enough to know I wanted no part of what I heard on the cb channels. So I just left it alone.

Who are you to judge others, Len? You don't act very mature in here.
In fact, you act here just like the classic schoolyard bully in search
of attention. Why?

> >What did YOU do to keep that service from becoming such a wasteland?
>
> Irrelevant.

It's very relevant. You are, or were, a cb user, weren't you?

> CB has far too many users for too little bandspace.

So it's not their fault? What about personal responsibility for ones'
actions? I guess you reject that, too. "Oh, there aren't enough
channels, so I'll break all the rules..."

> What have YOU done to eliminate CB or reduce all that waste?

Not my concern. I've never been a cb user. As long as those folks
don't have a negative affect on amateur radio, I really don't care
what they do on their channels.

And I've never said I wanted to eliminate cb.

> YOU seem to know all, be all, yet do nothing of value except
> extoll your own alleged expertise in OLD radio arts.

Len, you just described yourself perfectly.
>
> >> YOU've had 45 years to correct things.
> >

> >listen there, and tune away in disgust.
>
> Poor baby. "Disgust," is it? :-)

Yep. Disgust.

> >I'm know many cb users are fine people, but the service is a mess, has been
> >for decades, and it was a mistake to have ever been created.
>
> Poor thing. You could have DONE something for the betterment
> of mankind in 45 years, yet you have not...

Not my concern, Len.

> >What have YOU done to fix cb?
>
> Irrelevant.

In this case, I think you're saying "nothing".

>What needs to be "fixed?"

Simple - just have the users follow the rules.

> Restore it to radio amateurs?

That wouldn't fix it.

> You can always file a petition with FCC to abolish CB. Go ahead,
> make everyone's day. :-)

Not my concern. Amateur radio is my interest, not cb.

The fact is that the cb mess is partly *your* fault, Len. You have loudly proclaimed your status as a "PROFESSIONAL IN RADIO!!!!!!!!!!!" here many, many, many times.

Yet the reason FCC created Class C and Class D (27 MHz) cb was because Class A and Class B (UHF) cb weren't getting many users, due in large part to lack of suitable manufactured equipment.

The "PROFESSIONALS IN RADIO!!!!!!!!!!!" couldn't figure out how to build inexpensive UHF cb radio sets back in the '50s, so FCC created the 27 MHz version. You "PROFESSIONALS IN RADIO!!!!!!!!!!!" figured out how to make inexpensive 27 MHz sets. I've seen the schematics of those sets - they weren't "state of the art" 20 years before they were manufactured. But you "PROFESSIONALS IN RADIO!!!!!!!!!!!" made them, so the users bought them. And misused them. The rest is history.

It wasn't hams who made a mess of 11 meters. It was "PROFESSIONALS IN RADIO!!!!!!!!!!!" like you, Len. Now you want to do the same thing to amateur radio. No thanks.
>
> It might be done some time. It only took 24 years to make the first
> dent in the 40m problem with SW BC interfering with the "rightful
> ownership by hams" there. :-)

You can't even get the history of that problem right, Len.

Not at all, Dwight.

I say that slavery was the main cause - not the only cause. It was at
the root of many of the other causes.

> At the
> same time, you've pointed your finger at everyone else (the South, the
> founders, and just about anyone else you can think of) while ignoring or
> downplaying your own State's involvement in the slave trade.

Not at all, Dwight.

I've pointed out that by compromising with evil, the North enabled
slavery to flourish in the South. A Northern mill town might have no
slaves and decry the existence of slavery in the South - and then
proceed to use cotton grown by slaves.

> Above, you said
> the North rejected slavery.

Yep, they did, at various times and in various ways.

> In another message, you said they did so before
> they were forced to do so. Both are true.

There you are.

> years before the Civil War. Seems like your State got out of the slave trade
> just in the nick of time - just in the nick of time for you to look down
> your nose at others today.

Where am I "looking down my nose" at anyone by condemning slavery?

Slavery in Pennsylvania was "gradually abolished" in 1780. This meant
that some slaves were not freed - see the above website for a detailed
explanation of how the Act worked. It, too, was a compromise with
evil.

But it did not take a war or outside intervention to get the Act
approved. And from the day the Act was in place, the number of slaves
in Pennsylvania dwindled until in 1842 there were no more. Meanwhile,
the slave population in many of the states who seceded was growing.

Do you think there's no moral difference in those two cases?

> > > Only if you ignore indentured, bound, or apprentice,
> > > workers in the North.
> >
> > Those were not slaves.

> It was simply slavery by a different name.

No, it wasn't.

Dwight,

You have a vivid imagination, but it's damned distorted! Since I haven't stated my position, whatever you "see" is something that you're making up on the fly. (In short, you don't have a clue.)

To save you the effort of further imagining, here is my position in three words.

"Race is irrelevant."

You seem to place great emphasis on race/ethnic background; ipso facto, you're a racist.

With all kind wishes,

de Hans, K0HB

Wrong. You are still in the delusion of living in PAST standards
and practices of amateur radio. Anything against your fraternal-
order idea of amateur radio is labeled by you as "wrong" or some
evil personified by Citizens Band Radio Service.

The FCC is not required to sanctify or regulate a fraternal order
as ordained by the ARRL. That is your fantasy and delusion.

Citizens Band Radio Service has been in existance for longer
than 45 years and several private land mobile radio services (now
collected under PLMRS) have been in existance longer than that.
Times have changed. ARRL can no longer assume guardianship
over US amateur radio service as it did before Internet and improved
citizen ability to communicate directly with the FCC. The OTHER
U.S. radio services have changed and adapted to modern times.

Why do you NEED all thsoe "classes" in an a voluntary, avocational
recreational radio activity? Is it just to give yourself an elitist "title
of nobility" to "sign" behind your name (or in lieu of it)? Do you
NEED the artificiality of class-distinction to "prove" yourself to the
world...or to prove you are "better" than others...so that you can
feel justified in putting down others?

It would seem that you DO have such a NEED.

I find all of radio and electronics in general to be a fascinating area of technology, so much so that I became a hobbyist in that a long time ago and made it my life's work...even though experienced and with an aptitude for a totally different kind of work. But, you and other "titled," self-important radio amateurs want to put that down, stoutly maintaining an absolute rigidity to the artificiality of rank, status, privilege AS IF amateur radio were the SAME as a guild or union. Everyone (according to yourself) MUST follow the "rules," not the regulations, but the "rules" as laid down by one membership organization which still is just a minority "representative" political action entity.

Do not deny that ARRL is a political-interest group. Their federal tax returns are evidence that they retain a lobbying service in DC as well as a law firm. They are NOT a government entity, just a large fraternal order that survives on publication and product resale and advertising profits. ARRL deludes you and others into thinking they are always "representative" of radio amateurs...but over the years of successful brainwashing through self-promotion, they remain a minority political entity on "representation."

You will not accept such a minority status yet it is obvious reality. The FCC has recognized this some time ago but you still support defend and sometimes "fight" for the ARRL on matters and blame the FCC for your perceived "evils" while turning hypocritical and extoling the ARRL as "doing the right thing" when decisions align themselves with your ARRL-influenced personal opinions.

Case in point: As of the close of 28 October 2003, the FCC ECFS had a total of 3,877 comments on 14 petitions for regulation changes on retention (7) or elimination (7) of the morse code test for U.S. amateur radio. Comments were from all over the nation, individuals to groups, licensed and unlicensed in amateur radio. There is far more access and FREEDOM for all citizens to make our grievances known to our government...directly if we desire, not having to use a "middleman" group to do our collective communications...a "middleman" that pretends to be "representative for all" yet is not, by all evidence, representative to any but a small coterie within that organization.

You desire to have such commentary CLOSED to any but the elite already-licensed. Such is against the very basic First Amendement to the United States Constitution. The FCC is not obligated in any way to sanctify its regulations in the maintenance of an essentially private fraternal order. Yet you insist that this "fraternal order" MUST be maintained. Others insist more fervently, ready to fight at all costs. Such a "must" is delusional, fantasyland imagining.

Amateur radio is a voluntary, avocational, recreational activity done for no pecuniary reason. A hobby. Fun. But some want to rule, to regulate the "fun" solely for their self-interests. Not technical

regulations but the activity itself and this strange absolute NEED to be just like a professional service group with rigid adherence to activity rules, jargon, even paper forms ("official" radiogram blanks). This strange NEED for rigid adherence extends to absolute honoring of tradition AND an intolerance to anything new that threatens the perceived glory and honor of any tradition or its history. All who have any interest whatsoever MUST be licensed to the imaginary "dedication and committment to the ARS community."

All who refuse to Believe in such a fantasy are heretics, lesser humans, worthy of contempt by the self-perceived nobility...as evidenced by all the archives in the Google.

The first message of this particular thread started off with an emotion-loaded play to readers of a father (authority figure) that was supposed to uphold tradition, honor, glory, etc. as a "positive attribute" or "family value" to pass along to generations. Over morse code proficiency that has been dropped or never considered by every other radio service? That's fantasy, delusional thinking, suitable only for fraternal orders looking for status quo stability.

My father and father-in-law would no doubt have great fun at such "important family values" to pass on had they been alive today. They were both born a year before the first radio signals crossed the Atlantic and three years before the Wright brothers successfully flew a heavier-than-air vehicle...and both saw the first humans set foot on the moon by live television from a quarter million miles away.

Change happened in their lifetimes. Great, profound changes. Change will continue to happen in many things and in many lives. We can all adapt and meld with the future, become part of it, or remain in the past in a fantasyland of old things, old ideas, old standards, old skills that no longer apply to the majority living in reality.

I am for the now, the future, reality and freedom. I will not live in your delusional fantasyland. Neither will millions of others.

Tsk, tsk, tsk, you have to quit renting tapes of "Exorcist,"
ancient mariner. :-)

"Independence Day" is more your style. :-)

>ARRL is in fact very California-centric.
>
>There are more W6 ARRL members than any other call area.
>Two of the fifteen ARRL Divisions are in California.
>Ten of the seventy ARRL Sections are in California.

Ancient mariner, the ARRL Internet pages originate in the
northeast corner of the USA, diagonally oppoite California.
They couldn't be any more anti-west if they tried.

There are more licensed radio amateurs in California than
any other state because there are more US citizens in
California than any other state (one out of eight
Americans live here). The Pacific states are the center for
U. S. aerospace and electronics. "Silicon Valley" didn't
arise out any need for improved morse proficiency in radio.
Tektronix didn't start up to show RF envelopes to amateurs
and Bill Hewlett and Dave Packard started their place to
make good electronic instruments...for laboratories...only
much later did H-P evolve to more things.

Good luck on your study of voice-modulated spark
transmitters.

Yes. True. I went to the FDA and they could only certify me as
beef. :-)

I traveled 85 miles by rail to Chicago back in '56 (no snow that
March, kept my shoes on, no significant hills) and took a REAL
test ONCE. At an FCC field office in the Federal Building there.
Passed a First Phone test in one session. Only one of the four
parts of the test was multiple choice.

I'd send you a digitized image of that first First Phone license if
you had a real Internet address. But, you have no identity.

Not mine. Some, yes. Never had any problems with FBI, IRS, etc.
on any government agency corroborations of past service records.

Tsk, tsk, tsk, you should read ALL the pages at NARA's website,
not just the headlines.

Give yourself another title again.

So...you are saying that ALL amateur radio information is always
late?

Whatever happened to the National Traffic System? You know,
those dittyboppers still thinking that "CW" is the bestest thing
since sliced bread?

CNN, Fox, MSNBC, CBS, NBC, ABC are covering the California
Firestorms in real time, "live" as you civilian non-broadcasters
call it. Have ANY of those TV news services "covered" anything of
amateur radio emergency/disaster teams heroically working to
aid the public? When and where did they "work" that scene?

Feel free to report all tha news in a month, long after containment.

>Not like CNN, which I am SURE you watch, that makes it up as
>they go.

17 dead, over 1500 homes destroyed, over a million acres burned
(over 800 square miles), over $2 Billion in damages, and firestorms
are still raging in two major areas. One of NBC's remote vans got
caught in the fire and destroyed, crew (Chuck Henry at the mike)
saved by a fire crew. Live, on-air courtesy of another TV crew.

Hardly "making it up as they go along."

...and all you can do is mean-mouth individuals that don't love,
honor, and cherish morsemanship?

A review of any U.S. amateur radio periodical of the past half
century will show photographs that U.S. amateur radio
licensees are essentially white and male.

Ergo, U. S. amateur radio is racist? :-)

Poor Poor Lennie, he is getting worse and worse. He fails to comprehend that professional news reporters get paid, and by golly, its their job.

The ARRL is more interested in compilling the events and accuratly reporting the information to the amateur community. Not you Lennie, since you not a licensed operator.

And of course the ham operators are not in the news. They hardly ever are. Real emergency operators don't seek publicity. They are there to do a job and don't have time for talking with paid reporters. They are much too busy trying to save lives.

As for your 'swipe' at the National Traffic System. It is fine and going strong Lennie. I operate both SSB and CW sessions on a nightly basis. Not to mention my Military Affiliate Radio System networks.

Tell me Lennie....what do you contribute to your community and nation?

Accuracy is not one of Lennie's prefered traits. Being accurate
meand ruining his rants, and he can't have that!

> > Poor baby, got your state department shorts all knotted up?
>
> Why are you interested in my underwear? It would seem, Poor Baby, that
> you are upset about not being part of the amateur radio crowd.

He's REALLY upset that we do, WHAT we do and HOW we do it better
and without his "leadership".

Of course if we all followed Lennie's style of "leadership", we'd
be sucking on "Flavor-Ade" in a South American jungle commune.

> > >> >2) Some hams are not in a position to have an HF station

> communicate what you mean.

Lennie refers to Dave's observations as "Personal Attack"
(capitalized, as if a formal program), yet in that exchage Lennie
refered to Dave as a "dumbass", and "idiot", and a "dictatorial
prussian".

Wonder how Lennie will defend THAT conduct.

> > I can't get inside minds to find out how

Gee...I thought "dumbass", "idiot", "dictatorial prussion" and
"prissy Parson" were all accepted terms in civil debate, Dave...You
mean they AREN'T...?!?!

> > >They were probably getting on the air and operating. What were you
> > >doing for those several decades during which you've declared an interest
> > >in amateur radio?
> >
> > WORKING for a living IN radio and electronics, dumbass,doing > PROFESSIONAL work...

Using profanity in the conduct of "civil debate" is
"professional"...?!?!

> Did any of that preclude your taking part in amateur radio? Many,
> including myself have found time for both though few of us ever found it
> necessary to write "PROFESSIONAL" when describing our work.

Usually people who have to add those adjectives themselves have
some sort of perception of failure.

They are usually right.

> > applying for patents and gettin one,
>
> Others here have done the same but have found the time to become
> licensed hams. None of them have spent time frequently blowing their
> horns about a patent. You have.

A lady friend of mine obtained a patent for a propoese new-style
flower urn for grave markers that wouldn't overturn.

Took her an hour drawing her idea and $700 for the patent
attorney.

I have a patent pending for a device which will help to reduce
the incident of urinary tract infections in debilitated, diaper
wearing patients.

Can I crow like a rooster and use profanity to get my point
across if a patent is issued to ME...?!?!

> > going farther along the EM spectrum in radio communications than is > legal for US
amateurs.
>
> How does that preclude obtaining an amateur license?

It doesn't. Just more fodder for Lennie's rhetoric cannon.

> > Design engineering, you dumbass, not sitting around
> > shoveling bullshit about being some hobbyist in off-hours
> > pretending to
> > be a radio pioneer and "in the service of your country" by beeping
> > morse.
>
> So it appears that your decades-long declared interest in amateur radio
> is a sham. Your rambling, disjointed statement shows your lack of
> regard for those who are radio amateurs.

Not to mention an overwhelming lack of SELF respect for himself,
since he at once claims to be a "professional", interested solely in
"civil debate" of the code test issue, but then spins his wheels
making these obvioulsy infalmmatory personal attacked laced with
profanity and mistruths.

> > You LOST it Heil.
>
> I lost it? Reread your own rant above.
>
> > You don't have the proper prussian arrogance for

There never was an insinuation, Mr. Robeson. It was a case of your
misunderstanding and a dose of your wishful thinking.

> > Do you now understand that I don't have a gun to your head?

Apparently you don't. See next line.

As I said...WATCH your insinuations,
> Brain.

And I said WATCH your misunderstandings and wishful thoughts, Stebe.

There should be. Why do you assume yourself to being above making
mistakes, such as the one you made above?

> I am TELLING you that ANY insinuation of use of firearms on MY
> person IS a threat, and that it's the LAST thing you want to do.

I am telling you that there was no insinuation except in your capacity
to comprehend. And I still read a threat in your latest reply.

Now move on to your apology.

> Someone else in this forum tried that, and I can tell you that he
> found out that my reach exceeds the length of my arms to this
> keyboard...And the results were expensive AND quite legal.

I am not someone else in this forum.

Meanwhile, I still read a threat in your response.

Now move on to your apology.

Dwight, I don't know how it is where you are, but here there is no one
willing to do the work a lot of our immigrant population are willing to
do--and do.

I remember many times asking my teen-aged son to go get a job and, when he'd retort with, "there aren't any jobs," I would mention some of the things I knew were avaiable: farm work (building fences, etc.); any fast food chain, stock clerk, etc. He was indignant, at best, when he thought his mother would suggest such a thing to her own son...that was not work he was about to go do.

Now, I meet adults with the same attitude. I am very thankful for that part of my community with people who are willing to take on the immense task of the "physical labor" jobs that many of us wouldn't be caught doing. Very thankful indeed, for no one else would do them.

I don't think that your previously archived comments might be
read that way.

For an offense to have occured, it onl;y requires that it be
perceived as such.

Personally, I think you were just pushing the limits of how
offensive you could be and still get away with it.

It didn't work.

> > Thre's no apology to offer, Brain.
>
> There should be. Why do you assume yourself to being above making
> mistakes, such as the one you made above?

As I pointed out, in order for an offense to have occured, the
person only need have PERCEIVED that a threat was rendered.

I have warned you off, but you keep barrelling right on in.

Were you born an idiot, or was this a life-long achievement?

> > I am TELLING you that ANY insinuation of use of firearms on MY
> > person IS a threat, and that it's the LAST thing you want to do.

No threat. A warning. A thrat implies a violent, illegal
response. Trust me, if you keep this up, the result will be anything
BUT illegal...And expensive I might add.

> Now move on to your apology.

None will follow, unless YOU would care to express one for
uttering language that was perceived as a suggestion that you might
hold a gun to one's head, Brain.

And incase the last few hints didn't hit home with you, I suggest
you discuss with legal representation of your choice what can be
perceived as a threat.

> > Someone else in this forum tried that, and I can tell you that he
> > found out that my reach exceeds the length of my arms to this
> > keyboard...And the results were expensive AND quite legal.
>
> I am not someone else in this forum.

But you MIGHT be someone NEXT, Brain.

> Meanwhile, I still read a threat in your response.

A warning. I perceive your references to the holding of a gun to
my head as a threat. If you meant it any other way you may, in the
next response to this thread, express a retraction of that statement
and an apology for the anxiety it caused.

Otherwise I will assume your intent WAS to cause it, and I can
proceed accordingly if you insist.

> Now move on to your apology.

What apology?

> > No, Brain...On THIS one I am sure.
>
> The fool is always so sure, especially when they're wrong.

And in this case when he refuses to admit that he uttered words
that were percieved as threatening and offensive.

Which would be you...

> Gunny, you need to move on to your apology.

What apology?

>Assholes belong together.

Lennie, is there a special "professional engineers only" course
on "civil debate" techniques that you went to?

Is this the type of conduct that rates one a "life membership" in
the IEEE? If we were to send a compendium of "Len Over 21" postings to
your claimed friends, would what they say?

For the life of me, I've never seen anyone call YOU an "asshole",
yet you seem to like to roll out those types of epithets all-the-while
accusing Amateur Radio operators who annoy you of "personal attacks".

I have PARTICULARLY noticed that you make liberal use of this
term (amongst other profanity) against people who do NOT do the same
to you, ie: Dave Heil and Jim Miccolis.

Are the "rules" different for "professional engineers"...?!?!
You certainly take GREAT offense at any suggestion of a "perjorative"
employed against you.

I understand your conduct against me. YOU called me a Nazi,
among other things, and I threw it back in your face and refuse to
back down. I have offered to cool the jets before, only to have you
throw it back in my face, so WE (yes...the ROYAL "we"...) understand
that you are a "Do What I Say, Not Do What I Do" type person.

But you then state that you are only here for "civil debate" of a
subject which you have stated expresses absolutely no interest to you,
but then when somone DOES "engage" you, you roll out the profanity and
childish insults.

Is that what it takes for you to understand a conversation?

Are you SO old that you've regressed to that "second childhood"
stage, and you are determined to have the sand box all to yourself?

Personally, I just think you're a creep, but then opinions vary.

But so far, you've not done anything to change mine.

Actually I wanted to specifically say cordless phone, because college policies also apply to any student living in a campus dorm.

Here is a link to GaTech's wireless policy.
http://www.oit.gatech.edu/inside_oit/policies_and_plans/policies/Wireless_Network_Usage_Policy_Rev1.9.cfm

They are doing two thing I don't agree with:
1) Banning wireless devices based on interference with their wireless network.
2) Giving themselves the right to regulate all wireless devices on campus property.

>League!

This issue has been kicking around the ARRL Pacific Division "cabinet" for almost 15 years that I know of (I was in same until 4 years ago). The problem is that the Postal Service wants a big hunk of money for air mail to individual subscribers - the League would have to assess a healthy surcharge to Pacific Section members to make up the difference. You don't want that sort of "special treatment".

Conversely, contracting bulk-shipping and local mailing out to a third party is not cheap either - same surcharge problem, same "you don't want to have to pay it".

The third option that major periodicals take is to electronically ship the copy to Honolulu and print it there. That works only for large volume - not for the several thousand ARRL members in the Section.

I wish there was a better solution.

The glories of living in Paradise, eh?

You may not agree with them, but they are certainly within their
rights to regulate the use of electronic devices on their property
as a condition of allowing you to enter upon and use their property.

Did I say "THEIR" property enough ? <ggg>

Several of my law clients are radio site owners, and we put similar
clauses in all the leases.

Don't like it? Get off the property. No one is forcing you to be
there and to use those electronic devices.

You only say that because I'm white. If that were not the case, you'd be saying the same thing to Condoleezza Rice (Nat, Sec, Advisor), Colin Powell (Sec, of State), Jesse Jackson, Al Sharpton, Mary Berry (Chair, US Com. on Civil Rights), and a very long list of other minorities who think race and race issues are very relevant in this country. Why should it be any less so for whites? In reality, your open criticism of whites who talk about race, without criticism of other races who do the same, only demonstrates your own racism towards other whites.

What you fail to point out is how much those retirees paid into the system over several decades of their lives to help support their own retirement, only to have the government now say their isn't any money available because it was spent on something else. The problem isn't the number of retirees - it's the spending habits of this government. Now it's time for this government to put that money back by cutting some of today's spending (a few less military weapons should do it) instead of supposedly trying to gather more people to collect taxes from.

> No, that isn't correct. Moving dirt is menial work. Lifting
> boxes is menial. Clerking at a convenience store is menial.
> Employers choose not to pay folks in those positions more
> than the jobs are worth.

And, by having a ready supply of cheap labor to fill those jobs, employers ensure those jobs are not worth much. Employment and wages are simply matters of supply and demand, Dave. By creating a glut in the workforce, employers are able to pay less wages and still find employees to fill those jobs. After all, people have to work to survive and employers know it. Today, while business profits are astronomically high, working families are struggling to pay bills and cover their massive debts (while those business owners buy yachts and huge homes for their families). And now, to add insult to injury, those employers financially support political candidates that will pass legislation to enable millions of immigrants to enter the country, creating an even larger glut in the workforce so business can pay even less wages and make even higher profits. And if anyone objects to this massive immigration, they're called racist. You can call me racist all you want - it certainly isn't going to stop me from speaking out against this nonsense.

> So let's all make 30 bucks per hour and then wonder why
> the cost of everything skyrockets, huh? Americans want
> good pay and they want the price of everything to be dirt

> cheap. Tell us how to achieve both of those. (snip)

They've done it in other places around the world. Europeans make decent wages, pay no more taxes than here (when you add in ALL our taxes - local, state, federal, and so on), and consumer goods are not that much more expensive then here (gas prices in Europe are high solely because of government efforts to control pollution). They've done the same in the wealthy countries of Asia. Why is it so impossible for this great country to do what other countries have already done - provide decent wages for workers, provide decent (not astronomical) profits for business, and keep market prices reasonable?

All by yourself - or were there over 700 other personnel at that installation?

> I got my first radio operator license from a single test at
> an FCC field office in Chicago in March, 1956 (First Class
> Radiotelephone).

That's nice, Len. But it has nothing to do with amateur radio. As you say of others "You live in the past too much"

> I've never had, or tried to get, any amateur radio license.

On January 19, 2000, you proclaimed here that you 'were going for Extra right out of the box'. But you didn't say when, and in the ~46 months since then you haven't done it.

> Mostly because I've been a professional in radio-electronics for a half
> century.
>
Then why are you so interested in amateur radio policy? Everyone is allowed to be interested, of course, but it seems very odd that someone who has been "a professional in radio-electronics for a half century" and who makes so many posts to this amateur radio newsgroup would not have gotten a license and set up an amateur station in all that time.

> You know what? The FCC doesn't require any commissioners or
> staff to have amateur radio licenses in order to MAKE regulations
> concerning amateur radio. How about that!?

You've never worked for the FCC in any capacity, Len. You've never been a lawyer or a "regulator".

> You want my mailing address? Look in the FCC ECFS for the 14
> petitions for and against amateur radio code testing. You will find
> my name and address and comments in there, at least two documents

> per RM.

And if you try to read all of Len's verbiage, you'll need a bit of time, because most of his 'documents' are 14 to 20 pages long. Total commentary, most of it highly repititious, runs to several hundred pages.

Now of course anyone can flood the FCC with comments, but such wordiness is counterproductive. Some poor soul at FCC has to read all that stuff.
>
> Insufficient courage to reveal your identity "JJ?" Or are you going
> to rationalize your gutless fear somehow?
>
Maybe sufficient sense to avoid being harassed by you, Len. Like the time you sent me several unsolicited emails with very large attachments. Others received the same emails. I didn't bother to waste the connection time and disk space to download them, but others tell me that at least one of them was a picture of a naked man - fortunately not facing the camera. You thought it was "funny". Others did not.

Lets see, we can have an all black mayors conference, but just listen to
the uproar from all the Jesse Jackson idiots if we tried to have an all
white mayors conference. We can have a Miss Black America contest but
what a howl there would be if we attempted to have a Miss White America
contest. Yea Hans, it is just the whites that are racist.

Yes, Lenover, it does.

> Oh, yes, the receiver's Local Oscillator "transmits" a
> picayune picoWatt or so...

And much more than the picayunish oscillator leakage you allude to (if the receiver is even so crude as to have an actual Local Oscillator)......

As soon as a cell phone is powered up it immediately establishes radio communications with the MTSO over the control channel, comparing SID's, negotiating a registration request, and other similar housekeeping chores. This radio communications occurs even if you never actually place an outgoing call or recieve an incoming call.

Sunuvagun!

With all kind wishes,

Lucky I failed to point that out because it simply isn't true. When
Social Security began, where did the money to pay retirees of its early
years come from? It didn't come from those folks because they never
paid much in. It came in advance from the coffers of government. What
was paid in by early workers covered under Social Security went to pay
for the retirement of future workers. Social Security was never, by the
way, designed to be a full retirement package. It was designed to
supplement what a worker saved.

> The problem isn't the number of retirees -

You've got a problem comprehending simple math. There are too few
workers contributing to the system and too many retirees drawing from
it.

> > No, that isn't correct. Moving dirt is menial work. Lifting

Everybody wants high wages for any kind of work. High wages lead to
high prices for products and services. Yet no one wants to pay higher
prices for products and services because that would make their wages
worth less. Your stuck in an endless loop, Dwight.

> After all, people have to work to survive and employers know it.

...and workers know it.

> Today, while business profits are astronomically high, working families are

You're painting that picture from imagination, Dwight. I have a cousin
who owns a small town pharmacy which employs three people other than
himself. He has yet to buy his yacht and huge home but he has been in
business for almost twenty years. There is a fellow here in town who
owns a hardware store who will close it and retire next year because he
can find no one who will buy the business. He has no huge home and no
yacht. He has managed to make a living for some decades.

> And now, to add insult

Both the Democrats and Republicans support continued immigration because
they can read the writing on the wall.

> And if anyone objects to this massive
> immigration, they're called racist.

Only if in objecting they raise an alarm only over Hispanic, Asian and
African immigrants.

> You can call me racist all you want - it
> certainly isn't going to stop me from speaking out against this nonsense.

You can be a racist all you want. That isn't going to stop me from
calling you one.

Those holes in your knowledge base are gaping ones. My wife worked on the local economy in Finland in the mid-1990's. She paid 42% of her income in income tax. Her overtime was taxed at 50%. We paid 21% in Value Added Tax on most items and 17% VAT on food items.

We just got back from a trip to Finland. The same dishwashing liquid we buy here is double the price there. A 1.5 liter Pepsi sells for the price we pay for 3 liters. A half liter bottle of Scotch sells for $13.00 A tiny washing machine which would hold no more than half what our American machine holds runs $500. A mixed drink in the average bar runs ten bucks while a half liter beer will set you back about four clams. The cheapest car on the market, a Russian Lada (a Fiat clone) is $20,000. Gasoline prices are about $4.50 per gallon, not because of intent to reduce pollution but because a) Finland imports 100% of its petroleum and b) the Finnish government charges high additional taxes. Now, I'll entertain additional lectures from you on how the Europeans do things.

Part 15 allows this as well, though I guess one could debate whether
this qualifies as a "radio service":

Sec. 15.23 Home-built devices.

(a) Equipment authorization is not required for devices that are not
marketed, are not constructed from a kit, and are built in quantities of
five or less for personal use.
(b) It is recognized that the individual builder of home-built
equipment may not possess the means to perform the measurements for
determining compliance with the regulations. In this case, the builder
is expected to employ good engineering practices to meet the specified
technical standards to the greatest extent practicable. The provisions
of Sec. 15.5 apply to this equipment.

You really need to study up on Social Security, Dave. You have to pay so much into the system before you're eligible to collect a dime. When Social Security first started, people were not able to collect for several years (how many years depended on how much they were able to pay into the system each year). With the additional interest from that money, the system was supposed to pay for itself. Of course, there was no interest after the money was spent elsewhere.

> You've got a problem comprehending simple math.
> There are too few workers contributing to the system
> and too many retirees drawing from it.

Oh, I understand math very well. You just don't understand the Social Security system, which is why your math is flawed.

> Everybody wants high wages for any kind of work.
> High wages lead to high prices for products and
> services. (snip)

Nobody, other than you, is talking about "high" wages, Dave. What I'm talking about is "decent" wages that have not been artificially reduced by a created workforce glut. Today, even a two income family would have a hard time getting by on the minimum wage. They certainly wouldn't be able to put much money aside for their future so you can kill off that Social Security system you dislike so much. While you're traveling around town, take a good look at those minimum wage, or near minimum age, workers. A growing number of them are middle age or older (not young kids). Many were pushed out of decent paying jobs by industry moving overseas and a growing glut in the workforce here. How are these people going to provide for their families and still put away money for the future?

> Both the Democrats and Republicans support continued
> immigration because they can read the writing on the wall.

Both parties support immigration because it provides direct benefits to them and/or their financial supporters. It provides no benefit to the American worker or American families. Indeed, it harms both of those.

> Only if in objecting they raise an alarm only over Hispanic,
> Asian and African immigrants.

They're the primary immigrants today, Dave. When talking about immigration, who would you rather I talk about - Aboriginal Australians?

> American machine holds runs $500.

And I've lived in Europe (Germany, Switzerland, Italy, and the UK) almost half of my adult life and worked for European companies for much of that time. While prices may be that high in Finland, what you say certainly is not the case throughout Europe. Taxes were never even close to that high and neither was the sales tax. As for your dishwashing liquid, I'm sure your imported liquid was fairly expensive, as are all imported products in any country. We paid more for our imported tea, but that doesn't mean there wasn't cheaper local brands on the store shelves. And, finally, if you paid that much for a washing machine, you got ripped off. We paid that much for stackable washer/dryer sets in both Germany and the UK. Either Finland has extraordinary prices or you need to learn how to shop better on the European economy.

> The cheapest car on the market, a Russian Lada (a Fiat clone)
> is $20,000. (snip)

Nonsense. Throughout Continental Europe, you can buy a BMW 315 or 318 for that price. The Fiat "duck" is only about $4,500 (my wife wanted one). While we were in Germany, we purchased a darn fast, and darn comfortable, French-made Citroen BX-19GT for less than $16,000 (loaded, with even air conditioning for those trips to Southern Europe).

> Why not just quit whining, Dwight?

Why not just quit listening, Dave?

>

It behooves all of us to be just as indignant about racism in any venue,
regardless of ethnicity of the racist.

That having been said, I can understand some of the seclusion each race
enjoys from others, IF the purpose is cultural. What is specific to a black
mayors conference are those things specifically related to black issues in
the community(ies) they represent. I am certain that if there were issues
that needed addressing in a "whites only" venue, then you'd see a white
mayors conference and, honestly, I am not so sure there isn't one. What we
may find generally attractive in a representative for the United States in a
Miss America, is totally different from what the Black/Negro/Colored

(depending on the part of society and geographical/historical perspective you come from) find in a representative specific to Black America.

I also don't see those things as racist and I am wondering if you really do. I mean, the "race" card--as its so affectionately come to be known--can be played anywhere. And, there are people just stammering to be offended, no matter what. I disregard them. I don't see that a all male organization is necessarily discriminatory, either. Do you? I would hope not and, if you do not, then why is there a problem for you with a all _____ (whatever race) organization? What about a sports organization that won't allow women? What about.....???

>it was spent on something else.

It's important to remember that the Social Security system doesn't just support retirees. Also, there is no "means test" - folks over a certain age get their SS retirement benefits no matter how much income they have, whether it be from investment or employment.

Another factor is that as our life expectancies increase, more and more people outlive their SS contributions. If you're in an mood to do a search or calculations, figure out the following hypothetical retiree:

- Current Age: 71
- SS contributions: Maximum required by law at the time, from age 22 to age 65
- Interest rate: 2.5%/yr

Figure out how much that person paid in over his.her working lifetime, and how much it would all add up to 6 years ago, when that person retired.

Then see how many years it will take that retiree to use up all of the money he/she paid in - with interest.

Then do the calcs agaib with an 81 year old.

>The problem isn't the number of retirees -
>it's the spending habits of this government.

Maybe. Some would say it't the taxing habits of the govt.

>Now it's time for this
>government to put that money back by cutting some of today's spending (a few
>less military weapons should do it) instead of supposedly trying to gather
>more people to collect taxes from.

You might want to look up where the military budget actually goes. A big
percentage of it is spent on pay and benefits to military personnel, retirees
and dependents.

And which weapons systems would you eliminate?
>
>> No, that isn't correct. Moving dirt is menial work. Lifting

Yep. All true - but it's not the whole story. There are lots of other factors
besides immigrants, such as:

- The decline in the percentage of unionized workers has made it possible for
employers to ease off on wages and benefits. This effect goes way beyond union
employees, because many employers will pay decent wages and benefits in order
to avoid becoming unionized.

- The influx of women and minorities into the labor force increases competition
for jobs and education. But it's better than discrimination!

- Many jobs have been exported to countries where labor is cheaper. Some big
companies have moved their customer service centers to places like India, the
Phillippines and Singapore, to name a few. Look inside your computer and see
where most of the components were made - it ain't the USA!

- Technology has reduced the number of unskilled and semi-skilled jobs, and
revolutionized the way much work is done.

When I first started in engineering, everything was drawn by hand, usually by
draftspeople who made a decent wage. Then came CADD systems, which at first
were very expensive and only used by large companies. Today hand drafting is
almost completely gone, and CADD systems are within reach of almost anyone with
a desktop. The draftsperson has been replace by the CADD operator, whose
productivity is much greater - meaning fewer of them are needed. Many CADD
tasks are done by designers and engineers themselves, too.

>Today, while business profits are astronomically high, working families are
>struggling to pay bills and cover their massive debts (while those business
>owners buy yachts and huge homes for their families).

SOME business profits are astronomically high. Others are struggling to survive. And don't forget ROI...

>And now, to add insult
>to injury, those employers financially support political candidates that
>will pass legislation to enable millions of immigrants to enter the country,
>creating an even larger glut in the workforce so business can pay even less
>wages and make even higher profits.

And people vote for those politicians because they're "pro-business".

>And if anyone objects to this massive
>immigration, they're called racist.

That depends on how the objection is raised.

If someone says that we need to limit immigration across the board, I don;t think anyone will call them a racist.

But if someone targets particular groups and points out that they have all or most of another continent....

>You can call me racist all you want - it
>certainly isn't going to stop me from speaking out against this nonsense.
>

>wealthy countries of Asia.

You might want to check into what the average person's standard of living is like in many of those countries - particularly when it comes to how much a house or car costs. Dave, K8MN has lived in many foreign countries...

>Why is it so impossible for this great country to
>do what other countries have already done - provide decent wages for
>workers, provide decent (not astronomical) profits for business, and keep
>market prices reasonable?
>
It's not impossible - the question is, what do you want to give up? Or should I Say - what are *we* willing to give up?

For example, tonight on NBC there is a popular half hour TV comedy whose 6 main characters are paid 1 million dollars each - per episode! Are we willing to give up the free market that makes such salaries possible?

Are we willing to give up low prices on imported goods and pay a lot more for American made things? Drive a smaller car, live in a smaller house, walk more,

fly less, own fewer things, make things last and last because we can't afford new ones?

Are we willing to have protectionist trade and labor policies and all that goes with them?

Lemme relate this to ham radio for ya.

I recall a time when imported amateur radio equipment was very rare here in the USA. Often it was disguised - the "Tempo One", sold by Henry Radio, was really a Yaesu FT-200. Many "Lafayette" items were imports. But most US hams used US-made ham gear.

And that equipment was expensive! Dig up an old catalog and see what a middle of the line station cost 25, 35, 45 years ago - and then adjust those costs to the income of an average family. Yes, there were hams with Collins gear - and just as many with much, much less.

In the early 1970s, imported ham gear began to take on the American market. The imported stuff was simply less expensive than USA-made equipment with the same features. Some old line US manufacturers got out of the amateur market, others fought on for a while, etc. One new manufacturer (Ten-Tec) made a go of it, but lags far behind Ikensu in total sales.

Now we have far fewer manufacturers of amateur equipment in the USA than 30+ years ago, even though the number of US hams is far greater. In the mid '60s, if you wanted a 100W class HF SSB transceiver that was "Made In USA", you could choose from Collins, Drake, Hallicrafters, National, SBE, and Heathkit, to name just the popular ones. Today you can choose Ten Tec or Elecraft.

Some say that American companies could not handle the transition to solid state, but the success of SBE (solid state in the early '60s) Ten Tec and rigs like the Drake TR-7 disprove that. The problem was simply economic - the Japanese could make ham gear of a given level of performance for less money.

Should the USA have enacted heavy import duties on electronics to protect the American manufacturers? Should American hams have simply refused to buy the imported stuff, no matter how good it was and how little it cost?
